Heads Forest Giant

Milton Joseph Foley, 49, this week was named president of MacMillan, Bloedel & Powell River Ltd., the new giant of the British Columbia forest industry. Combined sales of the two predecessor companies—MacMillan & Bloedel Ltd. and Powell River Co.—totaled nearly $235 million in 1958. Assets at mid-1959 had a combined book value of $294 million.

NATION'S BUSINESS

We Can't Afford To Lose Out Here

Will Canadian shipping have any part in the huge additional movement of iron ore due to build-up from Quebec's North Shore and Northwestern Ontario within the next couple of years?

Or will U. S. interests grab it all?

The answer would seem to be simple: That Canadian ships are entitled to a fair share of transporting Canadian raw material.

But getting the business isn't going to be as simple as that.

For one thing, contracts to build new ships for the job will have to be let very soon. And the U. S. interests involved will have the inside track with the U. S. companies buying the ore, and the U. S. shipping companies can get government subsidies.

At a rough estimate, some 40 to 50 new 20,000-ton bulk carriers are going to be needed to handle the seasonal shipments. They would cost up to $7 million each to build, with a million man-hours of work on each vessel.

A little simple arithmetic will show what this would mean to the workers in shipyards at Halifax, Quebec City, Montreal, Port Weller, Collingwood and Port Arthur, to the steel makers and the equipment manufacturers.

This would seem to be a case where Ottawa and the shipbuilding industry should get together as quickly as possible, to see what must be done to get a fair share of this business for Canada.

The Realities of Atomic Power

Atomic power is not going to be a competitively priced form of energy in most of Canada for a long time to come—perhaps not until the 1970s. Even the costs of building demonstrator plants are two to three times original estimates.

Atomic power development is not the simple process once envisioned. There are a score or more types of reactors being built in the world. Canada has invested heavily in one only. There is no guarantee that this will be the one to produce the most economic electricity.

Those are two of the rather bleak conclusions to be drawn from the First Canadian Conference on Uranium and Atomic Energy held this week in Toronto.

J. L. Gray, president of Atomic Energy of Canada Ltd., summed up the prospects this way:

> "Today no country and no person knows with any certainty what type of nuclear power plant will ultimately prove to be most attractive economically for any specific purpose or in any geographic locality. The conclusion upon which we can all agree is that the answer can be found only after years of operating experience under a variety of circumstances."

Where Is the Best Return?

But, confused as the prospects now are, there is little reason for Canada to make any sharp or sudden changes in atomic power policies. Officials of Atomic Energy believe evidence is mounting that Canada is on the right track with its natural uranium, heavy water reactors no matter what differing systems are being undertaken elsewhere. (See p. 18.)

It makes sense for Atomic Energy officials to press on with the type of reactor in which they have a multimillion dollar investment, if they are convinced it has a good chance.

At the same time it's to be hoped that they will not lose sight completely of the alternatives, some of which could be of more direct benefit to our uranium industry.

Of greater concern is the fact that Canada lacks any over-all long-term policy on energy. As B. C. Electric's energy expert John Davis points out, the world in general and Canada in particular won't run short of low-priced energy from conventional sources for a long time to come.

But now, while we have time, we should re-assess where we may get the best return on energy expenditures. Davis, for example, suggests it might be better to spend more on long-distance transmission lines, more on unlocking the vast amounts of energy tied up in Alberta's tar sands.

This is a complex, obdurate problem. But at least the Toronto conference has set the stage for Ottawa's forthcoming investigation of existing atomic power policies.

DOZEN PROJECTS

Chemical Plants Sprouting Again

Watch for new jobs, plants and products to emerge from these booming plans . . .

By W. L. DACK

The expansion and diversification pace of Canada's chemical industry is picking up again.

- **There are close to a dozen** new plant projects under way or definitely planned.
- **There are several** major hush-hush projects in the engineering stages that could make big chemical news this spring or early summer.

Most of the new projects represent first Canadian production of particular chemicals that will replace imported products mostly from the U. S.

Although proposed plant sites for the new projects range from coast to coast, Canada's Chemical Valley at Sarnia is getting the closest look by several major chemical firms.

Dow Chemical of Canada is reported to be studying a plant to make vinyl chloride at Sarnia.

This product goes into a broad range of plastic items, including rainwear, shower curtains, garden hoses.

Allied Chemical Canada is looking at plans for another sulphuric acid plant.

Practically every one of Canada's other major producers have new projects in the planning books.

Here are a few of the more recently announced projects:

▸ New plant for production of chlorine, caustic soda and potassium hydroxide at Trail, B.C. **(Consolidated Mining & Smelting).**

▸ Plant to produce liquid caustic potash at Cornwall **(Canadian Industries Ltd.).**

▸ Plant to produce sodium cyanide at Shawinigan Falls, Que. **(Shawinigan Chemicals).**

▸ A sulphur plant in Manitoba **(Border Chemicals).**

▸ Small plant to produce aluminum chloride for catalysts at Sarnia **(Clinton Chemicals).**

▸ Big chemical plant for production of various ammonia and nitrogen solutions and hydrogen at Brockville **(Sogemines Ltd.).**

▸ The West Coast's first phenol plant is being planned for Vancouver **(Dow Chemical of Canada).**

▸ Plant to make maleic anhydride being built at Ville De Salle, near Montreal **(Monsanto Canada).**

▸ Another plant to produce phthalic anhydride at Ste. Therese, Que. **(Reichhold Chemicals (Canada)).**

▸ New Maritimes plant to process seaweed into a number of chemicals.

Prices Rising In New Homes

By FORBES GILBERTSON

Watch out for price hikes in homes this year.

Cost of construction will go up, but it's too early to tell just how much or how soon prices will be affected.

What will help to keep any increases lower than might be expected is the fact that builders face a tough buyer's market.

Increases generally are on the way across the country, but they will vary considerably from area to area and, in metro areas, from suburb to suburb, depending on how sales are going.

It will be another month before the starts picture begins to shape up for 1960 and builders have a better idea of how the carry-over is being absorbed.

It could be two months or more before any price changes begin to show.

A Toronto area builder attending National House Builders Association convention in Toronto this week, claimed that where he was making about $350 per house a year ago, he's making much less now.

Other builders claim marginal profits compared to fatter days.

While attempts may be made to absorb costs where sales are slow, Mr. and Mrs. Home Buyer will pick up the tab in the end.

Any price hike will most likely be felt first in suburban areas of centres like Toronto.

No drastic increases in land prices are expected this year and some developers may try to absorb them without passing them along, **FP** was told.

If land keeps going up, especially in areas like Toronto, builders won't have a market at all, one prominent builder said gloomily.

- Many builders feel the 1½-story home is on its way out — temporarily at least.
- There's some indication that the two-story home is becoming popular again.
- There's no doubt about the strong gains made in popularity by split levels.

Another trend destined to grow rapidly in the next few years: Packaged operations.

What form this will take and how far it will go are not clear yet, but more and more prefabrication is on the way.

Walls will be prefabricated. Bathrooms and kitchens, etc., will be installed as completely packaged units. Flooring, instead of going down board by board or tile by tile, may be laid in 4-ft.-by-8-ft. units.

More and more subcontractors and manufacturers will prepare the different parts of the house sectionally, deliver them to the site.

The builder, in turn, will more and more become a highly-specialized assembler, financier and salesman.

This increasing specialization is going to mean more variety in homes and more ideas in what goes into them.

Use of new materials is going to increase gradually. Aluminum siding especially, builders predict, is going to be a big comer in the next five years.

All this, plus harder-than-ever-to-please customers, should mean more individualized homes.

The pre-installation of appliances, bought in volume by the

(Continued on page 8, col. 2)

U. S. Steel Settlement Sparks 'Impetus' Here

It won't take long for the inflationary effects of the U. S. steel settlement to spill across the border.

Already Canadian unions are talking about a "renewed wage offensive" in 1960.

For Canadian industry it could mean:

- **An eventual 4% to 5% increase in labor costs.** This will presumably be offset, to some extent, by increases in productivity.
- **New labor contracts** signed this year averaged between 8c and 12c an hour more in wage and fringe benefits.

The steel deal was worth about 40c in wages and fringes over 30 months.

"It gives our unions fresh impetus in the fight for higher wages," a spokesman for Canadian Labor Congress told **FP**.

Labor observers fear the "fresh impetus" may take the form of strikes, to break down any company or industry which even suggests wage restraint.

Here is one example:

"We are just about to begin our contract negotiations with the union," said the president of a Montreal firm producing plastic buttons.

"We are in a different country, working in a far different industry. Yet the U. S. steel settlement will have a profound influence on our talks."

November Exporting Burst May Cut Our Trade Deficit

By MICHAEL BARKWAY

OTTAWA (Staff) — An unusual November burst of Canadian exports, principally to the U. S., Japan and Western Europe, is going to help cut down our 1959 balance of payments deficit.

The balance of payments position had been running neck and neck with 1957, when our record deficit was $1,424 million.

Trade in real goods is now only the minor part of the excess of Canadian spending abroad.

Substantially larger: The deficit on transactions which don't involve moving goods across the frontiers — such as travel expenditures by Canadians abroad and Canadian payments to foreign investors for the use of their capital.

These "invisible" payments are certain to produce an even larger deficit than last year's $865 million.

They already came to $644 million by the end of September.

The last quarter's deficit on "invisibles" has not been less than $200 million since 1956; and it has grown each year. In 1957 it was $228 million and in 1958 $244 million.

This year it is sure to be higher still.

This is due to two factors:

- **The transfer** of dividend payments to parent companies from Canadian subsidiaries, which generally is high in the fourth quarter.
- **The payment** of interest on Canadian debt abroad, which is now beginning to be due on some of the newer loans bearing substantially higher coupons than earlier borrowing.

A better balance on commodity trade in the last quarter of 1959 will partly offset all this.

November was a surplus month for trade until 1953. But since then our November imports have always exceeded our exports until this year. (Details, p. 3.)

The balance in our favor in November 1959 was a relatively modest $10 million, but it compared with deficits of $49 million, $16 million, $96 million and $52 million in the preceding years.

December normally brings a surplus on commodity trade, but it isn't usually enough to offset the October and November deficits.

How Much Boom?

The Outlook

An FP roundup of the latest facts and expert opinion on the economic weather ahead . . .

By DALTON ROBERTSON

The high and rising level of business activity firmly predicted for this year foreshadows these developments:

▸ **Tight money and high interest rates.** Although the banks currently aren't as hard pressed for cash resources as they were a few months ago, they are still selective in their lending policies. When the expected upswing in industrial and commercial expansion takes place this spring, demand for bank credit will again become intense and borrowed money will command a steep premium.

And there's little likelihood of the Bank of Canada making it easier for the chartered banks to extend credit—unless the business expansion is completely free of inflationary overtones.

Governor of the bank James Coyne recently flashed a warning signal: "Real capital can only come into existence through the application of human labor to produce durable things, not by the multiplication of money or credit."

The implication: Heavy demands for credit won't bring about an increase in the money supply if these are likely to put pressure on supplies of manpower and materials—and so on prices.

The Bank of Nova Scotia predicted this week: "There seems

(Continued on page 8, col. 3)

BATTLE OF GIANTS

Automakers Declare War On Imports

They're out to slice 'independent' imports. Already compact cars make up almost 20% of total Canadian output, and GM is even bringing another smaller import of its own . . .

By RALPH YOUNG

This year will see a real battle of the giants in the Canadian automotive industry.

Stung by success of the imports, which last year took more than 26% of new car sales in the best year the industry has seen in this country, the big automobile manufacturers are wading in with production and model plans aimed at cutting down the imports—particularly the independents not affiliated with a U. S. manufacturer.

Compact cars currently represent almost 20% of total Canadian production.

Here's what's coming:

- **General Motors,** now hiring to step up its Corvair line to full production, shortly will put it on a two-shift basis; has added a two-door sedan to the Corvair line; will shortly introduce a new import to make Chevrolet dealers even more competitive, with a line of cars priced lower than Corvair.
- **Ford** has added station wag-

Japan Looks Solid Market For Western Canada's Coal

By LESLIE WILSON

OTTAWA (Staff) — A three-year $9 million coking coal contract with Japan is seen here as an almost certain outcome of negotiations to begin next month.

The beneficiaries: **Crowsnest Pass Coal Co., West Canadian Collieries and Canadian Collieries,** all in the Crowsnest Pass area.

The government is ready to adjust subsidies on this western coal so that the three companies can deliver it to Japanese ships at Vancouver at prices competitive with those of other supplying countries.

Japan is expanding steel production and needs an increasing supply of metallurgical coal of the Crowsnest Pass variety.

Two years ago, Japan took 3,000 tons of Crowsnest Pass coal, mainly to compare heating qualities with those of U. S., Russian and Australian coking coal.

Last year, Japan signed a five-year contract for Australian coal, price $10.20 a ton, Melbourne.

She also signed a one-year contract for 100,000 tons of our coal, price $10.25 and $10.30 a ton, Vancouver (**FP**, April 25).

The government set the Crowsnest Pass coal subvention at $4.50 a ton (up from $4) to enable the operators to make this price.

This contract was to expire Dec. 31. But Australians fell behind in coal deliveries and the Canadian contract was enlarged by 50% and extended to March 30.

Two government coal experts

Signs & Portents

WALL-SIZE color television programs may yet be dancing across your living room wall. New Swiss technique promises, for the first time, a satisfactory system for full-screen color projection.

* * *

SIGN OF THE TIMES: Flower wholesalers report booming holiday sales. Up at least 10%, says one across-Canada supplier. Available all year round now, chrysanthemums, carnations and gladiolus are more popular, but roses are still queens of the flower trade.

* * *

SUPERMARKETS may get an even greater employee-deserted look. U. S. firm plans to build and sell a device that will automatically compute grocery bills, "reading" fluorescent stickers on each grocery item as it moves along a traveling belt at check-out counters.

* * *

GARDEN OF METAL? A Russian author boldly predicts that man may grow and harvest "not fruit or berries, but metals", particularly rare ones. Plants accumulate tiny stores of metallic elements in their roots, stems, branches and leaves. Drive 'er Zeke. Gotta get the zirconium in before frost!

* * *

WOT NEXT? The British have developed a small single-seat private plane, based on a pre-war type, oddly named "The Wot". Two new versions are now available. One has a more powerful engine, the other has floats. In a splurge of punmanship the two are named "The Hot Wot" and "The Wet Wot".

First Staking Rush of '60 Hits Northwestern Quebec

By ALEX WILSON

News of the first of 1960's staking rushes dribbled down from frozen bush of northwestern Quebec this week.

Freeze-up is over. The new season is under way for Canada's mining industry. More about the moves, p. 43.

Solidly frozen lakes, rivers and winter roads are the pathways for another look and further development of promising properties found previously and for a first examination of new ground.

Interest focuses on northwestern Quebec, with these important highlights revealed this week:

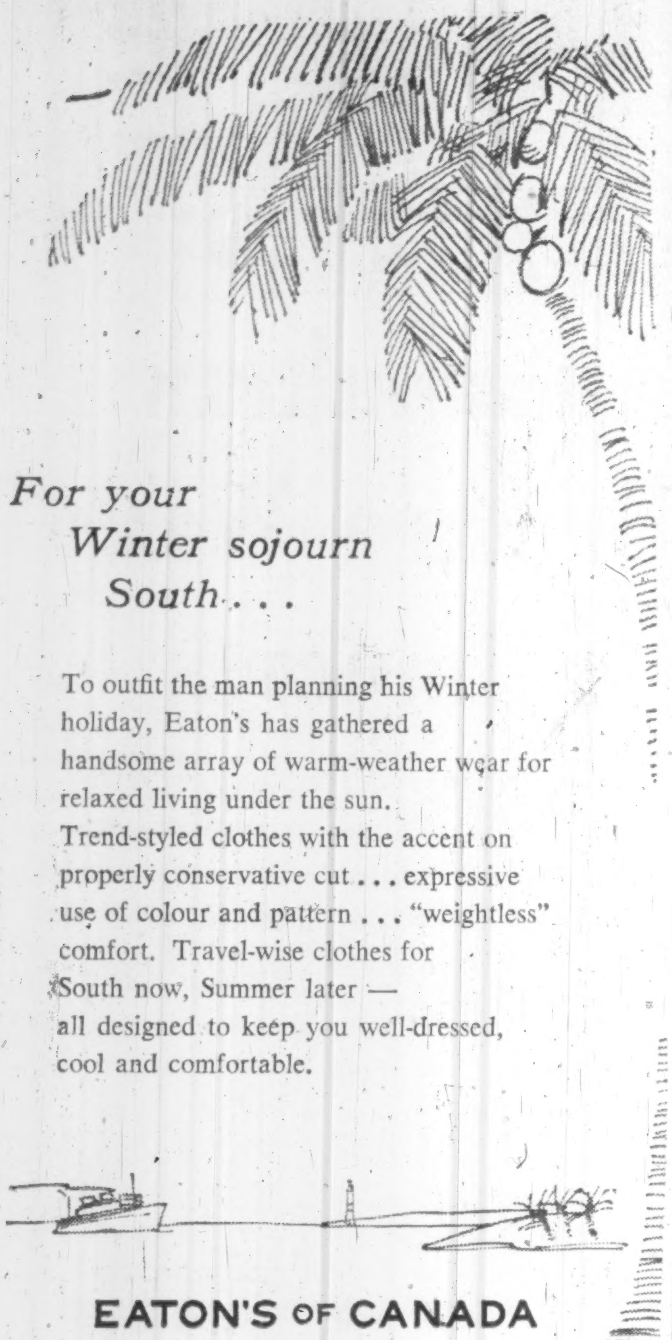
- **Mattagami Lake Mines,** the big zinc-copper-silver-gold discovery that is being run by **McIntyre - Noranda - Canadian Exploration** team, is going underground. John Barrington, McIntyre and Mattagami president, tells **FP** the key decision has been made to sink a shaft and carry out underground exploration.
- **The staking rush** in an area about 20 mi. north and west of Noranda, Que., where giant Noranda Mines has its big mining-smelting operations.

The rush is into three townships — Duparquet, Hebecourt and Montbray. Much of this ground, since it is fairly close to Noranda, has been checked.

But talk of a showing of copper-nickel mineralization stirred new interest.

Area Mines has held 35 claims partly under Duparquet Lake since last year and is planning ground surveys.

American Metal is reported to have taken over the surface showing and **Kerr - Addison, Ranworth Exploration** and **B. W. Lang** interests are also said in the area.



For your Winter sojourn South . . .

To outfit the man planning his Winter holiday, Eaton's has gathered a handsome array of warm-weather wear for relaxed living under the sun. Trend-styled clothes with the accent on properly conservative cut . . . expressive use of colour and pattern . . . "weightless" comfort. Travel-wise clothes for South now, Summer later — all designed to keep you well-dressed, cool and comfortable.

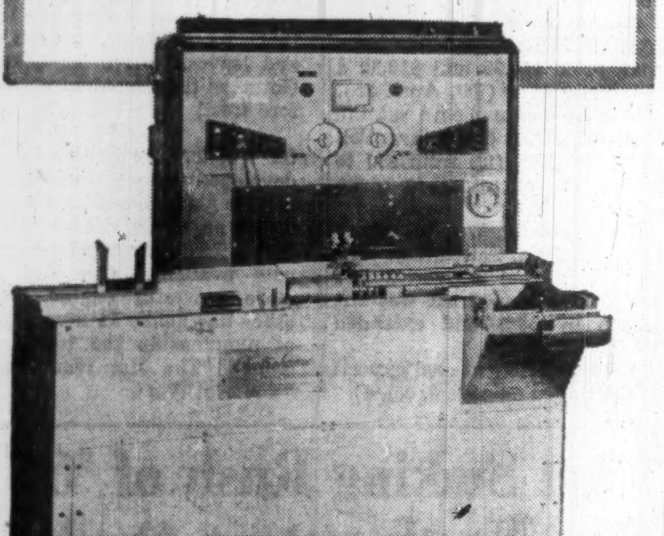
CASE HARDENING by INDUCTION HEATING



RADYNE

Radyne Model C240 Induction Heater fitted with an Electrohome Shaft Hardening Equipment.

Bearings, shafts, rocker arms, cams and many other components can be hardened rapidly and efficiently on an automatic production line basis with Radyne Induction Heating Systems. In addition, Radyne equipments are available for induction brazing, local hardening, annealing, hard and soft soldering and melting.

Electrohome Technical Products Division has designed and engineered many such systems for various industries over the past four years and the experienced sales engineering and service departments specializing in this work are available at any time for consultation. As a service to customers, samples are processed free of charge.

Ask for your copy of the booklet, "R.F. Induction Heating", it will be mailed immediately on request.

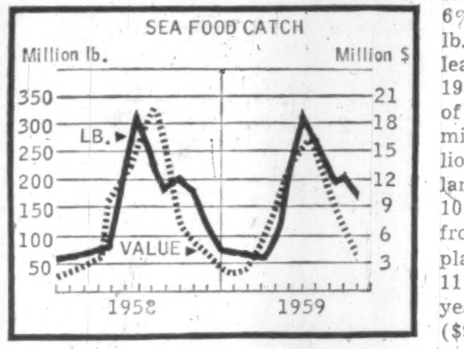
ETI

Trend of Business

Canada's fishermen caught 173 million lb. of sea fish and shellfish in November, down 6% from 184 million lb. a year earlier, leaving first 11 mos. 1959 total 2% ahead of year before at 1,775 million lb. (1,747 million lb.). Month's landed value dropped 10% to $4.3 million from $4.8 million, placing 11-mo. total 11% under previous year at $88.1 million ($98.7 million).



First export surplus since December, 1958, was recorded in November's external trade as sales ($499 million) exceeded imports ($490 million) by $9 million. But total purchases for first 11 mos. 1959 of $5,205 million—9.2% ahead of 1958's comparable figure—against a 4.8% rise in exports to $4,693 million leaves trade deficit for period at $512 million vs. year-earlier total of $288 million.

New motor vehicle sales rose 8.2% in October over like 1958 month to 36,495 units (33,728), lifting first 10-mo. sales 15.3% ahead of year before at 435,646 units (377,852). Retail value of month's sales was 9.8% higher at $111.6 million while 10-mo. total gained 15.7% to $1,338 million. In January - October period, 101,226 British and European vehicles were sold vs. 69,663 in like 1958 period.

Canadian auto plants turned out 3.8% more vehicles in 1959 than year before—368,925 units vs. 355,365, according to preliminary Dominion Bureau of Statistics figures. Passenger car output rose 1.6% to 301,749 units, while commercial vehicle production was 15.1% higher at 67,176 units.

More businesses fail. Business failures in the third quarter last year numbered 526, up nearly 28% from 412 in like '58 period. Estimated defaulted liabilities were almost double the previous year's figure at $20.1 million ($10.1 million). In the first nine months 1959, failures totaled 1,556 (1,526 the year before) with defaulted liabilities up 14% at $50.5 million ($44.4 million).

More pay for same work. Average hourly earnings in manufacturing rose to $1.74 in October from previous month's $1.72 and weekly wages to $71.64 from $71.13. Work week was unchanged at 41.2 hrs. Comparable figures in October, 1958, were $1.66, $67.52 and 40.8 hrs. Weekly wages in latest month totaled $78.78 in durable goods manufacturing, $64.75 in non-durable goods industries.

Electric energy output rose in all provinces except Newfoundland in November over year earlier to boost total generation 10.2% to 9,327 million kwh from 8,464 million. Total energy generated in the first 11 mos. 1959 amounted to 94,096 million kwh, a gain of 7% over 87,902 million in corresponding 1958 period.

Viau to Split, Create Preferred

MONTREAL (Staff) — Shareholders of **Viau Ltd.** will be asked at a meeting Jan. 22 to approve capital changes. The Montreal-based biscuit and confectionery firm plans to:

- **Change** the authorized 100,000 npv common shares into 400,000 shares of $2.40 par value.
- **Create** three million $1 par value preferred shares.

There will be 233,336 common shares outstanding after the change. In fiscal year ended Jan. 31, 1959, company earned $391,976 or $6.72 on the 58,334 common shares outstanding. Dividend rate of $3 was established with 75c quarterly payment Jan. 2, 1959.

Seldom traded, Viau sold in odd lots in 1959 in the $65-$70 range.

PR Guide Book For Insurance

A new book, Guide for Public Relations, is spearheading a public relations program just organized by The Insurance Institute of Canada.

Prepared by A. G. Wynne Field of the **General Accident Assurance Group,** Toronto, the Institute's chairman of public relations, the book will advise members of local institutes across Canada on how to publicize the part that the fire and casualty insurance industry plays in the economic life of the country.

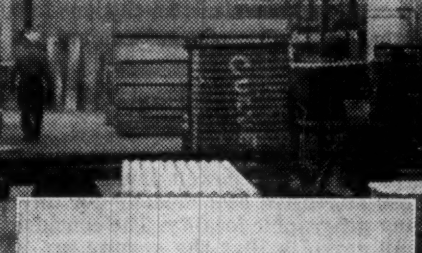
ARMCO A BETTER WAY TO BUILD



Armco Steel Buildings are delivered ready for fast, easy assembly

ARMCO STEEL BUILDINGS can meet your most exacting requirements

Inside, an Armco Steel Building looks like any other well-designed, well-built structure. Standard finishing materials—tile, plaster, wood panelling, or any other wall material you choose—can be used in Armco Buildings.

But actually, Armco Steel Buildings are easier and less costly to insulate, finish and keep comfortable. Here's why:

The steel panels of Armco buildings *interlock*, giving you solid weathertight construction. These STEELOX® panels are available only from Armco. They leave nothing to crack or break. And inside, they provide framework ready-made for the attachment of insulation and finishing material.

Armco has broken away from the traditional idea of steel buildings: *whatever* finishing materials you choose, you use. The look of an Armco Steel Building can be as varied as you want it. Armco buildings are warmer and easier to heat than many you could take twice as long to build; they're ready fast (whole panels go up at once); and every model is economical (because you don't have to put up extra wall framing).

Outside, the STEELOX panels of Armco Buildings are smooth and attractive—blend with masonry, glass or other materials. And they go up fast. Armco Steel Buildings give you a choice of clear spans from 5'4" to 120 feet. Lean-to and multiple combinations can provide important extra space.

Combine the economy of factory production with what *you* want for store, office, warehouse or plant. Armco Steel Buildings meet you all the way! Write to Armco in any of the cities below for complete information. FINANCING ARRANGEMENTS AVAILABLE.

To serve Canadians . . . ARMCO creates the finest steel construction products

Have We Really Started a Revival Of Export Trade?

OTTAWA (Staff) — Has Canada started a true revival of export trade?

The question is raised by November's highly unusual surplus of exports over imports, which followed ten months during which our exports showed a gain of about 3% over the previous year. (See Page 1).

Details of the November figures are not yet available. But the biggest increase in exports, as in the previous ten months, was to the United States.

In November alone we sold the United States $64 millions more in 1959 than in 1958. And in 11 months of 1959 the increase was $280 millions, or more than 10%.

A minor increase to the United Kingdom came to only $6.5 millions, and November accounts for all of it.

The rest of the Commonwealth and the group of other foreign countries all bought less Canadian products last year than in 1958.

How far then can the November spurt be regarded as the sign of a new, upward trend in exports? Does it indicate a new concentration of export trade on the United States?

Some of the big November increases are clearly identifiable as special cases. These include exports to U. S. of many steel products, including even pipes and tubes; and a marked boost in uranium sales, which is unlikely to be continued as the "stretch-out" of present contracts begins to take effect.

Included also is the government's sale of cut-price butter to the United Kingdom, and of some other dairy products.

The November wheat sales were about level with the previous year. But exports to some European countries — notably Belgium, France, and Italy — showed a surge after lagging all year.

On the 11 months all these countries took less Canadian exports than the year before. So did West Germany, which remained below 1958 even in November.

On the other hand the November increase included larger sales of non-ferrous metals, lumber, and paper products. Copper, nickel and aluminum led the metals parade. Newsprint and pulp and lumber all featured in the wood group.

These may well be regarded as more favorable signs, with a good prospect of continuing into 1960.

Some statisticians, dealing with seasonally-adjusted figures, see November as a definite turning-point.

They say that, when allowance is made for seasonal factors, the November increase in exports was larger even than it seemed; and they claim it ran through nearly all categories.

The dramatic swing, indicated by the November figures, from a deficit to a surplus position, also raises questions about imports.

There is very little evidence to suggest any change of trend here. On the first 11 months of 1959 Canadian imports increased by more than 9% over 1958; and, since prices were on the whole lower, this understates the increase in volume.

In November alone, imports were 7.4% above the previous year; while exports for the month were up by 22%.

A detailed breakdown of imports in the first nine months, which has just been published shows that they were spread across practically all categories of goods. Consumer goods increased at least as much as capital goods.

In this category, automobiles were prominent. But the increase in imports of finished vehicles, which would be mostly from overseas, was almost balanced by the increase in imports of parts, and these would be mostly from the United States — components to be used in the manufacture of Canadian cars.

Changes in the source of Canadian imports in the first nine months of 1959, compared with the same period of 1958, are shown in the following table released by DBS:

	January-September 1958	January-September 1959
	—($ millions)—	
United States	2,657.6	2,883.3
United Kingdom	388.2	439.5
Venezuela	155.1	152.2
Germany, Federal Republic	76.0	91.6
Japan	47.5	76.3
Arabia	47.6	52.8
France	26.1	43.9
Australia	21.8	31.6
Belgium and Luxembourg	22.5	31.3
Mexico	21.7	29.0

And the following figures show nine-months imports according to the most important commodities:

	Jan.-Sept. 1958	Jan.-Sept. 1959
	($ millions)	
Machinery (non-farm) and parts	404.5	441.5
Automobile parts	173.7	224.8
Farm implements and machinery	156.7	224.0
Petroleum, crude	201.1	208.8
Electrical apparatus n.o.p.	180.3	199.3
Automobiles, freight & passenger	115.9	169.6
Fruits	111.7	116.9
Rolling mill products	88.0	106.5
Engines and boilers	106.4	101.9
Petroleum products n.o.p.	88.0	89.9

Canada Still Holds Centre of Gravity Meters—That Is

Canada appears to be retaining its technical lead in the field of airborne mapping and geophysical exploration.

The latest development: A gravity gradiometer, claimed to be the world's first, owned by **Lundberg Explorations Ltd.**, Toronto.

The firm this week launched a campaign to convince geophysicists of the instruments usefulness with a display at an Arctic Symposium sponsored by the Albert Society of Petroleum Geologists in Calgary.

The instrument measures the vertical gradient of gravity, providing information said to be useful in:

- **The search for oil**, gas and minerals.
- **The determination of the true shape of the planet earth** necessary for the navigation of nuclear submarines, intercontinental ballistic missiles, and rockets.

Detailed workings of the instrument are kept secret.

"We have a proven instrument already in service two years in advance of any competition anywhere in the world and we don't intend to give them any help," a company spokesman said.

Hunting Associates Ltd. announced last month it has started to build an airborne gravity gradient measuring instrument and expect completion in two years (**FP**, Dec. 19, 1959).

Lundberg Explorations says it spent $500,000 over the last three years in developing the device.

In charge of marketing the Lundberg device is J. B. McClusky.

On conclusion of the display and flight demonstrations in Calgary, Mr. McClusky and other members of the firm will fly with the instrument to Houston, Texas, and New Orleans, Louisiana for further sales efforts.

The Canadian firm is just completing surveys with the instrument of about 90,000 sq. kilometers in Gabon and the Ivory Coast, French Community territories in Africa.

An earlier gravity gradiometer survey was carried out in the Gulf of Venezuela and offshore north to Curacao.

Since the South American survey, Lundberg Explorations claims to have improved the sensitivity of the instrument.

"We would have a good chance of detecting four million or five million tons of sulphide or magnetite ore under favorable circumstances," said McClusky.

The instrument is now being evaluated by the Department of Mines & Technical Surveys in Ottawa and in Sweden where a test area was flown.

Lundberg Explorations hopes to sell oil companies operating in Texas a basin-wide survey on a co-operative basis.

A partial survey has already been made of the area.

This state is the home of the inventor of the instrument, Boyd Boitnott. Lundberg Explorations assisted in its development and has international rights to its use.

The gradiometer is basically a sensitive electronic balance composed of two similar masses suspended on thin filaments one above the other. A variable condenser is located underneath the two masses.

When the instrument is flown over light or heavy geophysical masses, the masses change their position relationship.

This movement may be measured electronically to a hundred millionth of a centimeter, McClusky says.

The instrument weighs only 25 lb.

How New U.S. Trade Credit Will Affect Our Exporters

OTTAWA (Staff) — If the U. S. government implements present plans for insuring export credits, Canadian exporters will still have better short-term coverage from the Export Credits Guarantee Corporation, according to well-informed sources here.

The plan under consideration in Washington would put the export-import bank into a line of business which it has never handled before, it is understood. It would not necessarily require legislation.

The type of short-term export credit insurance which Washington seems likely to adopt, is one that no country in the western hemisphere, except Canada, has provided until now.

But it is available in most European and Commonwealth countries, 17 of which (including Canada) are members of the Berne Union of Export Credit Insurers (of which Canada's Hugh Aitken is this year's president). The Export-Import Bank is an additional associate member.

Nevertheless, the scheme contemplated by the U. S. administration — and believed to be favored by Treasury Secretary Anderson and Under-Secretary of State Dillon, if not by the Ex.-Im. Bank itself — would fall short of Canada's coverage.

The Export Credit Guarantee Corporation covers 85% of the credit-risk on all counts. It includes normal commercial risks as well as the political risk associated with exchange restrictions in the less developed countries.

The Washington scheme, as now contemplated, would cover only the political risk. Its term would be limited to 180 days. The price for 85% would be half of 1%.

Canadian exporters may pay a little more than this. ECGC's charge for this sort of coverage averages about 65% per $100. But it does give full coverage against commercial as well as political risks.

At present, 82% of ECGC's business is in insurance of this short-term character, with coverage for less than 180 days.

U. S. exporters have not had any corresponding coverage available either from private or government sources.

Until now the Ex.-Im. Bank would not cover any risk of less than one year. What it does do — which no Canadian organization will — is to grant actual credits (not merely guarantees) on capital goods exports for as long as three to five years.

Such credits are given on the same basis as ECGC's guarantees. Normally 20% of the price is required on delivery; and the government organizations will cover 85% of the remaining 80% — which is 68% of the whole price.

But whereas ECGC will only insure the credit, when a bank or private organization has agreed to finance it, the Ex.-Im. Bank will actually take over the foreign buyer's obligation in certain cases — though it may charge 6%.

This is the respect in which Canadian exporters have felt that they were less favorably treated than U. S. exporters. But U. S. exporters have long felt that they suffered, in comparison with the Canadians, because they could get neither credit nor insurance for less than one year.

The proposed extension of the Ex.-Im. Bank's function will fill a large part of this gap for U. S. exporters. But, as now contemplated, it still will not give them the insurance against commercial risks in foreign countries which Canadian exporters can get as a matter of course from the ECGC.

Red China Quits Aluminum Deal, But Alcan Bustles

MONTREAL (Staff) — Although it has apparently lost its most controversial customer — Red China — **Aluminum Co. of Canada** continues hurriedly to boost its production rate.

Alcan says it expects average 1960 operating rate at its Canadian smelters (capacity 770,000 tons annually) to be 87%. This should mean output this year of 675,000 tons compared with 520,000 in 1959. Operating rate in recent months has risen from 500,000 to 595,000 tons (**FP**, Dec. 12).

Demand has risen "faster than expected." There is further potential for fast increase as the U. S. economy speeds up following the steel labor settlement.

Meanwhile Red China has quietly dropped off from the list of buyers. It had been expected to take some 5,000 tons of ingot from Alcan last year (**FP**, Nov. 28). Actually: Fewer than 3,000.

Canadian ingot stopped moving to mainland China reportedly after the Reds asked for certain special terms from Alcan and parent **Aluminium Ltd.**

Alcan, in view of firming markets, said no.

At the moment there is apparently no indication that this business will be resumed. Alcan, however, continues to ship ingot behind the Iron Curtain in Europe.

About a year ago Alcan turned down a Red Chinese bid for aluminum because it was nervous about reaction in the U. S., one of its big customers. Later, small shipments were made at accepted world prices which since have been increased.

Another indication of the fast improvement in markets is the report that Aluminium Ltd. sales in 1959 hit about 635,000 tons or 10% higher than 1958.

Although any Alcan decision on expanded capacity presumably is some time in the future, rapid growth is possible.

About 80,000 tons of potential capacity now in mothballs at Kitimat could be put into use within four or five months.

Another additional 40,000 tons at Kitimat and a substantially larger amount in Quebec could be provided within up to 18 months of a decision to expand. Necessary power and alumina capacity is available.

West Coast Export of Oil Seems to be Perking Again

From Our Own Correspondent

VANCOUVER — The oil export picture on the West Coast seems to be brightening.

Trans Mountain Oil Pipe Line reports its deliveries throughout 1959 averaged 98,239 bbl. of crude per day — a jump from 81,003 bbl. in 1958.

These deliveries cover, consumption by both B. C. and Washington refineries, but growing export volume is a decided factor.

Another promising statistic — scheduled deliveries for Trans Mountain this month are expected to average 132,000 bbl. daily.

This compares with 105,552 bbl. in December, and 75,301 bbl. December, 1958.

The figures, however, are still below the peak year of 1957 when daily deliveries averaged 154,900 bbl. as U. S. Pacific Northwest refineries and even California refineries, bought Canadian oil heavily as a result of the Suez crisis and a resultant cut in Middle East oil supplies.

The 1959 deliveries were third highest in the seven years the $143 million pipeline has been operating, although it operated only part of the year in its first year, 1953.

Trans Mountain carries crude from oil fields near Edmonton across B. C. to the Greater Vancouver market, and to Sumas, step-off point for exports to Washington state.

B. C.'s own northern oil fields soon will be tied into Trans Mountain via a new pipeline from the Peace River district, across the border into Alberta.

Trans Mountain's second best year in terms of deliveries was 1956 when they averaged 129,100 bbl. per day.

Trans Mountain's deliveries to the U. S. have fluctuated considerably as U. S. policy toward foreign oil imports changed, but its deliveries in B. C. have risen steadily with population growth.

A big new **British American Oil** refinery at Vancouver was a new customer this past year.

Deliveries to Washington refineries in 1958 were 24,572 bbl. a day, about 30% of the total, versus 74,230 bbl. or about 48% of the total in 1957.

Deliveries to B. C. refineries were 56,431 bbl. a day or 69% of the total in 1958, compared with 61,097 bbl. or about 39% in 1957.

Standard Paving Net 6.2% Lower

Consolidated net profit of **Standard Paving & Materials Ltd.** for the six months ended Sept. 30, 1959, was $995,633 or 97c per new common share.

This was 6.2% lower than net of $1,061,793 or $1.04 a share in the first six months of the previous fiscal year.

"There is always difficulty in appraising our earnings for the first six months of our fiscal year, due to the instability of our construction division to determine actual results on construction projects until their completion," a spokesman said.

Because of seasonal factors, much of company's earnings are generated in the April-September period. Net profit for the full fiscal year ended March 31, 1959, was $1,229,560 or $1.20 per new common share.

Foresters Elect Fred L. Flatt

Fred L. Flatt of Kapuskasing is new president of the Ontario Professional Foresters Association.

He succeeds Dr. J. W. B. Sisam of Toronto who is dean of the University of Toronto's faculty of forestry.

FLATT

Mr. Flatt is resident mill manager of **Spruce Falls Power & Paper Co.** He joined the firm's woodlands division in 1931 following graduation from University of Toronto.

He has worked on all phases of woods operations, was named woodlands manager in 1952 and mill manager in 1957.

Mr. Flatt last year was vice-president of the association which was formed in 1957 to maintain standards of forestry practice among members of the profession.

J. W. McNutt has been elected vice-president of the association.

VISITORS ASK
"What does it cost to work here?"

This bit of whimsy reveals a happy truth about Flick-Reedy Corp., a large air and hydraulic cylinder manufacturer near Chicago. It is a wonderful place to work. This 222,000-sq.-ft. Butler building and surrounding grounds include:

—A magnificent swimming pool for employees, their families and the community—complete with poolside tables and chairs in rich decorator colors.

—An auditorium-gymnasium where employees can enjoy shuffleboard, volleyball and ping pong during off hours.

—Lagoons stocked with fish, where anglers can while away leisure hours. The lagoons, like the pool, are also part of an ingenious water supply system which, combined with Butler fire safety, gives Flick-Reedy an extremely favorable insurance rate.

—Light, pleasant production and office areas. Butler's great structural strength permitted the installation of glass between these areas, rather than heavy load-bearing masonry partitions. The effect is both a visual and psychological atmosphere of all working toward a common goal.

Does all this cost a fortune? No! Frank Flick, president, says the savings in initial construction, heating, insurance and maintenance afforded by the Butler system of building helped them get many outstanding features that would have been beyond reach with any other type of construction.

Your Butler Builder (see Yellow Pages under "Buildings, Steel" or "Buildings, Prefabricated") can build this kind of plant for you. Ask him about the new Butler buildings, with two superior wall and roof systems—now available in six beautiful colors. Ask about Butler financing, too.

Should Non-Voting Common Be Abolished in Canada?

By PAUL S. DEACON

THE OFFER of **Shell Oil Co. of Canada** for **North Star Oil Co.** shares is coming under fire from some sections of the financial community.

The offer, expected to be extended to all shareholders shortly, is $34.25 per common share and $19 per class A share.

"This is sheer injustice to the A shareholder," a letter to **FP** this week contends. "The A shares participate equally in dividends with the common and in a distribution of assets on a winding up. At a very conservative estimate, there is approximately $28.00 per share in assets behind each A share . . . Up to six months ago, the A always sold higher on the market than the common."

The opposition to the Shell offer is understandable on these grounds.

Nevertheless, the situation is more a product of the type of capital set-up than of unwillingness of a buyer to pay what shareholders consider a fair price.

The class A shares have no vote, but they have a 60c cumulative preferential dividend and share equally in dividends with the common after 60c has been paid on the common (no common dividends have been paid).

Control of the company was held by the late Fred C. Manning of Halifax, through his ownership of a large block of North Star common. Because this block of common represented the major voting power, it was the key to any attempt to buy the company. Shell was the highest bidder among several, and the Manning estate accepted the bid both for its common and for its less important holdings of class A stock.

The price of $19 a share for the class A stock is equal to its high since it was the first listed back in 1957. Its low was $12¼ in 1958. It traded as low as $13 in September this year.

A firm making a bid could have offered more for the class A, but presumably this would have reduced the price it could offer the Manning estate for the common.

If it wanted control, it was essential to make the bid as attractive as possible to the estate, and if it wanted all the common, to other voting shareholders.

Therefore, if it had calculated what it considered was an appropriate over-all price for the company's assets, it would naturally place a limit on what it would be able to pay for the class A.

Investment men who object to the payment to the class A nevertheless admit that the over-all purchase price of $38 million is completely fair.

The controversy over the A stocks offer raises a bigger issue, however.

In the North Star case, the class stock has quite clearly many attributes of a preference stock. Normally, preference shareholders do not expect much more than the par value of their stock in case of redemption. The North Star A has no par value, but its preferential position suggests that its holders wouldn't expect it to be treated as a common.

There has been a growing feeling among some investment authorities that all non-voting common shares should be abolished. The New York Stock Exchange, for instance, has not permitted for many years the listing of any non-voting shares of any description. A wave of non-voting common issues in the U. K. has led to demands there that these be prohibited.

There are many stocks in Canada today which give the holder no significant preference over the voting common but still deny him a vote. There are even common shares which carry more votes than other common shares.

The existence of these non-voting shares which have limited preference and which are subject to most of the risks inherent in ordinary common stock, invites the type of situation that has arisen with North Star.

The investment dealers must accept some share of the blame. The non-voting shares were in most instances created to allow a smaller amount of stock to retain voting control of the company.

In the North Star case, the class A shareholders have the right to refuse the offer. Some investment men say they are advising their clients to do just this.

But one can hardly blame the buyer for acting in the light of what actually exists, not what should have been.

New Dissidents' Letter In N.S. Hardware Fight

MONTREAL (Staff) — More fuel for argument is being tossed into the proxy fight for control of **Thompson & Sutherland Ltd.**, the Nova Scotia hardware chain.

This week A. Scott Fraser, Montreal, leader of the dissident stockholder group, circulated a second letter to shareholders.

It was in reply to a letter, under signature of a majority of present directors, sent out by the company Dec. 28 defending management.

Fraser's main points in summary:

- **The company has presented** no reorganization plan.
- **Under the dissidents' proposals,** control of the company would not leave Nova Scotia.
- **Resignation of C. H. Sutherland as president of the company** could result in his remaining a director and "the power behind the scene".

The company letter (**FP**, Jan. 9) informed shareholders that management was preparing a reorganization plan and that C. H. Sutherland was intending to resign as president.

It also questioned qualification of Fraser and his associate to operate a merchandising business, suggested that under Fraser's plan control of the company would pass into Montreal hands, and charged that the dissidents' plan would involve payment by the company of $160,000 in extra taxes.

The dissidents (**FP**, Dec. 2) are seeking control to reorganize the company, implement proposals to "improve efficiency" and distribute to shareholders a "minimum of $30 per share" out of retained earnings.

Dissidents take the position that company has about $1.2 million or $86 per share in funds over and above funds required to carry on the business.

"Our basic plan . . . is to distribute at least $30 per share. We will then arrange a capital reorganization that will be beneficial to all shareholders and improve the earning power of the company to the best of our ability.

"Our argument is not with the managers and staffs of the stores. It is with the directors in North Sydney and Sydney who, year after year, have ignored the normal rights of shareholders in public companies," Fraser says in the letter to shareholders.

In a memorandum attached to the letter, Fraser notes, "if the tax payable (under the dissidents' reorganization plan) is $160,000, the amount that can be distributed to shareholders is approximately $907,000 (or $65 per share).

"We propose to distribute immediately a part, but not less than $30 per share tax free through issuance and redemption of preferred stock. The $160,000, or 15%, is instead of shareholders paying income tax. The balance can be distributed later without additional tax.

The letter also defended qualifications of Fraser, his associate Jarislowsky and their company, **Jarislowsky, Brown, & Co.**, a Montreal investment counsel firm specializing in corporation analysis.

Waterloo Names Justice Porter First Chancellor

Hon. Dana Porter, Chief Justice of Ontario, has been named first chancellor of the new University of Waterloo.

The university, at Waterloo, Ont., received its university charter recently.

Former Ontario cabinet minister, the new chancellor will serve a term of six years.

PORTER

Born in Toronto, he was graduated from University of Toronto in 1921, began practising law in Toronto in 1926 and entered provincial political field in 1943.

His appointment was announced by Ira G. Needles, chairman of the Waterloo board of governors.

Insurance, Small Loans Boost Industrial Acceptance Profit

MONTREAL (Staff) — **Industrial Acceptance Corp.** earnings available for common shares in 1959 were probably about the same as in 1958, according to President J. H. Ranahan.

Earnings available for common stock in 1958 were $9.8 million. Net profit was $10.7 million and preferred dividends $906,000.

Ranahan also told the Security Analysts' Association of Toronto this week:

- **There are many new fields** which the big credit company and its subsidiaries can develop over the long-term. This year should see a higher volume of business.
- **A growing portion of earnings** is being provided by subsidiaries (**Niagara Finance Co.** (in the personal loan business) and **Merit Insurance Co.**

These two subsidiaries contributed 31% of total earned income in the first three quarters last year compared with 26% in corresponding 1958.

Ranahan said the company was subject to substantial growth in competition. But he said he was sure IAC would "continue to enhance its position in its field".

On the effect of rising money costs, he said that interest on all IAC notes was $11.5 million and debenture interest $2.5 million in 1959's first three quarters. Together they were up $2.6 million from corresponding 1958.

Debenture Issue Planned by IAC

MONTREAL (Staff)—An issue of $10 million 6¾% 20-year debentures of **Industrial Acceptance Corp.** is expected to be offered shortly by **Greenshields & Co.**

Price will be 99 to yield 6.84%, **FP** understands.

Debentures are non-callable for refunding purposes for the first 12 years. Call price is 105 3/5 to 1961, the premium reducing 35c annually to par in 1977. The issue matures in 1980.

Under provisions of a purchase fund which will operate 1961 to 1979, company will purchase annually 4% of the principal amount of debentures issued if available on the open market at issue price of 99 or less.

High Yields from Government Bonds

Long term Government Bonds may now be purchased at prices to yield over 6%.

From the following list of Canada guaranteed bonds and Provincial and Provincial guaranteed securities, investors may select maturities for their individual requirements. We offer as principals.—

Appeal Dropped In Liquor Case

From Our Own Correspondent

SAINT JOHN — A notice of appeal by the **Chateau Restigouche Hotel** of Campbellton, against a conviction under the New Brunswick Intoxicating Liquor Control Act, has been abandoned.

The conviction was recorded Nov. 14, 1959.

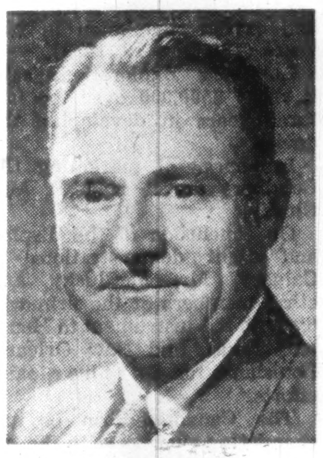
J. C. Van Horne, M.P., and counsel for the hotel, had appealed and a hearing was scheduled for Feb. 2 in Restigouche County Court.

Magistrate J. T. Troy fined the hotel $1,000 plus costs. He found the hotel guilty of a violation under charges brought following an RCMP raid in mid-September.

Crown Counsel Donald M. Gillis said he was not surprised that the appeal was abandoned.

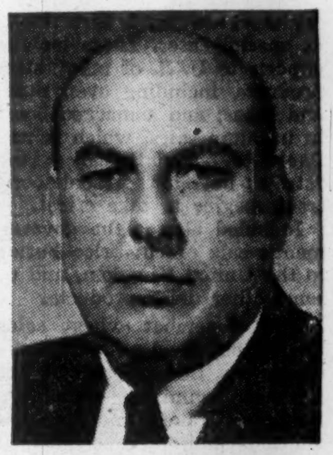
ANNOUNCEMENT

LOBLAW EXECUTIVE APPOINTMENTS



EDWARD DAVIDSON

WILLIAM W. LAIRD, Q.C.



FRANK W. MORLEY

Mr. George C. Metcalf, President, Loblaw Groceterias Co. Limited, is pleased to announce the following executive appointments:

Why They're Moving

Facts and comment on what's going on in the market and rumors behind some of the moves.

By P. T. DURRANT

Industrial stocks on both Canadian and U. S. markets retreated on a broad front in early trading this week. At midweek the Toronto Stock Exchange industrial index was down 12 points from a week earlier, placing it slightly below the level of a year ago. The Dow-Jones (N.Y.) index of 30 industrials dropped 25 points in a week; however, it is still 12% above a year ago.

Stocks of two oil companies highlighted activity on the Toronto board last week. Announcement that **Shell Oil Co. of Canada** had made a successful bid to buy controlling interest in **North Star Oil Co.** sent that company's common shares soaring $10¾ to $33¼ (1959 high— $24⅛). The class A shares moved up $1¼ to $18¾ (1959 high—$19). At mid-week, the common was selling at $33⅝, the class A at $19¼.

Shell's offer, to be made to all North Star shareholders, is $34¼ for the common, $19 for the class A shares. On the basis of 403,983 class A and 864,654 common shares outstanding, the offer involves almost $37.3 million.

Stock of **International Petroleum** jumped $10⅛ to $42⅛ on turnover of 125 shares following offer by **Esso Standard Inter-American Inc.** to buy all outstanding common shares at $45 U. S. per share. Recent price: $42. Esso Standard's parent **(Standard New Jersey)** already controls about 97% of International's stock.

Announcement of a rights offering to common shareholders of **Hahn Brass Ltd.** sent the stock up to $13 this week from the last 1959 sale (Dec. 9) at $10¼. Company's new shares (they were split two-for-one in November) have traded infrequently since listing. The old stock sold in the $21-$15 range last year.

Shareholders of record Jan. 18 will be given the right to buy one additional share at $10 for each 10 shares held. Rights expire Feb. 22. If all rights are exercised, 10,000 new shares will be issued, adding $100,000 to company's treasury.

Hahn earned $1.45 per common share (adjusted for split) in fiscal year ended June 30, 1959. The annual report noted that company intends to resume cash dividends on the common beginning with the first quarter, 1960. Last quarterly payment on the old common was 25c per share on Oct. 1, 1958. In 1959, holders of the old common received stock dividends in the form of two 5% second preference shares, $10 par, for each five shares held.

* * *

Stock market outlook for 1960 is for broadly the same basic movement as was experienced in 1959, **Nesbitt, Thomson & Co.**, Montreal investment firm, says in a brochure, "Economic and Investment Review—1960".

The investment firm includes these stocks in a list of suggested common share investments: **Abitibi Power & Paper** (recent market price—$39⅜), estimated 1959 earnings, $2.50 per share vs. $2.19 in 1958; **Algoma Steel** ($39½), $3.00 per share vs. $2.05; **Aluminium Ltd.** ($32¾), 75c per share vs. 74c; **B. C. Power Corp.** ($37⅛), $2.75 per share vs. $1.95; **Canadian Industries** ($16½), 85c per share vs. 58c; **Dominion Tar & Chemical** ($15½), $1.65 per share vs. $1.40; **Industrial Acceptance** ($36¼), $3.60 per share vs. $3.59; **Shawinigan Water & Power** ($29½), $1.40 per share vs. $1.62; **Simpsons Ltd.** ($32¾), $1.48 per share vs. $1.53.

Trans-Canada Pipe Lines has dropped to $24⅜ from $26 at beginning of year. Company incurred a loss of $1.24 a share in the first nine months of 1959, compared with profit of 11c in the full year 1958. Natural gas sales in the final three months of 1959 were 25,356,000 mcf, up 92% from 13,189,000 mcf in fourth-quarter 1958. Maximum day sales in the quarter just ended were 359,000 mcf Dec. 22; comparable peak a year earlier was 225,000 mcf Dec. 30, 1958.

* * *

Stock of **Cockshutt Farm Equipment** jumped $2.50 to a 1959/60 high of $22⅝, later eased to $21⅛. Action was sparked by a report that company is holding discussions with three unidentified U. S. companies in a move to gain wider distribution for its products in the U. S. One rumor was that sale of control to a U. S. firm was under discussion. Previous rumors concerning Cockshutt have suggested a possible offer by German interests at a price of $24 per share or better. Company officials have encouraged suggestions that it would entertain offers.

Profit for fiscal year ended Oct. 31, 1959, was the highest since 1953, with earnings of $1.67 per share compared with 13c in 1958.

Canadian Drawn Steel stock at recent price of $17½ is up from year-end close of $14¼. (Range in 1959: $15-$12). Market price touched $18 this week on sale of a less-than-board lot. Only 900 shares have traded in the current advance.

Sales and earnings in 1959 were better than the year before, **FP** understands. Backlog of orders is at about the same level as a year ago and outlook for 1960 is said to be good. At recent market, the stock is selling at 12.6 times 1958 earnings of $1.39 per share, yielding 3.71% at indicated annual dividend rate of 65c per share.

Studies by **MacMillan, Bloedel & Powell River Ltd.** on a proposed newsprint mill in Arizona are continuing, **FP** is told. Work is proceeding on testing wood species, availability of supply and possible arrangements with the U. S. Forest Service. Present estimated capacity is 60,000 tons annually.

Recent price of company's stock ($17¾), is down from $18¼ a week ago. **MacMillan & Bloedel** class B stock continues to trade in the $41-$42 range.

A flurry of activity in stock of **S.K.D. Manufacturing** followed issue of company's annual report. Total of 20,975 shares changed hands last week in the $2.00-$2.65 price range. In the first two days this week, 5,410 shares were traded. Recent price: $2.35. The stock traded between a high of $2.55, a low of $1.10 last year; in the final week of December, only 155 shares turned over at $2.10.

Company earned 19c per common share in fiscal year ended Sept. 30, 1959. Sales booked for 1960 are running 15% ahead of 1959. However, lower prices may reduce profits, company says.

Dow Brewery shares have remained steady at around $45 since announcement of increased earnings ($4.45 a share vs. $3.79 a year ago) and purchase of property in Toronto and Montreal for future expansion. Present Quebec plants are at Montreal and Quebec City. Company's Ontario plant is at Kitchener.

Rubber Imports 'Hurting Badly'

Imports of rubber footwear into Canada are hitting the domestic industry as never before in its 100-year history.

That's the way John Falconer, newly-elected chairman of Canadian Rubber Footwear Information Office, sums up the industry's performance in 1959.

"When figures for full year are available, 1959 will have been the worst year in our history," he says.

Imports of rubber-soled canvas wear in first nine months jumped 58.9% over same 1958 period to grab off 66.7% of the Canadian market, he says.

Incoming waterproof rubber footwear — backbone of the industry — increased 102.7% capturing 31.4% of the market here, has trebled in two years.

The reason is solely price, as a result of differing labor costs, Mr. Falconer says.

B.C. Imposes 'Conditions' On Magna Deal

From Our Own Correspondent

VICTORIA—Natural gas will flow to Vancouver Island, by submarine pipeline, in 1962.

The British Columbia government has endorsed the application of **Magna Pipeline Co.**, to build a unique flexible pipeline under the Gulf of Georgia, giving it the go-ahead over the other applicant, **Island Transmission Ltd.**

But the B. C. government attached some stringent conditions to the Magna go-ahead:

By May 1 of this year, Magna must have a firm contract with the U. K. pipe manufacturer; a firm contract with **Westcoast Transmission,** the big-inch pipeline that brings gas down from the northern Peace River district to Greater Vancouver and the U. S. West Coast, for a supply of gas; and it must file financing details with the government.

As well, stipulates the government, the line must be finished by June 30, 1962.

Island Transmission had proposed a conventional steel pipe. Magna chose the flexible type because the B. C. coast is in an earthquake zone.

Magna's project will cost $14 million, and **B.C. Electric Co.** testified at the hearing it would build a $12 million distribution system in Greater Victoria when gas reaches the island. Magna would sell the gas to B.C. Electric on the island at 60c per 1,000 cu. ft.

Ralph Farris, president of Magna, is a principal of **Northern Ontario Natural Gas.**

Molson's Sales Increase In Last Quarter of '59

MONTREAL (Staff) — **Molson's Brewery Ltd.** continues to press its plans for an integrated national marketing and production set-up.

Following its acquisition of Western Canada's **Sicks' Breweries Ltd.** in latter 1958:

- **The former Sicks' brewery** in Vancouver has recently begun producing one Molson's brand (export ale) and soon will start on another — the newly offered Canadian Lager.
- **The latter is especially suited** to the national trend toward lager beer-drinking — as opposed to ale—and also to Western Canadian markets, which are virtually monopolized by lager beer.
- **Plans to produce Molson's brands** in Prairie Provinces breweries are hindered by provincial quota controls. However, these brands eventually will be turned out in Saskatchewan and Alberta.

Shareholders attending the annual meeting last week were told:

Company plans some $4 million in capital expenditures this year, following about $36 million from 1946 to 1959; sales in the first quarter of the fiscal year, beginning Oct. 1, increased from levels the year before.

"This is particularly satisfactory in that our sales volume increased at a rate greater than the total industry volume in each of our major marketing areas" (Quebec, Ontario, Western Canada).

President H. deM. Molson said there was in the brewing industry the tendency for "some companies" to become larger. He said this was caused by intense competition and had resulted in greater efficiency.

The latter had made it possible "to maintain the price of beer at a low level in the face of . . . steeply rising costs."

Net profit in the year ended Sept. 30, 1959 totaled $6.7 million ($5.2 million the previous year), a 29% increase over the 1958 total and 89% above the 1949 level.

In a table comparing performance of individual breweries in the Jan. 2 issue, **FP** inadvertently inserted the 1958 and 1957 Molson net profit totals for the 1959 and 1958 results. The per cent change figures were shown correctly, however.

Note

By VINCENT EGAN

FOR THE FIRST time in some weeks, the bond market appeared to be improving this week. One indication was the action of last week's City of Montreal 20-year bonds, which rose a full point from the issue price of 90.83 (yielding 6.85%). Another was the recovery in the 5¾% **Canadian National Railways** bonds of 1984, which bounced back to 96 from last week's low of 94½ bid.

* * *

Biggest new issue under discussion this week is $10 million 6¾% 20-year debentures of **Industrial Acceptance Corp.**, which is expected to be offered to the public shortly by **Greenshields & Co.** at 99 to yield 6.84%. Debentures have a 12-year non-call feature.

* * *

A new borrowing by **Steinberg's Properties Ltd.** is expected. An unconfirmed rumor suggests a coupon rate of 6¾%.

* * *

In the U. S., underwriters have registered a Province of **New Brunswick** $15 million 25-year sinking fund debenture issue, non-callable for 10 years. It is rumored that a 5⅜% interest rate is under consideration.

* * *

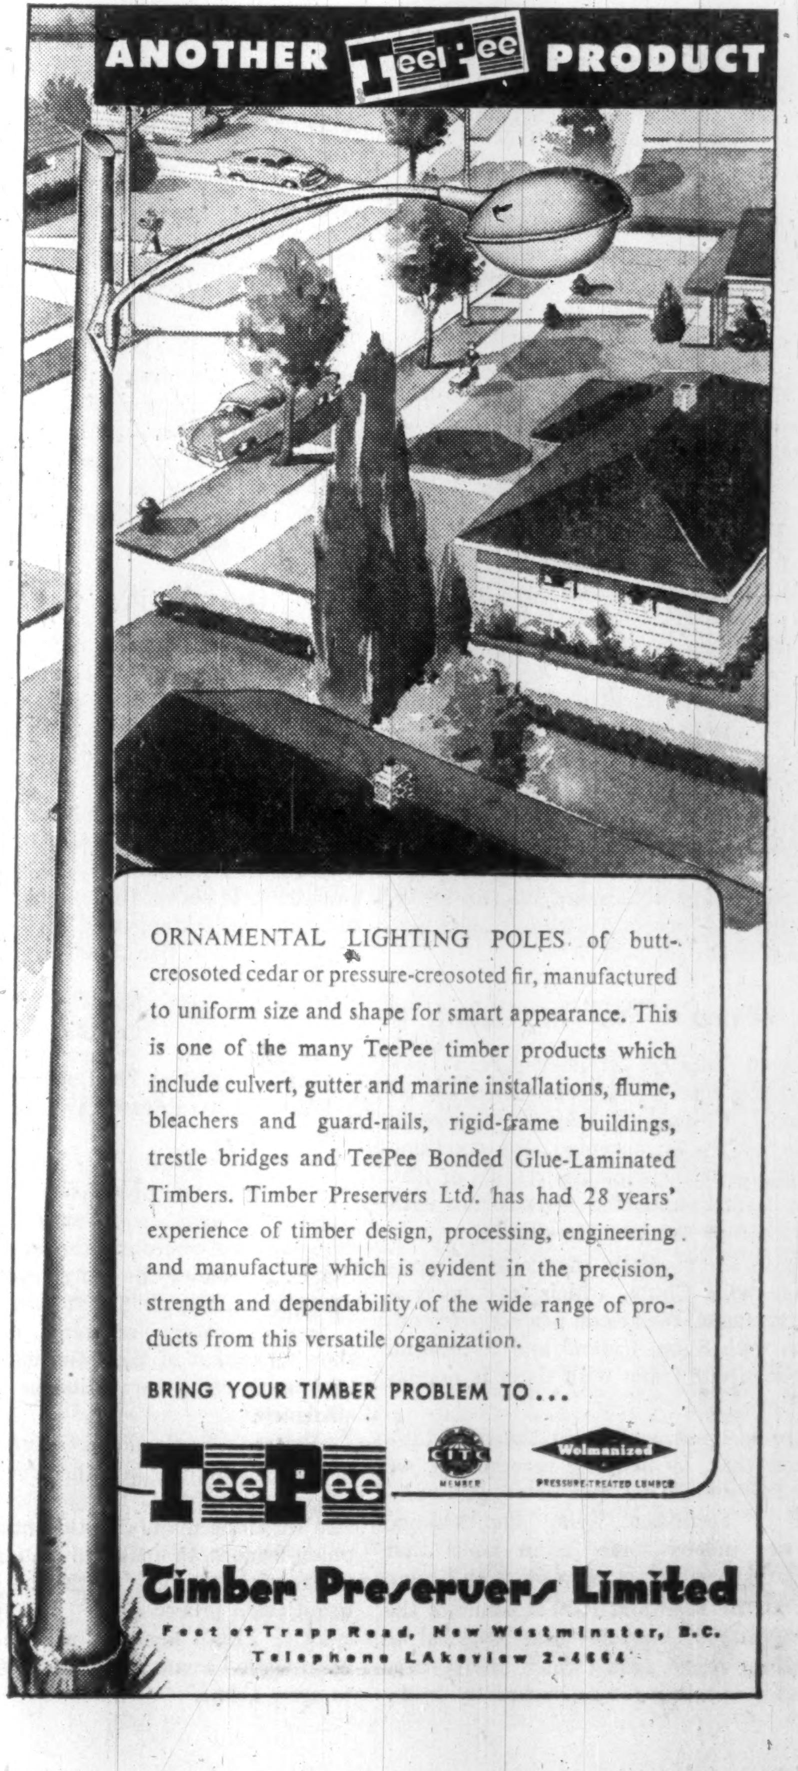
Wood, Gundy & Co. has placed privately $2,240,000 **Canadian General Transit Co.** 6¾% equipment trust certificates, Series I, maturing Jan. 1, 1961-80.

* * *

Canada Gazette recently reported the incorporation of **UBS Fund of Canada Ltd.**, with authorized capitalization of 10 million common shares and 1,000 deferred shares, both par $1.

* * *

A secondary distribution of 23,000 shares of **British American Oil Co.** was made Tuesday on the floors of the Toronto and Montreal Stock Exchanges at $34¾ (Monday's closing price), by **James Richardson & Sons.**



ORNAMENTAL LIGHTING POLES of butt-creosoted cedar or pressure-creosoted fir, manufactured to uniform size and shape for smart appearance. Return to Isolation?

Higher prices and more inflation are not the only calamities that could flow from last week's settlement of the U. S. steel strike. Some observers see a distinct threat of a serious revival of U. S. protectionism, if not immediately, then following the American presidential election this fall, and especially if the Republicans win.

A hoist in U. S. tariffs to parallel the general price rise triggered by higher steel wages could be part of the final Nixon-engineered settlement. Such a move would be popular with those narrow but vocal local interests who are already clamoring against foreign imports.

But it would be a disaster not only for the people of the United States but for all countries of the western world as well. It would spur the newly formed "inner six" and "outer seven" European trading groups to retaliation. The consequent world trade war would be immensely damaging all round and Canada certainly would not be a disinterested or unscathed spectator.

Traditionally, of course, the Republican has been the tariff-extremist party in the United States. It was the party that throttled world trade with the Fordney-McCumber and Hawley-Smoot sky-high tariffs of a generation ago.

True, there has been a Republican president in the White House for the last seven years yet high tariffs and even more potent quotas have been used sparingly. But Eisenhower was never one of the GOP regulars and he had to deal with a Democratic Congress. Nixon could be the first old-guard Republican president since Coolidge and Harding and the era of isolation. Nixon plus a Republican Congress could be bad medicine for world trade; but perhaps neither is a political probability.

How to Make a Fortune

The four "fastest-growing consumer products" of the last 12 years have been: air conditioners, TV sets, clothes dryers and boats.

Now, to make a fortune in the next 12 years, all you have to do is select early one of the now-rare products which is going to catch the public fancy, get on the market with it at a price that leaves you a fair profit, and then let your competitors worry about catching up.

And good luck to you.

Let Them Live Where They Like

Alderman Cranham of Toronto says he is opposed to the agreement between Ontario's capital city and the civic unions which forces city employees to live within the municipality. "We have no more right to tell our employees where they should live than we have to tell them to what church they should belong," he said.

He is right and it's to be hoped a lot of other aldermen in other cities across Canada will say the same thing.

Provided a policeman, fireman, teacher or garbage collector can get to his job on time, then it is his business and his alone where he lives. These attempts to keep city employees in, like those to keep suburban artisans and tradesmen out, are part of an old-time, walled-city feudalism which should have died out long ago. There are too many national barriers in the world today without municipal councils trying to get into the act.

To Keep the Record Straight

The Canada Council made a good move recently when it decided to support the gathering and publication of Canadian "historical" statistics.

This simply means statistics that go a long way back. There's no shortage of current and recent figures on Canadian population, trade, industry, etc. In its field Ottawa's DBS is tops in the world. That isn't just our say-so. Statisticians all over the world admit it.

For earlier days the story is different. The facts and figures about pioneer Canada are discoverable; but they were not put together in present-day compendious form.

As a result, it has been common practice to take U. S. statistics as a pattern and deduce from them, with due allowance for difference in circumstances, the probable state of affairs in Canada. This is highly unsatisfactory for students of history and economic development.

Prof. K. A. H. Buckley of Queen's and Prof. M. C. Urquhart of Saskatchewan have already done a great deal of work in digging up early factual records. They are to be editors of a volume of historical statistics which should be available in 1961.

The Canada Council's grant of $5,400 for this year is money well spent. We can never understand the present without knowing, accurately, about the past.

Mr. Green's "No" on China

External Affairs Minister Green says that Canada has no present intention of recognizing China's Peking government; and this has to be accepted, for the time being, as one of the diplomatic facts of life. But Mr. Green supported his position with arguments that are open to debate.

He says there's little chance of developing trade with China, which may be true but is irrelevant. We are on perfectly friendly terms with Siam, Iceland and Nicaragua even though our trade with them is negligible.

There is more weight in the minister's statement that, by denying recognition, we bolster the morale of our anti-Communist friends in Southeast Asia, like Malaya. There are indeed some Asian lands that appear to want no truck or trade with China.

But at the 1958 and 1959 sessions of the United Nations Assembly the proposal to give Peking a UN seat (which is the same thing as recognition) was backed by India, Burma, Ceylon, Indonesia, Nepal, Afghanistan and Cambodia.

These seven Asian heartlands, with 530 million population, include two members of the Commonwealth, India and Ceylon, and one ex-member, Burma—surely "friends" of ours. The opinion of this group evidently is that the rest of us must live with the Chinese revolution whether we like it or not.

Nobody believes for a moment that an exchange of ambassadors by Peking and Ottawa, or Peking and Washington would at once, or even soon, bring cordiality between the new China and the West. It's far more complicated than that.

The point of the argument simply is that Canada's present posture of support for Chiang Kai-shek, which amounts to a declaration of permanent and implacable hostility to Peking, only postpones indefinitely the day when we can even begin to re-establish normal relations with China, the world's largest nation and, at the moment, certainly one of its most dynamic.

Mr. Green rebuffs the suggestion that Canada's policy in this matter was, or is, made in Washington; and of course, in a formal sense, Canada's decision was a free one. But if American policy is reversed, as it could be after a new presidential regime starts next year, it will be rather surprising if Canada's doesn't change too.

War Is Obsolete

It was noted here recently that the cost of slaughter in war, like every other cost, has been enormously inflated as time has passed. While the price of killing one enemy was 75c for Julius Caesar, it runs to $3,000 for a contemporary war-maker.

Now it's pointed out by Jules Moch, the eminent Frenchman who represents his country at the United Nations, that the trend is the other way if the measure is how much material, or how much marksmanship, is required to dispose of a single soldier or civilian on the enemy side.

In the World War of 1914-18, M. Moch told the UN Assembly, it took 2,000 rifle bullets or ten artillery shells to kill one man in a trench. In the Second World War the cost of each fatal casualty was only 1.5 tons of bombs, or a fraction of one well-aimed explosive. Now a few pounds of nuclear matter can kill millions and prohibit life in thousands of square miles.

The moral is the same in both comparisons. War is obsolete.

Our Strike Record

How good is Canada's record in maintaining industrial peace? According to British figures just issued, this country is neither at the head of the class nor at the foot. It occupies a median position that could probably be improved.

The following table, put out by the U. K. Information Service, applies to the mining, manufacturing, construction and transport industries. It shows the number of days lost through work stoppages, strikes and lockouts, per year per 1,000 workers in the decade 1949-58:

U. S.	—1,330	India	—930
Italy	— 770	**Canada**	—750
Japan	— 660	France	—610
U.K.	— 220	West Germany	—100

It's difficult to draw any conclusions from these figures.

Evidently there is no necessary connection between the prevalence of strikes and either prosperity or poverty. The most industrially advanced of the eight countries, the U. S., shows the worst record of time-wasting disputes; but next to it comes India, a poor, low-wage economy, and the best showing is that of West Germany, a country that tops continental Europe in economic efficiency.

Britain's Trade Union Congress is putting in hand an enquiry into the causes of strikes, official and wildcat. The question it asks is: Are they due mainly to the intransigence of union leaders, to unskilful management or to workers' impatience with the slowness of negotiation procedures?

The TUC's answers will be interesting. Meanwhile Canada's strike record is nothing to crow about.

MR. BIRD

Maritime Booster

Walter Samuel Bird, newly appointed vice-president of Mussens Canada Ltd. (industrial equipment supplies), is a man with an enormous capacity for work. A firm subscriber to the hope for a bright economic future for the Maritimes and a leader in civic affairs, he is a member of the Atlantic Provinces Economic Council and president of the Fredericton Board of Trade.

"Wally" to his friends, Bird tries to find time in a busy schedule to indulge in such pursuits as golf in summer and curling in winter. Past president of the Fredericton Golf Club, he plays in the mid-80's.

Born in Marysville, N.B., in 1917—he attended grade school there and completed his education at Fredericton High School.

During summer vacations he took the first tentative steps toward his career, working with his father, superintendent of Canada Construction Co. After graduation, Wally Bird spent six years with Canada Construction. During World War II he was with Saint John Dry Dock & Shipbuilding Co.

He joined Mussens in 1946 as Maritime resident salesman, was elected a director four years later and appointed vice-president in 1956.

Bird is married to the former Phyllis Bailey and has four children, three boys and a girl.

MR. GREGORY

Stage Hand Makes Good

For one who has just been elected **president** of the internationally famous Stratford Shakespearean Festival, Wilfrid P. Gregory made an inauspicious start in the theatrical world. As an undergraduate at Victoria College in Toronto in the early 1930s, he tried out for a role in the college drama group. The director relegated him to a backstage job, in charge of properties.

In the intervening years, however, Stratford-born Wilfrid Gregory has been developing the broad range of experience needed by those whose task is to help foster the financial health of an artistic undertaking like Stratford.

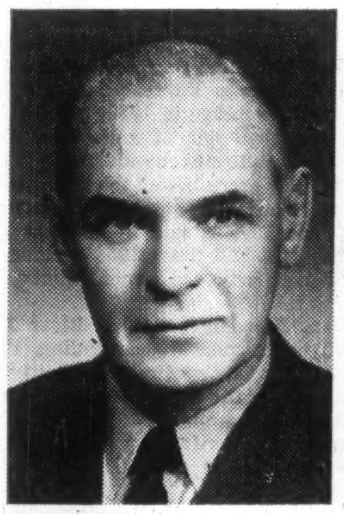
After earning his B.A. at the U. of T. in 1933, Gregory went on to three years at Osgoode Hall Law School in Toronto, then established a law practice in Stratford. He served as a Stratford alderman 1938-41.

During the war, Gregory served both in Canada and overseas in the Highland Light Infantry of Canada, holding the rank of captain at the time of his discharge. In 1946, he was re-elected to aldermanic office. From 1955 to 1956, he was mayor of Stratford.

Gregory was president of the Ontario Liberal Association 1954-56, and vice-president of the National Liberal Association 1956-58.

As executive vice-president and managing director of British Mortgage & Trust Co., he has helped foster the creation and development of the Shakespearean Festival ever since Tom Patterson's dream first began to take shape.

Wilfrid Gregory is married to the former Ann Stevenson and is the father of three children. Active in sports as an undergraduate — especially football and baseball—his main athletic interests today are golf and curling.



MR. GORDON

Draegerman Moves Up

The man who led rescue work in the 1956 and 1958 Springhill mine disasters has been appointed vice-president of Dominion Steel & Coal Corp.'s mining operations. He is Harold Cowan Morton Gordon who for 14 years has been general manager of the company's coal division.

Gordon now will boss 10,000 workers in Dosco's nine Nova Scotia coal mines and its two iron ore mines at Wabana, Newfoundland.

A man who knows more miners by first name than perhaps any one else in the industry, Gordon has met them at the coal face, at the pit head and around the conference table. He has been largely responsible for a long era of labor peace in the Maritime Provinces' coal fields.

When a mine tragedy occurs the broad-shouldered, six-footer is one of the first on the scene, having been a draegerman early in his career.

Harold Gordon was born in Fyfeshire, Scotland, in 1899. The family moved to Glace Bay, N.S., in 1907. When he was 17 Gordon entered Royal Military College and on graduation joined the Royal Garrison Artillery. After service in World War I he went to McGill University, graduating with honors in mine engineering.

Gordon joined Dosco as ventilating engineer, became resident engineer of Nova Scotia Steel & Coal Co. in 1929 and then assistant mining engineer of Acadia Coal Co. He was appointed general manager of Dosco coal operations in 1946.

In 1952 Gordon was awarded the INCO Medal in recognition of his service to the mining and metallurgical industry in Canada.

Mrs. Gordon is the former Dorothy Ross of Westville, N.S. There are three children

J. K. Edmonds Says . . .

EVERYONE will sympathize with Mr. Fleming when he pleads with the voters not to ask for more services from the government until the budget is balanced; but this is just about as useful as asking a group of mice not to seek more cheese.

Suppose the mice had a meeting at which they decided that there simply wasn't enough cheese to permit increased nibbling without endangering future supplies.

Suppose the leading mice warned that the mouse community was becoming too fat for its own good and might (through shortness of breath and insufficient speed) become too easy a prey to the cats.

Suppose some well-informed mice produced charts and tables to demonstrate that the existing level of cheese consumption was adequate and further cheese could be secured only at sharply increased risk of being caught in a trap.

What would be the result?

Some mice would still argue that though total consumption of cheese was adequate, that of their particular group was not, and therefore they should have more cheese regardless of the consequences.

Others would say that though some mice might be in danger of becoming too fat to escape the cat, they themselves had a long way to go before reaching that stage and should therefore have more cheese.

Trap? What Trap?

Still others would declare that the risk of getting caught in the trap was greatly exaggerated and perhaps didn't exist at all.

The mice would continue to struggle to reapportion the existing supply of cheese among themselves, and the hope that a riskless supply of additional cheese did exist would remain strong. The keeper of the cheese would have to get used to the unpopularity that comes with the need to say "no".

Mr. Fleming will have to do the same.

* * *

Putting a label on a decade has become a favorite sport of speechmakers and writers. We're all used to hearing about the Roaring Twenties, the Dirty Thirties, the Fruitful Forties, the Fabulous Fifties and (backing up a bit) the Naughty Nineties.

All these labels are the product of hindsight, and they're not a bad method of remembering roughly what each period was like.

But the Sixties are attracting labels before the decade even gets a good start; we've already heard or read about the Soaring Sixties, the Selling Sixties, the Scintillating Sixties, and even the Super Sixties.

Naming the baby before we've really seen it is apt to be misleading.

Look back at the Roaring Twenties. Who would have given them that name in 1919, when Warren G. Harding, the apostle of normalcy and serenity was about to become the president of the U. S.?

Who would have called the Thirties dirty in 1929, when the stock market was booming and there was plenty of rain on the Prairies?

Gloom Became Boom

As for the Fruitful Forties, no one —expert or otherwise—forecast the baby boom. A postwar depression was what everyone was gloomily anticipating as World War II began.

Even the Fabulous Fifties were ushered in on a wave of mournful warnings, based in part on the minor U. S. recession of 1949; and the Naughty Nineties occurred in the unlikely setting of the last years of Queen Victoria's reign.

It's true that forecasting is becoming a more common activity of social scientists; it's more sophisticated in its techniques and more widely understood in its limitations. We've learned a lot from the bad guesses of the past.

All the same, it might be wiser to wait until 1970 before we give the Sixties a pet name.

Jean King Edmonds, **FP** *contributing editor, holds a post-graduate degree in economics. She's a housewife and mother who finds much to wonder at in modern life. She lives in Winnipeg.*

What Others Are Saying

The Only Way

Toronto Globe and Mail

The cost of running Canada keeps going up. How can we meet that cost without increasing the burden of taxation? Only by increasing our production of wealth. But to increase production, we must have markets —20% of them abroad, as Mr. Fleming points out. To have those markets, our prices must be right, which in turn means our costs must be right.

Increased productivity, stabilizing and lowering costs, is the only way we can meet all our obligations, our dangers and our opportunities. Whoever takes up this matter in the coming session of Parliament, whoever argues that productivity is at least as important as tariffs, quotas, trading blocs and all the rest, will be serving Canada as it urgently needs to be served.

CANADIAN RAILWAYS should not take a defeatist attitude toward the passenger business, thinks the **Fredericton Gleaner.** "They could take a tip from Cunard. Despite the fact that in 1958 for the first time, more people crossed the Atlantic by air than on its surface, this company is planning replacements for its luxury liners, the Queen Mary and the Queen Elizabeth."

WINTER NAVIGATION on the St. Lawrence has long been a dream, but, says the **Montreal Gazette,** "curiously enough the dream seems to be coming true. Last winter Quebec received shipping in winter and this winter a ship for the first time in history, has come up the river as far as Three Rivers."

CHILDREN WILL LOSE MOST in the passing of the horse, thinks the **Lethbridge Herald.** "The child who has not known at least passing familiarity with a horse has missed something of value. And for many city children, even in Lethbridge, horses will henceforth be creatures which appear only at exhibitions and rodeos."

THE MOTOR CAR is a much abused vehicle when it comes to taxes, thinks the **Peterborough Examiner.** "There is no point in trying to make a dray horse for taxation out of it; and if it is to be taxed heavily—as it is—the revenue must be directed to where it will do the driver the most good—on the roads."

Stop Me If . . .

A frightened householder reported to the police that he'd been struck down in the dark outside his back door by an unknown assailant. A young policeman was sent to investigate and soon returned to headquarters with a lump on his forehead and a glum look on his face.

"I solved the case," he muttered.

"Amazingly fast work," his superior complimented him. "How did you accomplish it?"

The young cop explained, "I stepped on the rake, too."

* * *

A mother and her young son were shopping at a supermarket. The youngster, desiring to help, picked up a package that attracted him and brought it over to his mother.

"Oh, no, honey," cried his mother. "Put it back. You have to cook that!"

* * *

In a Western cowtown an old man was walking by a saloon when, without warning, a young cowhand dashed out, took a flying leap from the sidewalk and landed on the seat of his pants in the gutter.

The man hurried over to him. "Are you hurt?" he asked.

"No," was the angry reply, "but I'd shore like to meet the so-an-so who moved my horse."

* * *

Mama: "Willie, you come here like a good boy and kiss your new nursemaid!"

Willie: "Not me, I'm afraid!"

Mama: "Afraid—why?"

Willie: "Cuz Daddy kissed her yesterday — and she slapped him!"

Down With These Doleful Dramas

Suicidal "On the Beach" gives this critic a pain in the neck . . .

By J. B. McGEACHY

MAYBE I AM OUT of touch with Antipodean customs but I can't see Robert G. Menzies, Prime Minister of Australia and one of my favorite statesmen, doling out suicide pills ad lib to his constituents.

Indeed if Mr. Menzies ever gets into the wholesale prussic acid and barbiturate business, anything can happen and I think you will be safe in laying odds that one of these days Pope John will join the Communist party and, as Khrushchov says, shrimps will whistle.

I am talking about the new movie "On the Beach" now getting a big play. In this work Australians are represented bumping themselves off en masse, for fear of atomic radiation, with Mr. Menzies' official blessing and assistance.

There would be no point in being upset by one more bad film; this is too commonplace an event to excite anybody's spleen. But "On the Beach" is said to be "not just a movie".

It had a world premiere on the same night in London, New York, Moscow, Paris and other centres of civilization. It's being treated as a kind of Portent, to be Taken Seriously.

All right, then, let us take it seriously. It's fair as a thriller and the acting is no more wooden or grotesque than usual in such productions.

But, let me say with a straight face, I was appalled by the defeatism of the people in the story; and it amazes and terrifies me that the public (and its mentors, the critics) evidently think it possible or even likely that this is the way the world might end, in a suicidal swocn-song for massed choir.

In this spirit I shall proceed to demolish "On the Beach". Then, if there is room I shall deal with the play "J.B.", another nihilist work that had the same effect on my hackles.

It ought to frighten anyone, I think, to notice the affinity between "On the Beach" and that loony Wagnerian nightmare known as "Götterdämmerung" or "The Twilight of the Gods", the most disastrous composition of all time.

Wagner's music is all right if you like that sort of thing but, unfortunately for the human race, the man insisted on writing his own dramas. The most lethal of his themes is described by H. R. Trevor-Roper, professor of modern history at Oxford, as "the ancient froth of Niebelung nonsense, whose exhalations poisoned German political thought". They poisoned a lot more than that.

J. B. McGEACHY

> **"I am sick of the merchants of doom and dreariness. I have come to the conclusion that the tragic view of life is for six-year-olds; and I am getting past the age."**

"Let's all die together, the more the merrier" is the jolly, catching idea of the final spasm of the Niebelung series. As the curtain falls (thank heaven) on the last, daft act of "The Twilight", Valhalla is in flames, all the legendary heroes are going up in smoke at once and heaven forbid there should be any survivors.

Well, my friends, Hitler was a great Wagner addict. Wagner had a most profound and baleful effect on him and his sheep-like followers. There can be no doubt at all that when Hitler shot himself in that Berlin bunker, having pre-arranged a Viking funeral for himself and the simultaneous demise of as many other people as possible, he fancied himself a Wagnerian demi-god on a "Götterdämmerung" pyre, bringing his world crashing down with him.

For my taste, there is too damn much "Götterdämmerung" in "On the Beach". But before going any further perhaps I should supply a brief synopsis of the plot.

When the action of the movie starts, there has been an atomic war, presumably between Russia and the U. S., and everybody is dead north of the equator. In fact, there's nobody alive except in Melbourne, Australia's most southerly city.

These survivors have five months to go; it will take that length of time for radioactive clouds to blow down to their latitude and engulf them fatally. In the last scene of the film they are all dead as mutton; we see an empty Melbourne street with a few paper tatters flying about but not a human being, dog, cat or other living creature in sight. The earth is one large tomb.

Very well then, and no doubt highly impressive, but what happens in those decisive five months of reprieve? Nothing much. The people we meet are engaged for the most part in rolling in the hay, drinking, singing "Waltzing Matilda", surf-bathing, racing fast cars and generally mooning about.

This is fine with me. Anybody who wanted to spend his last five months in any of these ways would have my permission.

But is anybody in authority, anybody with any brains, actually doing something about a situation that would, I think, be recognized as an emergency even by the deputy police chief of Muddletown, Ont.? No. Nobody is doing a damn thing except wringing his hands.

Don't tell me there was nothing to be done. I am no scientist but here are a few amateur suggestions:

Organize an expedition to Antarctica, hoping that low temperature and snow might somehow offset radiation; experiment with space-platforms above the clouds; blast holes in mountains; try under-sea living with "the harvest of the sea" as food; form a bank of healthy human bone marrow, or synthetic bone marrow, for transplanting into people who get leukemia.

All these ideas may be unsound, though remember that, during World War II, Churchill ordered investigation of even the most crazy-looking contraptions for victory and adopted some of them.

But this is not a scientific essay. My point is simply that, in the circumstances of "On the Beach", I think the Australians would be sweating blood and tears night and day trying something, anything, everything.

Instead of that, we get a glimpse of what appears to be the Australian cabinet. There's a mention of the Prime Minister (and that's Mr. Menzies if my Statesman's Year Book is up to date). We learn that he has authorized a general issue of happifying pellets that will put everyone out of his misery — but fast and permanently.

Then there's a Melbourne street scene with a long queue of people, like a 1932 breadline, waiting for their morphine ration or whatever. At the end, our characters having taken their pills like good infants, the lovers bid one another fond adieu in the setting sun or lie down to pass out 'together,' no doubt with a song on their lips, "Good Night Sweetheart Till We Don't Meet Tomorrow". It's like an ending from "The Maid of the Mountains".

Now I ask you, did you ever hear of such a travesty of human character and behavior? Isn't this "Götterdämmerung" all over again— minus flames but still the same product like Leacock's whisky without fumes?

Wagnerian or not, it strikes me as rubbish. For one thing, I know Mr. Menzies. He rates as one of the three or four top brains among the world's politicos (in fact, he's so bright, he infuriates other Australian MPs the way Aristides the Just used to infuriate the Athenians) and for courage I would say he's a Churchill.

The notion of Menzies handing out knockout drops as a national policy — well, I can find no way to express my incredulity but, for a near miss, try imagining Mr. Diefenbaker handing out martinis.

It doesn't matter, of course, whether the anonymous character in the film is meant to be Mr. Menzies or not; he just happened to come vividly to my mind as I watched. It doesn't matter either that it's the Australians who are involved.

What frightens me is public acceptance of the notion that this is the way a civilized government and nation would curl up and die. If that's true, I'm a horse.

The philosophy of "On the Beach" is that life isn't worth fighting for anyway, the human race was one of God's mistakes, the death wish grips us and, as Freud says, we're all desperately anxious to get back into the darkness of the womb.

If we honestly believe that, we're sunk without a trace; for the power of the word and of ideas is far mightier than the power of the sword.

Don't misunderstand me. I am all against atomic war and hope that no nation ever finds itself clinging to a shelf of earth shrouded with radioactive dust. **I only say that if a nation so placed could be expected to behave like the gutless, boneless, spineless, feckless wonders of "On the Beach", and if we all think that's how we would behave too, we haven't a chance.**

For my part, I reject this philosophy. For me it's intellectual garbage. So is "On the Beach".

Let us turn to that confused theological confection, the play "J.B." by Archibald MacLeish. It's a modern version of the Old Testament book of Job.

J.B. (we are not told his surname) is introduced as an immensely rich American with a beautiful wife and beautiful children.

Unfortunately the members of this family are suffering from a crippling case of Togetherness (an American adhesive composed of three parts cornstarch, one part corn syrup). In consequence, their first-act matutinal chatter is of such stupefying banality that no bright chimpanzee could care two cents when these characters perished, or whether they fried in hell or drooled in heaven.

Their weakness of intellect, however, is not the point; it only diminishes the sympathy one is able to feel for J.B. when calamity strikes. For, just as the ancient Job lost his sheep, his oxen and everything else, so J.B. loses his family, goes broke and suffers a bad attack of boils.

Inane though the fellow is, he does elicit a spark of fellow-feeling at first; luck has indeed turned against him. Still, other men have suffered like disasters and managed to stay perpendicular.

Not J.B. He grovels. For a long scene we must watch him creeping about the stage on his hands and knees, howling and groaning like a wounded elephant. It was intolerable.

I am an easy mark for theatre, able to sit happily through anything from "Charley's Aunt" to "Oedipus Rex", but I couldn't take "J.B." at all.

At "Oedipus" I always have an impulse to cry out, at the crucial moment: "Hey, in view of what the soothsayer said, don't you think you'd better make sure the lady isn't your mum?"

At the MacLeish play I wanted to quote Walt Whitman but couldn't remember the lines: "I think I could turn and live with the animals. They are so placid and self-contained. They do not sweat and whine about their condition; they do not lie awake in the dark and weep for their sins."

Certainly any well-bred cow or horse would have behaved with more dignity than J.B. in the circumstances; but what I wanted him to do was not to go and eat grass but to display some of the quality of an adult male human.

I muttered to myself as I observed his wretched creepings and crawlings: "Get up off the floor, you ridiculous belly-acher, and have another go at it, with maybe only two sheep for a starter or two shares of General Motors as the case may be."

This advice, as it turned out, would have been useless; for as the play unfolded it became clear that J.B. (just like the Australians in "On the Beach") would do nothing at all about his predicament but wait for heaven to intervene. A purely mechanical deity, a deux ex machina if there ever was one, did in fact descend on the scene and restore J.B. to his pristine state; but the dramatic validity of this event was obscure, indeed non-existent.

The same happy ending, I know, occurs in holy writ; but scholars think it was tacked on by a later hand and theologians have been arguing about the meaning of the Book of Job for centuries.

This would excuse Mr. MacLeish's confusion but not the play.

The only point I could get from it (as from "On the Beach") is that man's proper line, when the outlook is grim, is to lie down, whimper and take it like a rabbit, waiting for death or a stroke of good luck. Even if this seemed a good rule of life in Old Testament days, which I doubt, it is certainly uncongenial and unsuitable to contemporary man, perhaps most of all to contemporary man in Ben Gurion's Israel.

For me, then, "J.B." was a pretty sour kettle of fish; and I sometimes think those prize-winning types should change its name to the Leg-pulitzer.

I shall now read Dr. Johnson, Stephen Leacock or someone else who wrote sense and possibly listen to some music by Mozart. I am sick of the merchants of doom and dreariness. I have come to the conclusion that the tragic view of life is for six-year-olds and I am getting past the age.

Avro Names Brown General Manager

Appointment of Kenneth W. Brown as vice-president and general manager of **Avro Aircraft Ltd.** is announced.

Born and educated in Washington state, Brown returns to Canada from his post as general manager, operations, at **Boeing Airplane Co.**, Seattle. He spent the years 1948-53 in the aircraft industry in Montreal.

Other new appointments at subsidiaries of **A. V. Roe Canada Ltd.**:

- **John L. Plant** as vice-president and general manager of **Canadian Applied Research Ltd.** Before his retirement from the RCAF, Air Marshal Plant was Air Officer Commanding, Air Materiel Command.
- **Burton A. Avery** as vice-president and assistant general manager of **Orenda Engines Ltd.** He was formerly chief engineer.

A NEW WAY TO INVEST
WITH CANADA TRUST AS YOUR AGENT

Canada Trust Investment Fund provides
a unique combination of advantages

Canada Trust Investment Fund

Two types of units are available

FIXED INCOME UNITS
—investment in Government and Corporation bonds, debentures, first mortgages—with emphasis on the safety and assured income they provide.

EQUITY UNITS
—investment largely in common stocks of sound corporations—which provides a share in the growth and earnings of Canadian industries.

Canada Trust Investment Fund

Canada Trust Investment Fund
offers complete flexibility

UNITS
are allocated in either or both parts of the Fund —and may be converted from one part to another.

No charge is made on the allocation or the redemption of units at their *net asset value*.

HELPING YOUR MONEY GROW

SAFE-GUARDING YOUR ESTATE

Telephone or mail the coupon below to our local office to obtain full particulars.

thanks to XEROGRAPHY...
A Stock-Print System Saves You Up to $50,000 Yearly

You can save $50,000 or more a year by installing a stock-print system of engineering drawings. Cutler-Hammer Inc. of Milwaukee is achieving such an economy. So is Arma division, American Bosch Arma Corporation, Garden City, N. Y.

A stock-print system is a streamlined library of engineering drawings commonly in use. The library is unattended. Anyone who wants a drawing helps himself. There are no requisition forms, no waiting, no refiling. Prints are so inexpensive that engineers are urged to discard them after use.

What makes such efficiency . . . and such seeming extravagance . . . possible?

The answer is xerography and offset duplicating. Xerography is a clean, fast, dry, electrostatic copying process that within seconds reduces original drawings as large as 34"x44" onto inexpensive offset paper masters. From them, multiple copies are run off on an offset duplicator.

There is a wide range of XeroX copying equipment for setting up an efficient stock-print system. Your reproduction needs determine the xerographic model best suited to you. All models—besides preparing offset paper masters—make copies on plain, unsensitized paper or translucent vellum for diazo-type reproduction.

All models—whether manual or automatic—enlarge, reduce, or copy size to size. They offer the fastest, most versatile, most economical way to get sharp, clear copies from original documents of all kinds or from microfilm.

Write for proof-of-performance folders showing how companies of all sizes are speeding paperwork duplicating and saving thousands of dollars yearly by xerography.

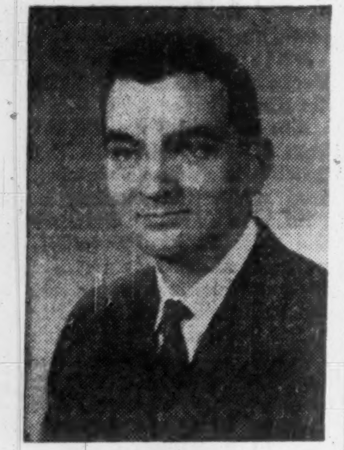
ANNOUNCEMENT

PUBLICATIONS DIVISION HEAD



BERT PRIME

BERT PRIME has been appointed director of the newly-formed publications division of Editorial Communications Inc., Montreal public relations firm, announces David R. Cox, president. An experienced journalist, Mr. Prime was most recently editor of Canadian Builder magazine and first vice-president of the Business Paper Editors Association. Previously, he was assistant editor of Canadian Business magazine. This new division of Editorial Communications Inc. edits and produces internal and external company publications, annual reports, brochures and sales literature.

Prices Rising In New Homes

(CONTINUED FROM P. 1)

builder to install in a subdivision, is going to grow.

Right now, **FP** was told, individualistic Canadians aren't too receptive to a home with too many things already installed, but it will come.

For the builder, it now only represents a temptation but a trend to more equipment already installed is inevitable.

Builders are becoming more and more cost-conscious and aware of the need to streamline every aspect of their businesses if they're going to keep them.

Evidence: This year's convention has over 500 builders from across Canada, the greatest country-wide representation yet.

"A few years ago," a top NHBA executive told **FP**, "many of these fellows weren't too interested in scientific business management. Now they're hungry to learn how to dig out hidden costs and streamline their operations.

"The builder who doesn't do this is going to end up working for some builder who did."

Sidelights to the convention:

- **House building in Toronto** is more stereotyped and out-of-date than anywhere else in Canada. This from a Toronto area builder after a cross-country tour.
- **Builders claim** that, if there was no money shortage, they could launch another 140,000 starts this year and sell them.
- **Despite wailing** over NHA money shortage, and dire estimates of starts as low as 90,000, builders generally are quite confident that the federal government won't let starts fall below 125,000.
- **Asked to comment** on reports from some insurance companies that there was a surprising lack of applications for NHA loans from builders so far this year, NHBA president Maurice Joubert grinned and said he was confident builders would grab all the loans they could lay their hands on.

The Outlook

(CONTINUED FROM P. 1)

to be little reason to expect an early easing in monetary and credit conditions."

▶ **Ottawa may be able to get its budget into balance and perhaps even produce a small surplus.** This, anyway, is the expectation of Donald Fleming, the Minister of Finance, who told a Toronto audience this week that Ottawa is "deliberately seeking to bring revenues and expenditures into closer balance in order that we may not find it necessary to make new borrowings."

With government spending less important, relatively, than in 1958 or in 1959, one source of pressure on consumer prices is removed. At the same time, **fewer new federal cash requirements may well make it easier for provincial and municipal governments to borrow in the Canadian money market.**

But bigger spending of a capital nature by business, as well as by municipalities and provinces, will keep bond prices at least as low as they are currently and interest rates at least as high. Business spending, especially on new equipment, is expected to ride 10%-12% above 1959 levels.

▶ **Consumer credit is likely to advance fairly rapidly in 1960,** especially outside the banking system which is responsive to monetary policies.

Employment over the year is likely to be growing rapidly enough to keep unemployment down to a minimum. Incomes, as a result will show substantial advances and labor income alone may well rise by 8%. So the consumer is likely to be in a buying mood.

"More money will be spent on motor cars and on household appliances than during any of the past four years," predicts A. C. Ashforth, president of Toronto-Dominion Bank. These are items traditionally involving time purchases.

* * *

Despite an expansion that will push production, employment, income and consumption to new peaks, **there's a good chance that consumer prices will rise appreciably less than they did under the impact of the last boom.** This year's increase may be only 1%-1½% as against the 2½%-3% advances of recent years.

There's no blinking the fact that the upward pressure on prices will intensify as boom year 1960 wears on. But there are several factors which should keep increases on the modest side:

- **Both monetary and budgetary authorities are united in keeping the current expansion within limits;** officialdom is determined as never before to avoid inflation. One reason: Our exports and our prosperity can't countenance higher prices.

As Mr. Fleming put it: "The scarcity of goods in the earlier postwar years has disappeared. The buyers' market is here and likely to continue as far as one can see."

- **Supplies of materials, capacities of existing plants and, indeed, supplies of manpower are all greater now than they were in 1956-57;** there's more leeway in the economy which means that substantial increases in production can take place without bringing very serious inflationary pressures to bear.

One prediction of prices comes from General Research Associates, Toronto business consultants:

"General wholesale prices, excluding animal and vegetable products, where the advance has been relatively mild in the expansion thus far, are likely to register more significant increases in 1960. But demand pressures are not likely to press to the absolute limits of supply and, with the prospect of continuing and keen competition, prices hikes are likely to be cyclical rather than inflationary in nature."

If the advance in wholesale prices is likely to be held within reasonably narrow limits, there's reason to expect that relative stability will continue in consumer prices.

Construction Awards Dropped 10% in 1959

After an all-time record in 1958, value of construction award contracts dropped by 10% for 1959, acording to **Hugh C. MacLean Building Reports.**

Principal cause was a 21.3% drop in residential construction. Industrial construction showed a 4.9% gain in volume and the Western region was up 2.8% over the previous year.

Cost increases outstripped all years since 1951 with a 5.7% increase — 2½ times the previous year's gain.

Comparative national cumulative totals for each category for 1959 in millions of dollars (with 1958 figures in brackets) are as follows:

Residential, $1,112.7 ($1,413.2); business, $1,068.9 ($1,125.4); industrial, $261 ($248.8); engineering, $776.6 ($806.3). Total: $3,219 ($3,593.7), down $374.6 million.

Comparative regional cumulative figures in millions of dollars for the 12 months of 1959 (with 1958 figures in brackets):

Maritimes $252 ($291.8); Quebec, $913.6 ($1,042.9; Ontario, $1,262.3 ($1,489.7); Western, $791.2 ($769.5).

Metropolitan trends: Both Toronto and Montreal show decreases in volume during 1959.

Toronto's 12-mo. total is $473.6 million, down $136.6 million or 22.4% below the figure for 1958.

Montreal's total at $466.2 million is $246.5 million or 34.6% below the total for the previous year.

Construction contract awards during December, 1959, were 37.8% below the level of the same month in 1958, Hugh C. MacLean Building Reports state.

Percentage changes in the various categories and regions when comparing the December totals for 1959 and 1958: residential, down 43.2%; business, down 13.5%; industrial, down 74.7%; engineering, down 40.9%. Maritimes, down 64.2% Quebec, down 62.2%; Ontario, down 9.3%; and Western, down 35.9%.

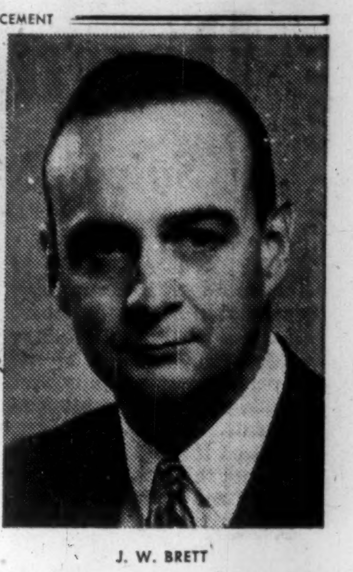
Contract awards for December, 1959, totaled $168.6 million, down $102.5 million from the same month in 1958.

Comparative national figures for December, 1959, for each category in millions of dollars (with 1958 figures in brackets) are:

Residential, $59 ($103.8); business, $71.5 ($82.7); industrial, $8.9 ($35.3); engineering, $29.1 ($49.2).

ANNOUNCEMENT

W. H. AGNEW



J. W. BRETT

W. H. Agnew, President of Craig Construction Equipment Co. Ltd. of Ottawa, announces the election of Mr. J. W. Brett (right) as a Director of the Company and his appointment as Vice-President. Mr. Brett will function primarily as Comptroller and Federal Government Representative.

TO: *the holders of the common shares and warrants carrying the right to purchase common shares of*

HENDERSHOT PAPER PRODUCTS LIMITED

The Canada Permanent Trust Company, as agent for an undisclosed principal, has made an offer to the holders of the common shares and warrants carrying the right to purchase common shares of Hendershot Paper Products Limited at the price of $9 per common share and $3 per warrant right to purchase one common share, all upon and subject to the terms and conditions of a formal offer bearing date January 7, 1960. The formal offer has been mailed to all common shareholders of record of Hendershot Paper Products Limited.

The holders of common shares whose certificates are not registered in their own names and the holders of warrants may obtain copies of the formal offer and letter of transmittal and instructions for acceptance by making application to The Canada Permanent Trust Company, 320 Bay Street, Toronto 1, or at any branch office of The Canada Permanent Trust Company. There are branch offices at the Cities of Vancouver and Victoria, Edmonton, Regina, Winnipeg, Woodstock (Ontario), Brantford, Port Hope, Hamilton, Montreal, Halifax and Saint John, (N.B.)

Attention is drawn to the fact that a large number of the warrants were issued in connection with the 6½% First (Closed) Mortgage Sinking Fund Bonds and 6¾% General Mortgage Sinking Fund Bonds of Hendershot Paper Products Limited.

THE CANADA PERMANENT TRUST COMPANY

Freight Men Face Puzzle In 'Masquerading' Imports

OTTAWA (Staff) — Should the railways be required to trace the origins of all goods presented to them for shipment out of ports in the Maritime Provinces?

That's one question the Board of Transport Commissioners will answer after hearings beginning Feb. 8.

The case:

Under the Maritime Freight Rates Act, the government pays about $12 million annually to subsidize freight movements originating in the four seaboard provinces.

Goods moving to Central and Western Canada get a 30% reduction from normal rates. Goods moving from one point in the Maritimes to another get a 20% reduction.

Question: Can an import shipment legally qualify for the special low Maritime freight rates?

The board will decide. If such a shipment can't legally qualify, the board will try to stop the practice, and presumably will pass the job of determining the origins of shipments to the railways.

One way would be to make forwarders declare that prospective shipments did indeed "originate" with in the Maritime provinces.

The word "originate" will have to be defined.

The commissioners have asked shippers to submit briefs answering these questions:

- **When does import traffic to Canada, originating overseas and imported through Halifax, become domestic traffic** qualifying for the low Maritime rates?
- **Suppose a Toronto importer has goods shipped from England to him at Halifax.** He accepts the goods at Halifax, pays duty, then ships them to himself at Toronto. Is he eligible for the low rates?
- **Suppose an English manufacturer sells goods to a Halifax distributor.** Can the distributor use the low rates to ship the goods elsewhere in Canada?

Japan May Be Coal Market

(CONTINUED FROM P. 1)

will leave for Japan next week to make further studies of the heating qualities of Canadian coal under Japanese conditions. Subventions for the new contracts will be based on these studies.

Coal industry officials will begin negotiating with the Japanese in February.

Objective: New contracts to begin April 1, calling for sale of an annual 250,000 to 300,000 tons, at a price between $10 and $10.50 a ton.

The contracts won't run for longer than three years because they will depend on subventions which must be renewed annually by Parliament.

The government must go to the country at least by 1963 and can't commit itself to subventions beyond that date.

But it is assumed here that any succeeding administration, Liberal or Conservative, would continue them; and that Canada will maintain a hold on this Japanese market for many years.

This advertisement is not, and under no circumstances is to be construed as, a public offering of the Debentures for sale in the United States of America or in the territories or possessions thereof.

NEW ISSUES

The City of Montreal

$13,478,000 Sinking Fund Debentures dated as of December 15, 1959

$2,643,000 6% Sinking Fund Debentures for Public Works due December 15, 1964

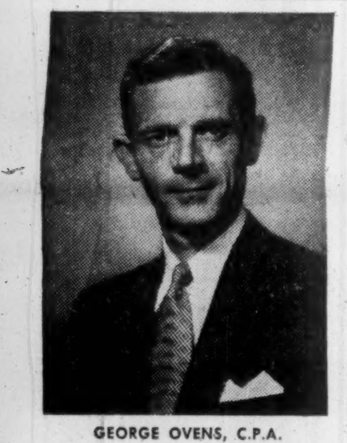
ANNOUNCEMENT



GEORGE OVENS, C.P.A.

Elder, Donaldson & Crofts have announced the appointment of Mr. George Ovens, C.P.A., to their organization. Mr. Ovens was Chief Valuator of the Succession Duty Branch in Ottawa for several years, and he has had broad business experience in the fields of taxation and estate planning.

This firm, licensed with the London Life Insurance Company, specializes in estate analysis, business life insurance, and employee benefits.

CONSOLIDATED PAPER
ELECTS NEW TREASURER

Following a recent meeting of the directors of Consolidated Paper Corporation Limited, the election was announced of Stanley D. Elder, C.A., F.C.I.S., as Treasurer of the Corporation and its subsidiary companies effective January 1st, 1960. He succeeds D. Lloyd Adams, F.C.I.S. who is retiring after forty-one years service with the Corporation and its predecessor companies. Mr. Adams is continuing in the service of the Corporation in a consulting capacity.

Automakers in War on Imports

(CONTINUED FROM P. 1)

ons to its Falcon and Frontenac lines, has been pushing the compacts through its Oakville assembly plants at a ratio nearly 25% of total production.

- **Chrysler** also is introducing a station wagon in its Valiant line, has raised Valiant production to between 20% and 25% of total production schedules in Windsor.

- **Studebaker-Packard** plans to increase Lark production by approximately one third.

- **American Motors** — with Rambler sales outstripping car availability last year — has planned a step-up of imports from the U. S.

To produce Corvair, with unitized body construction, General Motors built a completely new plant beside its modern South Plant in Oshawa.

As a result, its production facilities were increased by at least 25% and Corvair production is entirely in addition to that of the other GM lines.

First Corvairs were all four-door sedans. Two-door sedans are now on the production lines and will be unveiled to the public as soon as dealers' showrooms have been stocked.

A new small car — the Envoy — now is arriving from overseas and is being distributed to Chevrolet - Oldsmobile dealers across Canada.

It is slightly smaller than the Vauxhall which is handled by Pontiac-Buick dealers.

With this car in addition to the Corvairs, Chev dealers will be powerfully armed to compete with "independent" imports.

Last year Vauxhall more than doubled its sales in Canada — racking up 27,073 registrations against 13,488 in 1958. That gave Vauxhall approximately 6.4% of the total Canadian market, beating out **Volkswagen** which held slightly more than 6% with sales only slightly increased over 1958.

Ford produced 5,000 Falcon and Frontenac two-door and four-door sedan models at Oakville in the last four months of 1959 — more than the total of all compact cars made by other Canadian manufacturers last year.

That was about one in five of Ford's total passenger car production in that period.

Now Ford has announced two-door and four-door station wagons to be added to the Falcon and Frontenac lines, to go into production "within the next few weeks".

Chrysler now has a four-door Valiant station wagon going out to dealers, in addition to the four-door sedans which have been in production since the beginning of the model year.

Studebaker-Packard resumed production at its Hamilton plant Jan. 11 after a Christmas-New Year layoff for plant re-arrangement and installation of new equipment, and will continue production on a less-than-normal basis until steel supplies become adequate, probably early in February.

Then, Studebaker plans accelerated production of its Lark, for which sales are projected at 11,000 for 1960, up one third from 1959.

In addition, S-P will commence production of the Hawk, not made yet in Canada in the 1960 model year because of steel shortages.

To further the appeal of its Lark line, S-P added a convertible and four-door station wagon late last year.

Called the only complete line of compact cars in Canada, the Lark has in addition, two-door and four-door sedans, a two-door station wagon and a two-door hardtop.

Studebaker reports that its dealer organization increased by 50% in Canada last year, and that it added 15 new dealers in December and early January.

Here's how the various makes ended 1959:

Chevrolet held an easy first in Canada, followed, in order, by Pontiac, Ford, Meteor, Dodge and Plymouth. Oldsmobile held an easy top position among "medium-priced" makes, followed by Buick, Mercury, Chrysler, Monarch and De Soto.

General Motors, including Vauxhall imports, held 44.2% of the Canadian market for the first 11 months, compared with 46% for all 1958.

GM's domestic production (including imports from U. S. of its biggest cars) held 37.8% of the market, down from 42.7% in the previous year.

Ford's increased production and higher sales of U. K. Ford products in Canada raised its over-all penetration of the market to 24.4% compared with an even 24% in 1958. But sales of domestically produced cars plus U. S. imports sagged slightly, from 22.1% in all 1958 to 21.9% in the 11-month period.

Chrysler's share of the market last year was a slight fraction less than 10%, compared with 12.8% in 1958.

American Motors, represented primarily by Rambler, had slightly more than 2% of the market for the 11-month period, with a gain in sales volume of 73% from 1958.

Studebaker's Lark has just under 2% market penetration.

All European imports together — including those brought in by major Canadian producers — had a whopping gain of one third in their market penetration, from 19.7% of total Canadian sales in 1958 to 26.4% for the 1959 period.

An estimate by Canadian Automobile Chamber of Commerce showed monthly average employment (salaried and wage-earners) in car and truck plants of 33,000 persons, with a total payroll last year of more than $150 million.

Record employment, in 1956, was 35,099 average with the same total payroll.

Motor vehicle manufacturers remitted to the federal government last year about $155 million in sales and excise taxes — more than the total wage bill.

Total vehicles in use on Canadian roads increased 4.2% last year to an estimated 4.9 million —3,750,000 cars and 1,150,000 trucks.

This represents a motor vehicle for each 3.4 persons, and a passenger car for every 4.6 persons in the country.

Our Automakers May Shatter Quarterly Record

All first-quarter records for Canadian automotive production will be broken if manufacturers fulfil their targets, says Ward's Automotive Reports.

Projected total: 123,800 cars.

This would be an increase of 30% over the same quarter last year. It would be 17,872 higher than the previous first-quarter high of 105,928 in 1954, and only 12,285 less than the all-time best quarter, April-June, 1956.

Compact cars are expected to account for 20,500 units in the next three months.

General Motors is scheduling 64,500 cars or 52% of the total: **Ford** 39,300 or 32%; **Chrysler** 18,000 or 15%; **Studebaker-Packard** 2,000 or about 2% of total production.

Getting Ahead
Astute businessmen plan for success; they read The Financial Post because it helps them make right decisions. Yearly by mail in Canada $8; elsewhere $9 yearly.

These Men Fill Key Posts In Coast Forest Merger

M. Joseph Foley has been named first president of **MacMillan, Bloedel & Powell River Ltd.**

Merger of MacMillan & Bloedel Ltd. and Powell River Co., with combined assets of $293,661,000, became effective Jan. 1.

H. R. MacMillan was named honorary chairman, Hon J. V. Clyne chairman, and H. S. Foley vice-chairman.

Directors also made these line and staff appointments:

- **Ralph M. Shaw,** former president of MacMillan & Bloedel Ltd., is appointed executive vice-president in charge of all sales of the merged company. He will be assisted by:

Clifford Crispin, former vice-president in charge of sales at MacMillan & Bloedel, now vice-president, wood product sales, advertising and trade promotion.

G. S. J. Bowell, formerly vice-president in charge of pulp and paper at MacMillan & Bloedel, now vice-president, pulp and paper sales.

- **J. E. Liersch,** former executive vice-president of Powell River Co., is named vice-president, pulp and paper production, forestry and timberland management. He will be assisted by:

W. C. R. Jones, a former vice-president of Powell River now a vice-president with responsibilities in pulp and paper production.

E. G. Shorter, formerly vice-president in charge of production at MacMillan & Bloedel, now vice-president, logging, wood product production.

Other appointments:

I. H. Andrews, a former vice-president of Powell River, now vice-president, planning, research and development.

G. D. Eccott, former vice-president in charge of finance and secretary, MacMillan & Bloedel, now vice-president, finance.

A. C. Kennedy, former vice-president in charge of industrial relations at MacMillan & Bloedel, now vice-president, labor relations.

J. A. Kyles, former vice-president and secretary, Powell River, now secretary and vice-president, administration.

H. P. J. Moorhead, a former vice-president of Powell River, now vice-president, engineering.

The wedding of two big forest industry firms cost an estimated $1 million.

It took about five months to conclude the amalgamation, which became effective Jan. 1, and many weeks before that to establish a workable basis.

Wood, Gundy & Co., which worked out the major details, receives a fee of about $200,000.

It's estimated another $350,000 would go to the dealer managers who solicited exchanges of M and B shares for Powell River shares, a technical step pre-requisite to the merger.

Much of the balance of the $1 million went into legal and audit fees.

U.K. Merger To Streamline Air Industry

While the Canadian aviation industry may not be directly affected by this week's merger of three more U. K. aviation firms, this streamlining of industry into more economic units will be carefully studied in Canada.

The firms of **Vickers Armstrong, English Electric** and **Bristol** are to amalgamate their aircraft and guided missile divisions.

Last month, two other leading British aircraft manufacturers, **Hawker Siddeley** and **de Havilland** announced plans to merge (**FP** Dec. 26, 1959).

The latest merger will result in a new company holding all shares of the three groups' subsidiaries, **English Electric Aviation Ltd., Vickers Armstrong (Aviation) Ltd.** and **Bristol Aviation Ltd.** Shares will be held in 40:40:20 proportions respectively.

A big item: The massive and costly job of complying with the regulations of Canadian and American stock exchanges, particularly with the very rigid regulations of the U. S. Securities & Exchange Commission.

Greenshields & Co. worked in Canada with Wood, Gundy as dealer managers. In the U. S. it was **White, Weld & Co.**, Wood, Gundy and Greenshields.

Various other investment houses took part in the job of urging clients to exchange their shares.

*"May I give you a lift to town?
I have a Tilden waiting"*

YOUR TAXES

An exclusive FP column of comment on the trends in personal and business taxation.

Employee Doesn't Owe Tax On Money He Gets for Move

By *JOHN G. McDONALD, LL.M.*
McCarthy & McCarthy, Toronto

A RECENT House of Lords decision concerning income from employment is interesting from the Canadian point of view.

Readers may recall that last year the Court of Appeal in England, in the case of **Hochstrasser v. Mayes,** held that reimbursements to employees of losses incurred on a move from one place of employment to another are not includible in computing income.

In this case **Imperial Chemical Industries Ltd.** had reimbursed the taxpayer employee for loss incurred upon the sale of his house following mandatory transfer from one employer establishment to another. The revenue authorities had argued that because the amounts reimbursed would not have been received but for the employment they were perquisites of the employment and taxable as such.

Rejecting this argument, the Court held that the fact that someone receives a benefit does not itself prove that what he received was a profit from the office.

This decision has now been confirmed unanimously in the House of Lords. The essential reason for the decision is that reimbursement of a loss does not constitute profit.

In Canada, we believe that the same result should be arrived at in view of the fact that section 5(a) of our Income Tax Act taxes "benefits of any kind whatsoever".

It follows that if an amount paid to an employee merely offsets his loss of equal amount, the employee has received no benefit "in virtue of the office or employment". The amount received is not a profit from the office.

Tax Appeal Board Dislikes Numbers

Under the Income Tax Act, a taxpayer who appeals to the Tax Appeal Board or to the Exchequer Court is entitled to have his case heard "in camera" — that is, in secret. The public are not permitted to attend an appeal held in camera.

The statute, however, says nothing about the manner in which the courts' decisions are to be reported.

Some years ago the Exchequer Court occasionally wrote judgments in such a way that the identity of the appellant taxpayer was concealed. In addition, these cases were reported under a number instead of under the taxpayer's name.

The Exchequer Court now uniformly refuses to preserve secrecy in publishing its decisions.

The Tax Appeal Board, however, still reports its decisions in secret form following "in camera" hearings, and the identity of taxpayers is thus concealed from the public.

In the course of following this practice, the Board has experienced difficulty in stating its reasons for judgment.

The chairman of the Board, in the recent case of No. 674 v. Minister of National Revenue, has indicated that the policy may be changed in the near future:

"As these appeals become more and more complicated from year to year, the time is fast approaching when the Board will have to reconsider its position in endeavoring to render judgments in 'in camera' form in addition to hearing the appeal in camera for which the Act makes provision."

While we are on this subject, we note that in the recent case of **No. 668 v. Minister of National Revenue,** counsel for the Minister of National Revenue, for the first time, requested that an appeal be heard in camera.

Normally, the Department of National Revenue is indifferent to the method of trial.

Tax on Discounts? It All Depends

The famous Cohen case in which the Exchequer Court held that mortgage discount is not income unless the mortgagee is in the business of lending money, was distinguished by the Board in **No. 667 v. Minister of National Revenue.**

Taxpayer No. 667 was a practising lawyer who advanced money on the security of first and second mortgages in consideration for interest at going commercial rates. In each case, the sums advanced were less than the face amount secured by the mortgages.

The Board held that ordinarily the discount received by the taxpayer would not be treated as income for tax purposes, but that in this case, the Cohen decision should not be followed because loans were obtained from banks.

This factor fixed the transactions with the "badges of trade", so that the taxpayer was really in the business of lending money.

Warn Appeal Board If Case Going Higher

Another procedural point of general interest involves the removal of pending appeals before the Board.

It is sometimes necessary to do this in cases originally taken to the Board when it becomes obvious prior to trial that in any event the case will go further.

By taking the case directly to the Exchequer Court, the expense of an extra trial before the Board is saved.

In the recent case of **Leiboff v. Minister of National Revenue,** Mr. Fordham points out that unless adequate notice is given to the Board of the intention to suffer dismissal of an appeal with a view to taking the case to the Exchequer Court, **extra expense and inconvenience is caused.**

The Board is not entitled to award costs in such cases, and therefore urges all persons concerned with tax litigation to give adequate advance notice if they do not intend to deal with a case on its merits in the Board.

Transport Labor Hot, Stand By for Trouble

MONTREAL (Staff) — The explosive transport labor field (**FP**, Jan. 9), is going to get even more complicated and tense.

The results could spill over the whole Canadian union complex.

One of the most important figures in Canadian labor, Frank Hall, chief negotiator for the 135,000 non-operating railwaymen, has served notice that he is going to demand expulsion of Jimmy Hoffa's hard-fisted Teamsters from Canadian Labor Congress.

He claims he has proof that the Teamsters have been raiding the membership of the railway clerks—Hall's own union.

In this move he has the enthusiastic support of William Smith, president of the Canadian Brotherhood of Rail, Transport and General Workers. Smith has made no secret of his ambition to rid the Canadian labor scene of Hoffa's friends and supporters.

If Hall and Smith have real evidence of Teamster misbehavior, CLC President Claude Jodoin faces a dilemma.

His congress cannot disregard open breach of its non-raiding rules — not if it is officially brought to its attention by two senior CLC members.

On the other hand expulsion of the Teamsters is at best an ineffectual way to handle Hoffa's powerful outfit.

For almost three years the far-reaching union has retained the best of health in the U.S., following its expulsion from AFL-CIO.

In fact it has been free to sign up anyone without the annoying problem of answering raiding charges—a very big advantage for a man like Hoffa who one day hopes to have union control of "everything that moves" in North America.

Jodoin has been subjected to considerable criticism for not taking action earlier against Teamsters and Hal Banks' troublesome Seafarers' International Union.

He finally threw SIU out, said his critics, when there was no further way of avoiding it.

Yet who gains if the Teamsters, SIU and other "maverick" unions get together to form a rival body to CLC?

That is the question that has tormented Jodoin and his CLC officers.

Teamsters' expulsion would leave a Hoffa-Banks consortium free to make its much-discussed bid to take over control of the Seaway, starting this summer.

It would also clear the way for high-pressure organizational campaigning in any industry that looks ripe for the taking.

This could mean a great increase in jurisdictional strikes and disputes.

And union men know that this would lead to increased public pressure for new labor legislation to make that sort of thing illegal.

It is possible that during the next week or two Hall and Smith will be urged privately to soft-pedal their charge.

The urging, if it comes, will be from union men who have no love for the Teamsters, but fear an open war with them.

However, neither Hall nor Smith is a weak man.

Both have made significant marks on the Canadian scene and have a reputation for thinking before they speak.

If they have made up their minds to take on the Teamsters, few men close to the labor scene expect them to alter course.

If CLC acts on their complaint, look for far-reaching repercussions across the entire Canadian industrial picture.

Any fight promises to be a big one that could quickly involve both government and management.

FRENCH ATLAS

The official Atlas of Canada, published early in 1959, is now available in a French language version. The atlas, prepared by the Department of Mines & Technical Surveys, Ottawa, contains 450 maps covering natural history, economic and social aspects of Canada. **It sells for $25 a copy, same price as the English version.**

CHEMICAL CONFERENCE

The 43rd annual conference and exhibition of The Chemical Institute of Canada will be held in Ottawa June 13-15. Upwards of 1,200 delegates are expected.

Letter from London

Fridges, tellies, cars are easily come by in the land of Never-Never . . .

By ADELPHI II

THERE WAS A TIME — and it is not so long ago — when it was considered in Britain a disgrace to be in debt.

The generally accepted rule was that if something could not be paid for in ready money it should not be bought at all.

Now a salesman or saleswoman in a shop would have a heart attack if a customer paid on the nail for a refrigerator or a television-set or, above all, for a motor-car.

Attitudes change and words change their meanings with them.

The never-never land of today has nothing to do with "Peter Pan".

It is the land in which more and more of the population live, which means that they are up to their necks in debt.

One result is that traffic in cities and towns is coming at certain hours almost to a standstill, because tens of thousands of people now own motor-cars who could not hope for one if they had to pay cash down.

We are told that two or three years hence there will be another million or so cars on the roads.

Then there will be no solution to the traffic problem.

London and other cities will not be able to move at more than a mile an hour during the day.

* * *

Nobody seems really to worry, especially as the Stock Exchange continues to be bullish.

The superficial explanation of this state of affairs is that our expanding economy justifies higher and higher prices for equities.

But that is far from being the whole story, and the situation is growing dangerous.

Why do equities persist in rising?

There have been phases in which the right answer would have been that they are bought as an inflationary hedge.

In the last 18 months, as the government proudly claims, there has been less inflation than at any time since the end of the war.

Yet equities show an average rise of 50% during that period.

So fear of inflation can be ruled out as an explanation of the persistent buying.

We must look for other influences.

In the first place, the available supply of equities (ordinaries) has diminished since some of our main industries and public utilities were nationalized.

Investors can no longer buy shares in electricity and gas undertakings, in coal companies and in railway companies.

Then the institutional investors, who formerly put only a minute percentage of their funds into equities, have reversed that policy. The Church Commissioners, County Councils, the insurance companies and Lloyds all buy equities in increasing quantities.

Prior charges are ignored. Preference shares are no longer preferred.

And soon it will be legal for trustees to put their funds into first-class equities, of which there is a desperate shortage here and now.

Other impressive buyers of equities are the Unit Trusts.

Unit Trusts, of course, are not a novelty.

In this country their beginnings date back several decades.

But the last year has seen an enormous extension of their activities, brought about by the constant efforts to persuade the "small investor" to take an interest in the stock markets.

Experts calculate that in the last five years the amount invested through the Unit Trusts has risen from £50 million to £150 million, and the process still goes merrily on.

* * *

The only other event of importance is the rash of Swastika signs and "Jews, get out" daubs that has broken out in London and some provincial places.

The newspapers played up the incidents for all they were worth, although it is obvious that this manifestation of anti-Semitism comes either from a few idiots or from the Communists acting in their customary role of agents-provocateurs.

There is no anti-Semitism in this country worth speaking of.

* * *

It is pleasant to be able to switch our attention to another uncontroversial subject, in the shape of Vincent Massey's book, "Speaking of Canada", which has been enthusiastically reviewed.

It is appropriate that it should be published here by the firm of **Macmillan**, as the head of the firm, Daniel Macmillan—like his brother, the Prime Minister — is an old Balliol man, and so is Mr. Massey.

Indeed, the Rt. Hon. Charles Vincent Massey and the Rt. Hon. Maurice Harold Macmillan are both honorary fellows of their old college, and they have both, curiously enough, abandoned the first of their baptismal names.

Another Canadian whom Balliol men of his era remember with great affection is Dana Porter, and they were delighted when he was made Chief Justice of Ontario.

The barristers who practice in his court are to be envied, for Dana is a genuine wit who can see the funny side of anything — even the funny side of the Common Law of England.

British Motor Exports Up 30%

British Motor Corp. export deliveries in 1959 set a new record, being 30% higher than in 1958, says Sir Leonard Lord, chairman.

Of 259,011 vehicles exported last year, 17,000 were shipped to Canada and 87,304 to the U. S.

Most popular BMC models in North America: The Austin A-55 and Morris Oxford. Among sports cars, the Austin-Healey and new MGA were good sellers.

LEGISLATURE LOOK-AHEAD

Something for Everyone In Coming B.C. Budget

By JAMES K. NESBITT

VICTORIA — Will the 1960 session of the British Columbia Legislature, opening Jan. 28, be a pre-election session?

That's the question everyone now is asking, but Premier Bennett, the only one who does know, isn't talking, and he'll be careful not to tell the Legislature what's in his mind.

Certainly, the premier has given every indication it will be a pre-election session.

He says the budget will be larger than last year and that was a whopping $300 million.

He says the budget will contain something good for everyone — Social Credit dividends, he'll call them.

What the dividends will be no one outside the cabinet knows. Because the cabinet of Mr. Bennett is a happy one, the ministers don't talk outside.

The premier says all the good things will be financed without any increase in taxation, because, he says, his government has wiped out British Columbia's debt, and is saving, in consequence, millions a year on debt charges.

However, the premier's political enemies admit that while he may have wiped out the direct debt, he has been piling up debt for such government bodies as the **B.C. Power Commission**, the **Pacific Great Eastern Railway**, the B.C. Highways and Bridges Toll Authority.

Certainly these bodies are borrowing more and more money and, while they're expected to pay their own way, their debt, in the long run, is the responsibility of the government.

The only government body paying its own way, and making a fat profit, is the Liquor Board — about $30 million a year.

This question of debt is going to be one of the explosive arguments of the coming session. It will be the key point in the election campaign, whether it comes later this year or in 1961. The last British Columbia general election was Sept. 19, 1956.

Labor matters, too, are bound once again to cause uproar in the legislature. Oppositionists, led by the CCF, insist the government is trying to throttle organized labor.

Teachers and their salaries will be argued. In school district after school district in B.C. teachers are receiving increased salaries, to such an extent the municipalities say they'll go broke, or have to increase taxes, unless the government takes over entire payment of teachers' salaries.

The government doesn't want to do it, and the teachers don't want it either, fearing that, in this way, they would become nothing more or less than civil servants.

Premier Bennett, this coming session, will try to prove that Social Credit is, in British Columbia, the only alternative to what he calls the CCF brand of Socialism.

The premier does not want any Liberal or Conservative in the legislature.

The government certainly has no fear of defeat on the floor of the House at the coming session. It has an overwhelming majority.

The line-up is: Social Credit, 38; CCF, 10; Liberal, 3; Independent Labor, 1.

There's not a Conservative in the House.

Neither the B. C. Liberal leader, Ray Perrault, nor the B. C. Conservative leader, Deane Finlayson, has a legislative seat.

The Labor Independent is 85 - year - old Thomas Uphill, who has been the member for Fernie since 1920, believed to be an all-time record in Canada for getting elected.

Government legislation will be outlined by the Speech from the Throne, to be read for his last time by Lieutenant-Governor Frank Mackenzie Ross, who retires next October.

Legislative social events will be brighter than ever this session, for the new $2 million Government House is operating, and there, the lieutenant-governor will give two elaborate state dinners and he and Mrs. Ross will give a glittering state ball for the "400" of British Columbia.

FINANCIAL REPORTING IN CANADA
(3rd Edition, 1959)

A study of the accounting aspects of the annual reports of 300 Canadian companies for the years 1955 to 1958 inclusive. More than 60 tables and accompanying commentaries show the current trends in financial reporting. (Members $4.00). $5.00

THE VALUATION OF PRIVATE BUSINESS AND PROFESSIONAL PRACTICE

A collection of important Canadian Chartered Accountant articles, this brochure is the most comprehensive and up-to-date discussion available on valuation and the treatment of goodwill. Among the topics covered are valuation of and accounting for goodwill; valuation of a privately owned business, a general insurance business, an accounting practice and a legal practice. Two chapters deal with valuation of a minority interest and earnings ratios in valuing companies. $2.00

THE FUNCTION OF MANAGEMENT

This brochure contains 11 articles written by business executives for business executives to explain what management is, and to give a better understanding of the techniques and methods by which top management is able to discharge its responsibilities. There are chapters on organizing for effective management; the objective of management; sales, production and financial planning; personnel administration and management reporting. Four chapters deal with various aspects of control. $2.00

Channel Isles French, Warm, Inexpensive

By BEATRICE RIDDELL

England has its rivieras too. And in the case of those in the Channel Islands, they are almost as French as Normandy only a few miles away, almost as warm as the Cote d'Azur.

Here the official language is French (Norman dialect is heard) although English is more commonly spoken. And place names, architecture, customs, cuisine are far more French than English.

The islands are not altogether like France's famous Mediterranean strip.

The atmosphere is "Norman feudal" in some areas, pastoral in others while towns are very like busy market towns of provincial France.

There is little of the Cote d'Azur's "haute monde" glitter.

But the islands are sunny and semi-tropical with about 700 species of wild flowers and better beaches than many you will find on the Mediterranean.

Although often considered part of the British Isles, the Channels are self-governing communities.

At the time of the Norman conquest they were part of the Duchy of Normandy.

But when Normandy was separated from England, the islands remained loyal to the English Crown and have continued to do so ever since.

Each of the major islands has its own parliament and governor.

Tiny Sark is ruled by a hereditary Seigneur or Dame.

Laws are based on the Grande Coutumier of Normandy, modified by centuries of island legislation and adoption of many British Acts of Parliament.

Long popular with British tourists, the islands are now attracting more overseas visitors.

Air service between the islands and the U. K. is as frequent as between Toronto and Montreal, while there are many steamer services from Southampton and Weymouth.

For travelers stopping here on their way to France, there is regular steamer service to the continent.

It will cost you approximately $35 to fly from London to Jersey or Guernsey and back again to London.

By ship from either of these islands to St. Malo on the French coast: $6.30 first class (one way).

Inter-island steamer or launch service is also frequent and inexpensive.

The two best-known islands—Jersey and Guernsey—have excellent hotels, golf links, tennis courts, yacht clubs (sailing is especially exciting), theatres, movies, etc.

Facilities here compare with England's Torquay or Bournemouth although the atmosphere is less "staid," more continental.

On the smaller islands, there are fewer hotels, but a number of comfortable and charming guest houses.

Daily rates throughout the islands range from about $2 for bed and breakfast at a guest house to a maximum of $7 for a single room with bath and breakfast at a leading hotel.

On Jersey and Guernsey there are plenty of motor cars and buses to take you on organized or independent island tours.

But on Sark, the horse-drawn buggy and bicycle are the only means of transportation.

Shops on the main islands are well stocked with continental luxuries.

Jersey, the largest of the group (8 mi. by 5½ mi.) is also the most southerly.

It lies in the sheltered bay of Mont St. Michel. From April to September the temperature compares with that of Bermuda.

The island's most famous landmark is the 16th century Elizabeth Castle, standing on a rock at the entrance of St. Aubin's Bay.

It is overlooked by St. Helier, bustling capital of the island.

Other points of special interest to the amateur historian or archaeologist are the castles of Mont Orgueil and Grosnez as well as La Hougue Bie, best preserved prehistoric monument in Western Europe.

Guernsey, one-time home of Victor Hugo, is 90 min. by boat from Jersey. Its climate is a bit more bracing than Jersey's but flowers bloom here all year long.

The chief town is St. Peter Port, dominated by the great Castle Cornet which dates from King John's day. But there are many other points of historic interest.

Alderney, separated from France only by a narrow channel, is two hours by boat from Guernsey. Only 3 mi. long it is more rugged than Jersey and Guernsey.

A little more "English" than its neighbors, it is less cosmopolitan than the two larger islands, but has more tourist amenities than Sark.

On Sark the scenery is wilder, cliffs steeper, roads narrower.

The west and south coasts are particularly spectacular.

Here, where the feudal system has remained intact, is a "get away from it all" spot with a slow-paced, specially quaint atmosphere.

These are the principal islands.

But there are others—many of them just islets.

Some are inhabited by lighthouse keepers and a few hardy farmers. A few are privately owned. But many are inhabited only by birds.

Botanically speaking, Jethou is one of the most interesting, being the home of white pimpernel and yellow-forget-me-nots. But there are many more close to the bigger islands and ideal targets for picnicing, picture-taking and swimming.

DON'T WAITERS get enough running? These men in St. Helier, Jersey, think their professional reputation is worth defending, in their colorful annual race. Of course, there's the fun of the thing — not to mention the refreshments and celebrations afterward.

France Drives For Tourists

Canadians visiting France in 1960 will find more and better winter sports resorts, new tours featuring rural France, new cultural tours in Paris and the provinces including visits to museums, theatres, porcelain factories, tapestry centres.

It's all part of an intensified campaign by the French Government Tourist Office and French transportation companies to attract more overseas visitors and to spread them out over the whole country.

This year two areas — Nice and the Savoie region of the French Alps — will celebrate the centennial of their unification with France with gala fetes and special festivals.

For visitors to Paris during the summer months (off-season for regular theatre, opera, ballet) a special summer festival is being planned.

Seasickness Gone Forever?

Mal de mer may soon be beaten.

But the latest hope for shipboard romances is more than a mere pill!

It's a new ship's stabilizer being tested by the U. K.'s **National Research Development Corp.** that lessens "pitch and toss".

Present stabilizers, highly effective in reducing ship's roll, have not yet beaten the greater force of pitch and heave, it's claimed.

NRDC, in its annual report, says it has tested a stabilizer in a minesweeper that has appreciably lessened the pitch.

The government corporation has decided to carry out further tests of its new stabilizer in a larger vessel, perhaps this year.

Travel Tips

INSTANT RESERVATIONS for Montreal's **Ritz Carlton Hotel** may now be obtained in Toronto through **Robert F. Warner, Inc.**

* * *

TCA HAS ANNOUNCED that when it introduces jet service (April 1 for domestic flights, June 1 for transAtlantic) fares will be the same as those for piston-powered planes. Surcharges for jet travel, now generally levied by other airlines, will not be introduced.

* * *

WITH THE OPENING of eight new hotels in Jamaica this winter, the island increases its tourist accommodation from 4,200 to 5,100 beds—biggest increase for any season on record.

* * *

SHORT WINTER CRUISES between Halifax and New York are available in **Cunard's** four sisterships Saxonia, Ivernia, Carinthia and Sylvania. Passengers may book one-way or round-trip voyages. One-way rates: $60 first class, $40 tourist.

* * *

ISRAEL HAS CONCLUDED negotiations with the **Sheraton Hotel Corp.** to build a 200-room hotel. Negotiations are also under way with **Hilton.**

SKI TOURS TO EUROPE are particularly popular this year. One three week jaunt organized by veteran ski tour operator Maurice Margesson of Toronto in co-operation with **Pan American** has been booked to capacity for six weeks. Departure date: Jan. 22. But many more are available through travel agents and international airlines. New resorts in Europe and improved facilities have made possible a bigger-than-ever selection of winter sports holidays. Typical all-inclusive price range for two weeks at two Alpine resorts of your choice: $135 to $326 plus air fare.

* * *

ECONOMY CAR rental rates for winter driving in Florida are being offered by **Avis Rent-A-Car System.** Available to April 15 in Miami, Miami Beach, Fort Lauderdale, Clearwater, Sarasota, St. Petersburg, Tampa, Orlando, Daytona Beach and West Palm Beach, special rates are offered in conjunction with any package tour. Weekly rate for a Ford Falcon, Studebaker Lark, Chevrolet Corvair or Rambler American comes as low as $36.95 including gas, oil, maintenance, insurance and 50 miles of driving.

U.S. Prediction: Department Store Sales Rising 5%

Special Correspondence

NEW YORK — Department stores can look forward to an increase in spring sales of 5% over last year, according to Harvard University Professor Malcom P. McNair.

Prof. McNair made his annual retail forecast at the annual convention here of the National Retail Merchants Association.

A number of Canadian stores are members of the NRMA. J. B. Morgan, president of Morgans, Montreal, was elected to the board of directors.

Strongest area for sales is in apparel, said McNair.

Consumer willingness to buy is favorable and interest in better quality merchandise seems to be spreading.

An expected decline of 15% in private housing may affect home goods to some degree but lower food prices may permit some diversion of spending from that area.

Gross margin performance should be a little better, Prof. McNair said because the merchandise mix of purchase will be favorable, prices, will be firm.

There should also be a small improvement in the percentage of earnings to sales.

However, Prof. McNair cautioned that inflation, deflation, the balance of international accounts and labor management strife are issues to be faced in the 1960's quite possibly early in the decade.

Possibly late this year or sometime next year "we may be faced with a downturn of the more or less normal inventory cycle," he said, "and simultaneously have to cope with a downturn in the much longer and only vaguely apprehended cycle which embraces these problems."

The depression resulting from such a coincidental downturn might well be the one that George Humphreys said would really curl your hair.

"I am not predicting this," he said, "but I might be willing to give odds that the next business readjustment in the U. S. will be more severe than any of the preceding ones in the postwar period."

The convention also heard Dr. W. K. Dolva, dean of the School of Business of Western Reserve University declare that retailing needs better educated employees.

"Retailing needs and deserves academic attention," he said. **"Retailing is the most expensive institution of the whole marketing structure.**

"It is the largest employer of labor outside of manufacturing. Usually it takes 60% of the national income.

"If we are to increase the standard of living in U. S., the greatest potential lies in reducing the cost of retailing.

"Academic study and research can lead to lower cost. Retailers have been laggards in utilizing college trained personnel."

Dr. Dolva said average family income will be $8,600 by 1965 and $9,500 by 1970.

As a result the U. S. businessman can look forward to the largest markets and the fastest rate of growth ever in the next 10 years.

He warned however that "seat-of-the-pants" management or "management-by-crisis" which has so long prevailed in retailing must be tossed out for careful planning and for better educated personnel.

Bobcat Delay Bad News For Lakehead

MONTREAL (Staff) — Postponement of a decision to put the Bobcat into production is bad news for Fort William (**FP**, Dec. 19).

Although the versatile, amphibious, tracked carrier was being engineered by **Canadian Car Co.** at Montreal, it had been planned to produce it at Can-Car's Fort William plant.

Following failure of Bobcat standardization talks with the U. K., the Canadian government has deferred a decision until late summer at least.

It would appear now that if the Bobcat goes into production at all it will be strictly a Canadian venture.

The door is not yet closed on joint Anglo-Canadian production, but this is unlikely.

Talks between U. K. and Canadian teams broke down during the NATO ministerial meeting in Paris last month. Previously the Bobcat had been discussed in Ottawa Oct. 29 and 30.

Informal island living!

OCEAN REEF
Country Club Community in the Florida Keys

All the attributes of secluded island living in this ocean-to-bay community just 55 minutes from Miami by highway! Paved roads completed, utilities installed; spacious lots reasonably priced with realistic restrictions.

Regulation golf course (one of Florida's finest!), private beach, lagoon-pool, harbors and marina, boating on intracoastal waters and ocean. Hotel and villas, dining room, shops. Paved airstrip only minutes from Miami International Airport.

55 minutes south of Miami by highway — 40 miles by boat — 30 miles by air — airport with 2500' paved runway

Company Report

Mining

RAYROCK MINES had a net loss of $153,284 in the year ended Oct. 31, 1959 (net profit of $70,438 in preceding fiscal year).

Mining operations were stopped on July 31, 1959, after an accelerated development program failed to turn up new ore.

To July 31, 23,834 tons of ore were milled from which 152,401 lb. of U_3O_8 were recovered (40,888 tons and 243,407 lb. respectively in previous year).

As result of announcement by **Eldorado Mining & Refining** last November, that companies with uranium contracts could negotiate inter-company transfers of contract-quantities, Rayrock has arranged to buy sufficient oxide to fill its contract from **Gunnar Mines.**

Purchases will begin this month and will mean a gross profit to Rayrock of over $5 million, says President J. C. Byrne.

Rayrock has set up an exploration department which began activity last summer and examined 24 properties in Canada and the U. S. Company also holds interests in oil acreage in Alberta.

Co-op Credit Plan Grows in Ontario

Budget plan of the Ontario Co-operative Credit Society has expanded to include 60 local co-op stores out of a potential of about 100 in Ontario (**FP**, Aug. 15, 1959).

In its first half-year, the plan has helped members of local organizations buy some $100,000 worth of merchandise.

The budget plan was instituted to fill a gap where credit unions do not provide equivalent services.

Argus Corp. Asset Value Up

Asset value of common stock of **Argus Corp.**, Toronto, has appreciated considerably since Nov. 30, 1959, when it was $43.71 per share, E. P. Taylor, president, stated at the annual meeting.

The companies which represent Argus' major investments, in the aggregate, are making progress, he said.

Earnings on the whole are showing substantial improvement over the preceding year.

New NRO Fund To Be Launched

MONTREAL (Staff) — Look for a new U. S. mutual fund to set up shop in Canada shortly.

The fund — whose name has not yet been disclosed — will invest in Canadian securities. It will have Canadian co-managers.

Shares in the open-end fund are intended for sale primarily to U. S. investors.

At present the fund is in process of obtaining registration from the U. S. Securities & Exchange Commission, **FP** understands.

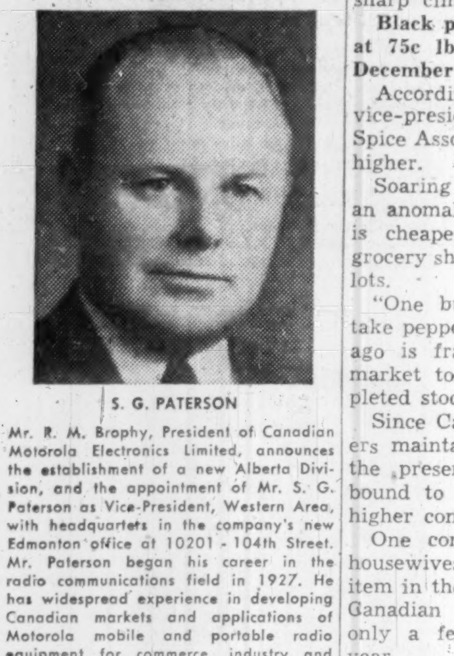
ANNOUNCEMENT

CANADIAN MOTOROLA ELECTRONICS LIMITED ANNOUNCEMENT



S. G. PATERSON

Mr. R. M. Brophy, President of Canadian Motorola Electronics Limited, announces the establishment of a new Alberta Division, and the appointment of Mr. S. G. Paterson as Vice-President, Western Area, with headquarters in the company's new Edmonton office at 10201 - 104th Street. Mr. Paterson began his career in the radio communications field in 1927. He has widespread experience in developing Canadian markets and applications of Motorola mobile and portable radio equipment for commerce, industry and public utilities.

TAPE PUNCHER

A new device aimed at reporting transactions and sales from branch offices to a central data processing system has been developed by **Burroughs Corp.**, Detroit. The tape-punching machine can be operated by any person who can use an adding machine or cash register, the firm says.

Manufacturing—Moving—Insurance
they all have one thing in common ... greater efficiency through EDISON

Goodyear Tire and Rubber

We at Goodyear Tire & Rubber had our Edison Dictation System installed last September and we're sold on it. Before, we had 15 sets that served 17 of our personnel. Edison came in and designed us a system of 2 central units that service 45 of our staff, plus 3 sets for travelling. We were able to realize a 50% saving in our investment . . . we have faster service . . . better service, and it's more efficient. We like Edison, their sets are well engineered and we've found they really build equipment to suit our individual needs.

Peter Mackie,
MANAGEMENT ENGINEER
Goodyear Tire and Rubber Company of Canada, Ltd.

Tippet-Richardson Ltd.

We at Tippet-Richardson have had dictating equipment in our office since 1928. We've used many makes. In the moving business we have no product to sell—it's a straight service, we've got to be efficient to make money. In April we asked several companies for proposals on a new system. Edison won . . . they designed a televoice system for our company. We like the Edison equipment—the girls work easier, there are fewer mistakes, the work goes through faster. We had an efficient operation—Edison increased our efficiency.

Walter W. Naylor,
VICE PRESIDENT
Tippet-Richardson Limited

A. E. Wilson and Company

Our Edison System was installed in September, 1958. It was especially designed for our firm and consists of 18 Edison stations and 4 individual Edison Voicewriter machines. We asked two firms to make proposals for electronic dictation systems. Edison won, and we're pleased. With Edison we are able to process substantially increased volume with no increase in staff. Edison has speeded our operation, increased our efficiency and we are able to save several thousands of dollars annually—after paying for the equipment.

W. A. Howard,

Nobody's Sneezing At Pepper Prices

Wholesale tag has shot up to 75c lb., and it's going still higher . . .

MONTREAL (Staff)—Nothing to sneeze at is the current sharp climb in pepper prices.

Black pepper now wholesales at 75c lb. against 60c in late December and 24c a year ago.

According to Jack Lewis, vice-president of the Canadian Spice Association, it will go still higher.

Soaring values have created an anomalous situation: Pepper is cheaper by the pound on grocery shelves than it is in carlots.

"One buyer who refused to take pepper at 44c a few weeks ago is frantically chasing the market today to replenish depleted stocks," said Lewis.

Since Canadian pepper packers maintain small inventories, the present tight situation is bound to be reflected soon in higher consumer values.

One consolation for harried housewives: The spice is a tiny item in the family food budget, Canadian sales amounting to only a few million dollars a year.

Reasons for the runaway prices:

- **Increased** world demand, particularly in Eastern Europe.
- **Delays** in moving the Indian crop to market.
- **Sharp cutbacks** in the Indonesian crop.

These developments have created a precarious supply and demand position. According to some observers there are only 50,000 tons in sight to meet 1960 world demand of 70,000 tons.

Others charge the situation has been aggravated by a syndicate of Singapore speculators who allegedly have achieved a corner on the commodity. This is denied by the **Wan Tong Trading Co.**, big Singapore dealers.

India, the world's largest producer, expects a bumper crop of 60 million pounds this year but none will be available for several months. Normally reaped in November and December, the crop is as much as two months late.

Meanwhile the Russians have acquired new preferences for spiced food and they will be bidding for a substantial share of the Indian crop.

Russian purchases were higher in 1959 than in any other postwar year and apparently the Soviet will continue to be an expanding outlet.

Indonesia will produce only 22 million tons this year, down 40% from 1958.

It takes about six years for peppercorns to mature and during periods of political strife and depressed prices growers were letting the berries rot on perennial vines while they planted grain.

Black pepper is produced by grinding the entire peppercorn. White pepper is a grinding of the inner portion after the husk is discarded.

According to one trader there will be no great supply of white pepper available until midsummer.

Tor.-Dom. Bank Makes Promotions

Bid to Link Farm Groups Lays an Egg in Manitoba

From Our Own Correspondent

WINNIPEG — Prospects for a united front in Manitoba farm organizations are dimmed by a clash between the Manitoba Federation of Agriculture and the Manitoba Farmers Union on egg marketing.

Seven organizations interested in the poultry industry met in Winnipeg and agreed to ask Federal Agriculture Minister Harkness to fix a "disaster floor" for egg prices — high enough to curb undue losses to producers and low enough to prevent overproduction.

This was to be in addition to the present deficiency payment program which the groups said doesn't prevent wide fluctuation in open market egg prices.

The MFU had three representatives at the meeting, one of its vice-president, a member of its poultry committee, and the chairman of its marketing board committee who seconded the motion to ask for the "disaster floor".

None expressed opposition to the decision of the meeting and two supported it by vote.

Immediately after the request was sent to Ottawa, the MFA says, the MFU withdrew its support when President Rudy Usick declared it contrary to policy.

"The MFU", says a release by the federation, "must be prepared to accept its share of responsibility for present conditions facing egg and hog producers.

"Present government policies of deficiency payments and quotas on production represent a leaf right out of Farm Union policy and the union should accept responsibility for its errors and seek reasonable solutions instead of trying to dodge issues.

"Recent Farm Union statements like that which followed the meeting called by the federation to deal with egg marketing problems can only have the effect of torpedoing any hopes Manitoba producers might have of getting a better deal.

"It would appear Mr. Usick is more interested in Farm Union policy than in helping producers.

"By his unilateral action in wiring Mr. Harkness he has irreparably harmed relations between the two farm organizations and can only have succeeded in convincing the minister of agriculture that farmers really don't know what they want.

"It is the belief of the MFA that much of the present trouble in the egg industry stems from the type of deficiency payment program now in effect and which was requested by Farm Unions.

"They have consistently asked for deficiency payments based on what they term "cost of production" and just as consistently have refused or neglected to supply any figures which could be considered an appraisal of the cost."

The incident is another of the series to indicate that farm unity in the province hasn't made much progress since it was optimistically proposed in 1954.

In that year the MFA at its annual meeting in Brandon named a committee to study proposals whereby the two organizations might work more closely and eventually amalgamate.

Later a similar committee was named by the MFU.

By 1956 a proposed amalgamation scheme was tentatively decided.

A special meeting of the federation in February 1957 in Winnipeg and attended by 1,200 delegates, rejected it.

The move to join the two groups as "Organized Farmers of Manitoba" was thrown out.

Several reasons were advanced:

- **The new organization didn't** give merited space or recognition to farm co-ops.
- **It didn't accept** the Candian Federation of Agriculture as the national farm organization.

At infrequent intervals since there have been hopes the two groups might get together.

In recent months the gap seems to have widened.

Edmonton Lures Bus Riders With Music and Bargain Fares

From Our Own Correspondent

EDMONTON — Soft music and bargain adult fares at off-peak hours will lure more patrons to Edmonton's faltering bus system.

It had a $50,000 deficit on last year's operations.

Unless some major relief is given in the form of more revenue, a deficit of $100,000 in 1960 is feared by civic officials. Wage increases are a prime factor.

City council has authorized D. L. MacDonald, superintendent of the **Edmonton Transit System**, to spend up to $50,000 on various experiments to put the bus system in the black.

One step, effective in January, is the sale of 20-ride books of adult tickets for $1, or $1.50 (regularly $2.50) for use at slack periods, including evenings, Sundays and holidays.

Regular tickets at 20 for $2.50 would be used during rush-hour periods.

The bargain tickets would be good from 9.30 a.m. to 4 p.m. and after 6.30 p.m each day

The superintendent also has suggested addition of certain "amenities" to attract bus patrons during slack hours

One of these is soft, high quality recorded music.

Another suggestion to be put in operation this spring is the replacement of feeder bus operation by taxis retained by ETS to transport passengers from a mainline "station".

Under this system, taxis would be available at special fares in off-peak hours to take suburbanites between their homes and a major bus terminal.

Another experiment will be to pick up persons during the rush hours right at their offices and deliver them to a suburban area without stops.

Later, the service could be expanded to mornings and take employees right to the door of their offices.

During January, ETS also plans to begin ring-road service. Buses will skirt the downtown area and touch major city points outside this area, such as shopping centres and hospitals.

CNR Deficit Shows Drop

MONTREAL (Staff)—Net operating deficit of **Canadian National Railways** in November was $2.5 million. That is $5.5 million less than $8 million for the same month the year before.

Revenues increased to $58.2 million from $56.1 million in November, 1958. Expenses were lower — $60.6 million compared with $64.1 million. However during November, 1958, $9.3 million was set aside for retroactive wage increases to non-operating employees.

The figures show:

	November 1959	1958	Increase
		000 $	
Op. rev.	58,161	56,098	2,063
Exp., taxes & rts.	60,637	64,068	*3,431
Net op. inc. ...	2,476†	7,970†	5,494
	11 mos. from January		
Op. rev.	674,980	640,970	34,010
Exp., taxes & rts.	678,783	660,255	18,528
Net op. inc. ..	3,803†	19,285†	15,482

*Decrease.
†Deficiency.

DEMOLITION PROGRAM

A demolition program in Waterloo, Ont., will see 10 acres of old buildings removed from the downtown commercial area. They will be replaced by a multi-million dollar mall-type shopping development. Project is said to be unique in many ways and is being closely observed by authorities throughout Ontario in the governmental and commercial fields.

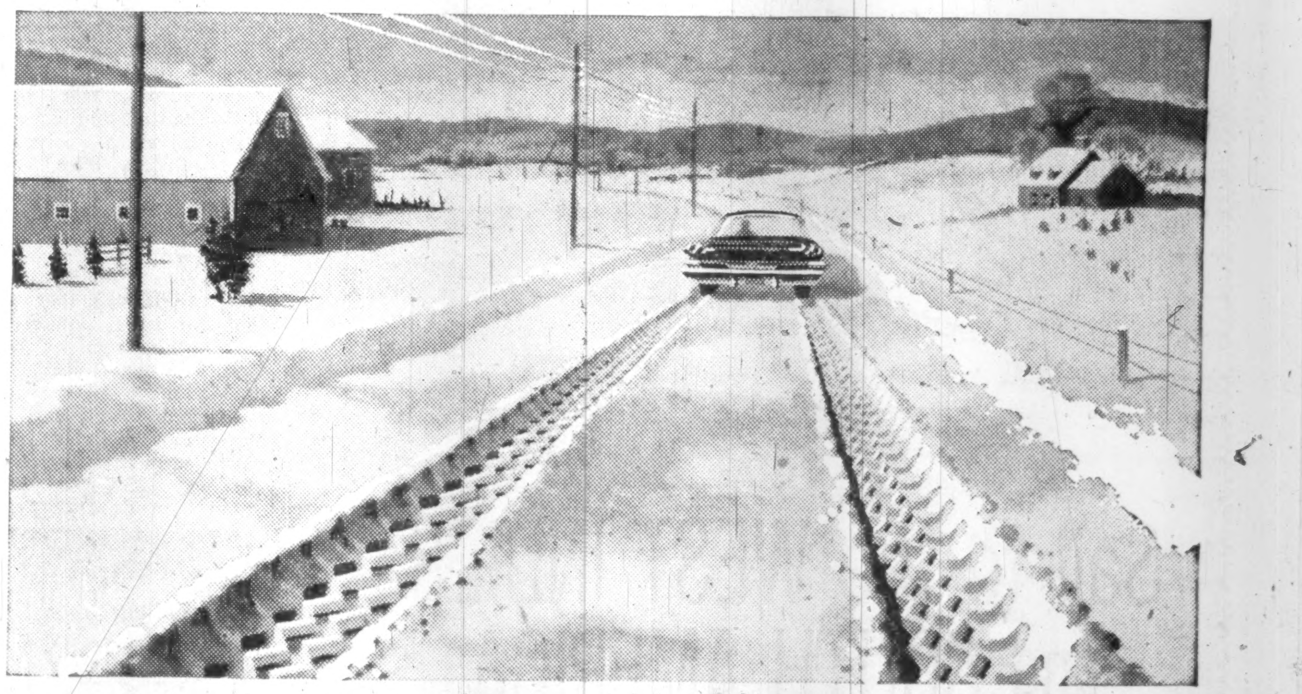
Perhaps the
nicest Avis 'extra'
is a little
extra care



Avis equips every car with Firestone Nylon 500 "Town and Country" snow tires, heavy-duty battery and heater to give you summer-like driving all winter.

Winter business-driving can take you almost anywhere. That's why you need a car that starts at lowest temperatures, gets you through some pretty deep snow and one that keeps you comfortable. You can be sure an Avis car will measure up on every winter-driving count. Each has rugged snow tires, heavy duty battery, heater and freeze-proof automatic windshield washer. They're *standard* on every Avis car. This week and all winter, drive a safe, sure, winterized Avis car.

Avis RENT-a-CAR

Pessimism, Slack Bleak Background To Coal Hearings

MONTREAL (Staff)—Against a black background of dwindling operations and increased pessimism, Canada's Royal Commission on Coal soon will begin its hearings.

Hon. Ivan C. Rand, dean of the University of Western Ontario Law School and former member of the Supreme Court, will conduct the one-man inquiry, starting in the West and covering all coal-producing areas in Canada.

As mining companies, provincial governments and other interested parties prepared their briefs, one startling fact stood out like a billboard on a meadow:

Canadian coal production in 1959 was at a 50-year low.

Output was 10.7 million tons against 11.6 million in 1958 and 19.1 million in 1948.

Imports have sagged too. In 1948 Canadian imports were more than 30 million tons. Last year they were 13.3 million, about the same as in 1958.

While the flow of U. S. coal, which enjoys the big advantage of lower-cost mining, has been a factor in slowing sales of Maritime Provinces coal in Central Canada, other fuels are providing stiffer competition.

Hydro-electric power, oil and natural gas have made serious inroads into coal's traditional markets.

Gas, a newcomer to energy supply in hungry Central Canadian mass markets, is gaining fast.

Says Albert L. Fairley, Jr., president of **Dominion Steel & Coal Corp.**:

"Already substantial losses to natural gas have been felt in Central Canada and with construction of further pipelines throughout this area, natural gas will continue to displace further tonnages of Dosco coal."

Dosco, the big Nova Scotia producer, has sold $870 million worth of coal since 1939 "without making a dime." Company's subsidiary, **Dominion Coal Co.**, lost $1.8 million last year.

To put its operations on a firmer financial foundation, Dosco would like to close three uneconomical Cape Breton pits.

But this is a drastic measure that will be accepted by Nova Scotia "only as a last resort," according to Premier Robert L. Stanfield.

Dosco sees an upswing in use of coal in the next decade and is "hopeful that Mr. Justice Rand will be able to come up with recommendations to the federal government that will enable the coal industry to be put on a more secure footing for the long-term future."

New Brunswick's submissions to the Rand Commission probably will parallel those to the New Brunswick Royal Commission on Coal.

Headed by Prof. W. Y. Smith of the University of New Brunswick, this provincial commission is expected to recommend further mechanization of shaft mines in the Minto fields and help for strip mine operators in financing larger draglines.

Smith's report is expected to be released late this month.

Meanwhile the mood in western coal mining districts is more optimistic than in the East.

"The western mines have taken the worst of their beating and are beginning to see rays of hope in a shaken down and readjusted industry," said W. E. Uren, chairman of the Dominion Coal Board.

"Virtually all the industry's troubles in the West can be attributed to oil and gas, the resources which are bringing the western community vastly increased wealth and numerous new employment opportunities.

"A community does not feel too badly if it loses a few dollars from its coal mining pockets while thousands of new dollars are pouring into other pockets."

Alberta likely will request more assistance in selling coal to Japan which needs coking coal to meet the demands of its expanding steel industry.

Last year the subsidy on Crow's Nest coal was raised 50c a ton to $4.50 but operators feel a further boost is necessary to meet U. S. competition in the Japanese market.

Saskatchewan's lignite industry faces fierce competition from natural gas and, spokesmen contend, its position has been undermined by substantial increases in transport charges which it has passed on to customers.

Last year's rate increase was 22c a ton.

Lignite men want subventions comparable to those on other coals. Main market is Winnipeg.

Inquiries of the Rand Commission will extend principally to these terms of reference:

- **Present and future markets for coal** in the various regions of Canada.
- **Steps that can be taken to reduce production** and distribution costs.
- **Steps the Canadian coal industry can take to maintain itself** on an economic basis.
- **Measures that can be adopted by governments to support the economic production** and distribution of coal.
- **Economic and social consequences** of cessation of mining operations in different districts.

The big job will be to recommend a framework in which long-range stability can be brought to the industry without dislocating coal area economies in the meantime.

Dealerships Open For Russ Watches

Like to sell Russian watches? The Soviet Union has a surplus of watches and would love to find a Canadian distributor.

One difficulty: A distributor would be dealing with the Soviet state rather than a private firm.

A spokesman at the U.S.S.R. Embassy in Ottawa says the watches are as good as Swiss watches.

The line of men's and women's watches will be available in stainless steel, chromium, gold plate and 18-karat gold.

In the U. S., the Russians have incorporated a company named **Amtorg** to handle some distribution operations.

This company has been advertising in New York newspapers for distributors to handle their "line" of watches.

Expected U. S. price range: $19 to $60 retail, plus applicable taxes.

In Canada prices would probably be about the same, since in both countries a 30% tariff applies.

In any case, the Russians say they would adjust prices to suit the situation.

Being a state-trading nation this isn't too difficult.

The Russians have not set up a company similar to Amtorg here, so potential distributors will have to deal with the commercial division, Russian Embassy, Ottawa.

Irish Airlines Buys Radar From Canada

MONTREAL (Staff) — **Irish Airlines** has bought nine Canadian-designed doppler radar navigation sets for its new transAtlantic jets.

Worth some $155,000, this is the third major airline order won by **Canadian Marconi Co.**

Pan American World Airways and **KLM Royal Dutch Airlines** are the other buyers (**FP**, Jan. 17, 1959).

At present the Irish line flies between New York and Ireland, but airmen expect an application will be made fairly soon to extend service to Canada.

Canadian Marconi's equipment, which allows accurate navigation beyond the range of ground aids, is leading in the international sales race right now.

At mid-week another foreign line had been signed up, but Marconi wasn't revealing its name.

The possibility of future civil and military sales looks bright for the equipment.

Perth Shoe Co. Leases Plant For Expansion

The leasing of a 27,000 sq. ft. plant at Alexandria, Ont., south of Ottawa, means further expansion of **Perth Shoe Co.**, Perth, Ont.

Perth Shoe obtained the lease from **Josef Augstein Ltd.**, Montreal, on a four-year contract. Company purchased the leasehold improvements and hopes to buy the property eventually, President Eric M. Sabiston told **FP**.

The plant will be used for the manufacture of children's shoes. It is located on 10 acres of land, allowing ample room for expansion.

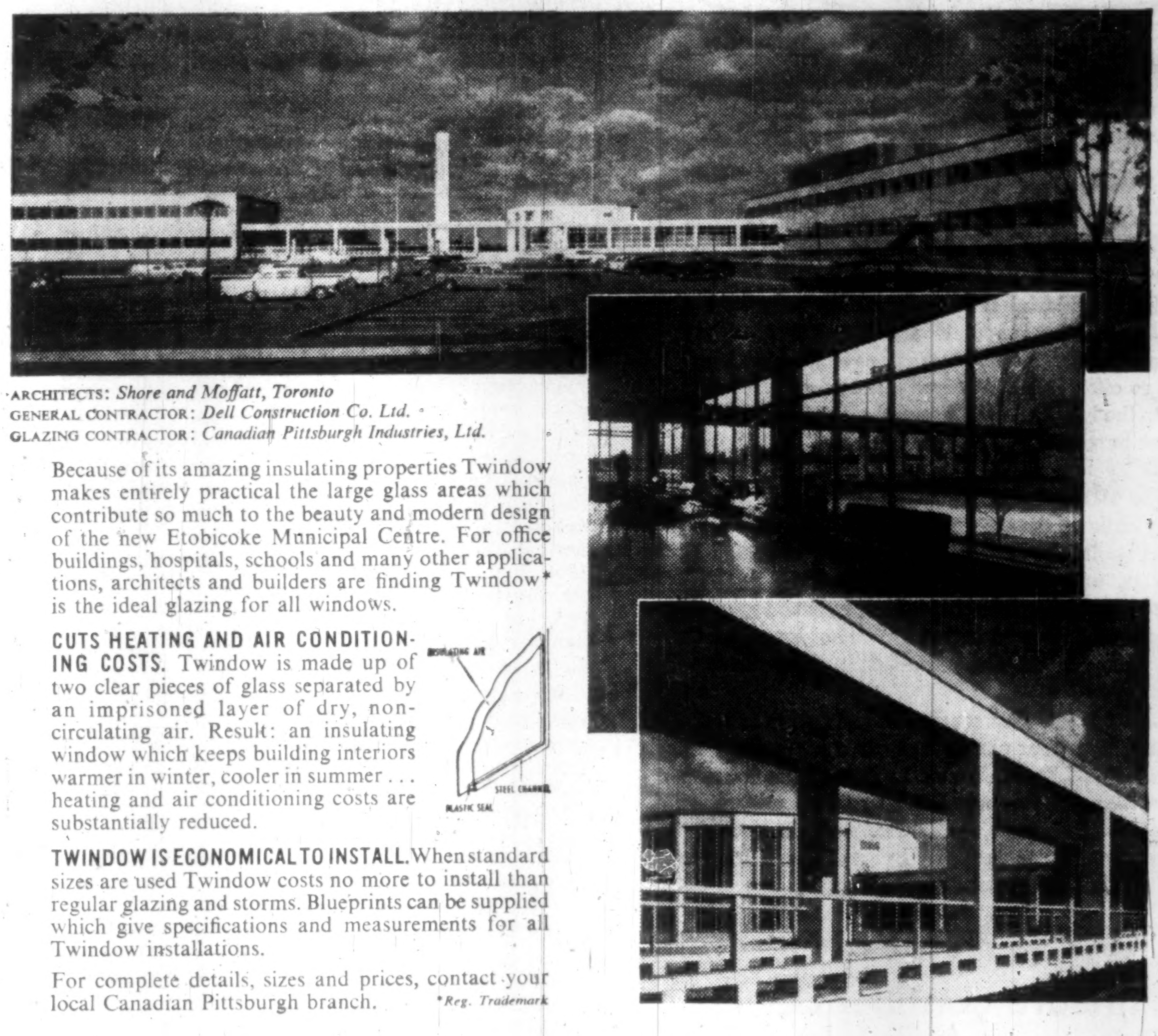
Perth Shoe hopes to employ some 200 people at Alexandria when plant is operating fully this summer.

The U. S. **Brown Shoe Co.**, St. Louis, Mo., recently acquired a controlling interest in the privately-owned Perth Shoe Co. and its wholly-owned subsidiaries, **Lockwedge Shoe Co.**, near Perth, and **Scott Shoe Co.**, Galt.

For six years prior to the transaction, Perth Shoe manufactured a number of Brown's footwear lines under license in Canada.

Perth Shoe employs some 400 people in the Perth area and at Galt in southern Ontario.

TWINDOW keeps heating and air-conditioning costs low at the new Etobicoke Municipal Centre



ARCHITECTS: *Shore and Moffatt, Toronto*
GENERAL CONTRACTOR: *Dell Construction Co. Ltd.*
GLAZING CONTRACTOR: *Canadian Pittsburgh Industries, Ltd.*

Because of its amazing insulating properties Twindow makes entirely practical the large glass areas which contribute so much to the beauty and modern design of the new Etobicoke Municipal Centre. For office buildings, hospitals, schools and many other applications, architects and builders are finding Twindow* is the ideal glazing for all windows.

CUTS HEATING AND AIR CONDITIONING COSTS. Twindow is made up of two clear pieces of glass separated by an imprisoned layer of dry, non-circulating air. Result: an insulating window which keeps building interiors warmer in winter, cooler in summer . . . heating and air conditioning costs are substantially reduced.

TWINDOW IS ECONOMICAL TO INSTALL. When standard sizes are used Twindow costs no more to install than regular glazing and storms. Blueprints can be supplied which give specifications and measurements for all Twindow installations.

For complete details, sizes and prices, contact your local Canadian Pittsburgh branch.

proved, preferred and expansible
for growing needs—a full range of
Burroughs electronic computers

From giant computers and peripheral equipment to desk-size computers, the Burroughs line of advanced data processing equipment is now at work in varied applications throughout business, science and industry. Its range is broad. ● For example, if you require giant computer ability, select the *Burroughs 220*, first and only available medium-priced computer with expansible magnetic core storage . . . a powerful multi-purpose system which can grow with your computational requirements. The *220* is now at work delivering effective results at the lowest application cost. ● If your present application demands are more moderate, select the versatile *Burroughs 205*, first in its field with magnetic tape storage . . . a complete choice of input/output media with flexible, modular expansion, top capacity and speed. The *205* has thoroughly proved its economic value in a wide variety of applications. ● Most popular of all low-cost computers is the *Burroughs E101*. With its exclusive, simple pinboard programming the E101 reduces manual computation time by as much as 95%. Its ability is further extended by optional punched paper tape input/output and punched card input equipment. ● Burroughs advanced sub-systems include: *Datafile* magnetic tape unit with vast storage capacity . . . up to 50 million digits per unit; *Cardatron*—fastest, most powerful card handling system; *220 High Speed Printer System*—a transistorized unit with unmatched speeds to 1,500 lines per minute, on-line or off-line operation. *High Speed Photoreaders, Magnetic Tape Units* and other computer system components also are finding wide use in data processing, communications and allied fields. ● Currently in production, all these Burroughs products are part of a complete and advanced line helping users save time and solve problems. An outstanding team of computer specialists can give you efficient, on-the-spot technical assistance. ● Call our nearby branch office or write Burroughs Adding Machine of Canada, Limited, Toronto, Ontario.

Anyone interested in discussing professional sales career opportunities representing the most complete line of data processing equipment available in Canada, should address inquiries to Mr. J. L. Rapmund, General Manager.

Burroughs
"NEW DIMENSIONS / in electronics and data processing systems"

H. P. SKOGLUND, President

Skog says...

"Point your child in the right direction"

How wonderful it is to hear the parents of a newborn baby speculate about its future. "He's going places," or "big things are in store for her," are so often heard. Naturally, not all children live up to the high expectations of their parents. On the other hand, some far exceed them.

The start is most important and should "point your child in the right direction" for the future. A good beginning includes proper food, clothing and shelter, an education, and the instilling of high moral standards through good example and spiritual guidance. It should include plenty of love as well. You will provide all these things in good measure.

But you can also reach into the future to make certain that your child will have clear guideposts. The NALAC Family Insurance Plan and its Scholarship Plan are two ways to insure that your great hopes will become a reality. Planned insurance can give direction to your daydreams . . . and to your child. Call us for details, won't you?

...insure confident living

Stock, Bond Prices in 1960

Some key predictions on the trends ahead . . .

- ***Stock prices in 1960:** An early dip, then a market boom reaching new highs.*
- ***Bond prices:** Moderately lower prices, higher yields and borrowing costs.*
- ***Business conditions:** A 6½% increase in GNP and industrial production, new strength in the consumer sector.*

Those are key predictions on 1960's trends, made recently before a Toronto group of investment men and economists, by three of the group's members. Opinions are not necessarily those of the group.

Here are digests of the forecasts of the three members who were asked for predictions on the coming year's trends:

Stocks

The supply of new common stock issues coming to market will have an important bearing upon 1960 stock prices. I don't expect Canadian equity issues to reach the 66% of total corporate financing it achieved in the abnormal first three-quarters of 1959, but I think one can look for substantial increases in the absolute amount of equity financing in both Canada and the U. S. in 1960 and early 1961.

We will see a much more competitive decade, with the resurgence of Europe, competition from Russia, and the development of excess capacity at home all playing their part. Canadian stocks no longer have a monopoly in the field of romance, and growing ranks of wallflowers will undoubtedly sit out the dance in the sixties.

We should also look for less inflation in the sixties. Fewer foolish business mistakes will be skated onside by rising prices. Labor will also lose some of its power. Monetary policy will be more stringent and fiscal policy more flexible — which should make for milder recession but also for much more moderate booms.

Against this sort of economic background for the sixties as a whole, business conditions for 1960 and 1961 look very promising. An increase of some 6%-7% in U. S. and Canadian gross national product is the most likely probability, with exports and business capital spending being the main driving forces.

The prospect seems to be that per-share earnings will rise by something like 3% a year in the sixties. Stocks therefore seem over-valued, and will have to have a day of reckoning eventually.

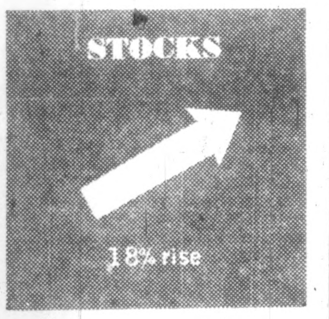
However, total corporate earnings for 1960 itself may increase by 15%, with dividends rising by only 4% due to the need to conserve cash.

My conclusions are that the supply of new issues may exert a mildly damping effect on the market, but that the highly competitive nature of economic conditions in the sixties and the over-valued level of stocks will not greatly influence investors' minds this year — partly due to the sharp rise in corporate profits.

There will be considerable concern about the late 1960 or early 1961 recession in the first half of the year, followed by renewed confidence when such a development fails to materialize.

I look for the Dow-Jones industrial average to back down to the 575 range in the early part of the year, and to rebound to its high point of just over the 800 mark at the year-end.

I think the balloon will burst in 1961 when more moderate economic growth and a small decline in corporate profits may drive home some old-fashioned truths to investors.



For the Canadian market as measured by the Toronto Stock Exchange industrial index, the correction may be more moderate in view of the weaker forward movement it has had in the last two years and also because of a slackening in selling pressure from nonresident-owned mutual funds.

I therefore forecast a low on the TSE industrials of 460 reached within the first half of the year, followed by an advance comparable to that of New York to a high point of 625 at the year-end.

Western Oils, already pretty well deflated, will react in sympathy to a low of 88 and should recover to a high of 130, closing the year at 127.

The Base Metal index will decline to 147 at its low, will rise to a high of 204, and will close the year at 193.

The Gold index will be its usual undynamic self in the absence of any revaluation in the price of gold, and will hit a low of 82, a high of 94 at about the time of the International Monetary Fund meetings, and will close the year close to its present level of 89.

Bonds

There are times when Canadian monetary policy and fiscal policy depart significantly from U. S. trends, but I do not believe that 1960 will be one of those times. On the contrary, I think our bond market will be extraordinarily influenced by U. S. developments.

With a comparatively neutral fiscal policy in Canada and a pretty clearly indicated attitude on the part of the central bank, our interest rates will follow the U. S. pattern very closely.

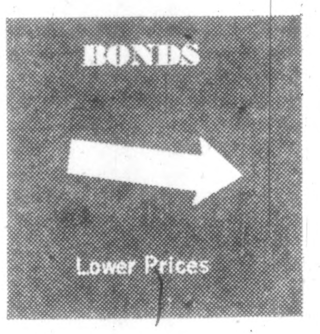
Given the ceiling rate which can be paid by the U. S. treasury on its long-term obligations, U. S. interest rates in the three-five year maturity range will probably reach 6%.

Beyond the five-year range, long-term rates apart from U. S. Treasuries will tend to rise but only moderately, owing to the vacuum created by the lack of long-term government issues.

Short-term rates will also go somewhat higher, with U. S. Treasury Bills moving upward to perhaps 5½% during 1960 at some point.

In Canada, two senior cabinet ministers and the governor of the central bank have indicated an increase in GNP in 1960 running to perhaps 6% or 7%. Assuming such an increase, commencing from a pretty full level of employment, it must follow that there will be pretty heavy pressure on our capacity to produce.

This implies a continued demand for bank loans, for other forms of short-term borrowing, and for capital funds in all forms. Business capital investment is expected to rise in 1960, and there will be some major public financing for certain industries, especially natural gas pipelines.



Few corporations will be able to borrow at less than 7%, at least in the first half of 1960. Provinces will probably have to pay between 6½% and 7%, and most municipalities will be in the 6¾% to 7½% range.

In the shorter end, a most important factor is the improvement in the government's budgetary position. It looks as though the cash budget will be on a balanced basis shortly, perhaps by the end of the current fiscal year.

Any improvement in the budgetary position will tend to be reflected in the short end rather than in the medium or long end. While short-term rates might rise a bit from their present levels, we will continue to have the current normal yield curve, with short-term rates remaining generally under medium and longer term rates throughout 1960.

Business

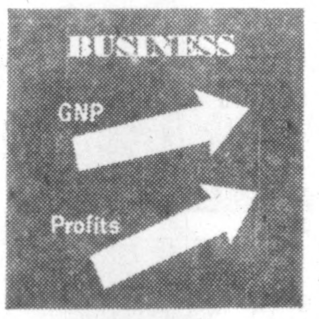
General economic indicators point to a good year for business in 1960.

Canada's population should show the same growth rate — 2.3% — in 1960 as in 1959. This would bring year-end population to 18,088,000, from an estimated 17,683,000 at Dec. 31, 1959.

The 1959 rate of increase in personal income — 7% — should also continue throughout 1960, bringing the total for the year to $27.9 billion compared with 1959's $26.1 billion and 1958's $24.4 billion.

A third strong element in the 1960 business picture will be consumer expenditures. Growing population, rising personal income and a modest increase in consumer prices should have the effect of boosting consumer expenditures to $23,750 million. This would be a 7% increase over 1959's estimated $22,190 million, which in turn was up 5.6% from $21,012 million in 1958.

This forecast is based on an assumption that the consumer price index, averaged over the full year 1960, will be 129.4 or 2.3% higher than 1959's 12-month average of 126.5. The 1959 price rise tapered off in November and December; index for those months was 128.3 and 127.9. My forecast of a 1960 average index of 129.4 suggests only a 1.2% rise from last month's consumer price level.



Adding strength to the consumer sector will be a drop in unemployment. Average unemployment, over the full year 1960, should be 320,000 or 5.3% of the labor force. This is 8.6% lower than the 1959 average of 350,000 or 6% of the labor force.

Peak unemployment will be 443,000 or 7.2% of the labor force. This would be a drop of 8.2% from the 1959 peak of 538,000 unemployed, or 8.9% of the labor force.

Average employment should rise by 3% to 6,055,000, from 5,878,000 in 1959. Last year, the rise was 2.7% from the 5,722,000 people at work in 1958.

When these elements are put together, they point to a 7% increase in retail sales, to $14,280 million from $13,346 million in 1959. The 1959 growth rate was 5%, from $12,710 million in 1958.

While the consumer sector should be particularly strong, the rate of growth in other sectors may not be as great. There may be some stretch-out in government spending, although industrial expansion and installation of machinery and equipment may grow at a faster pace than in 1959.

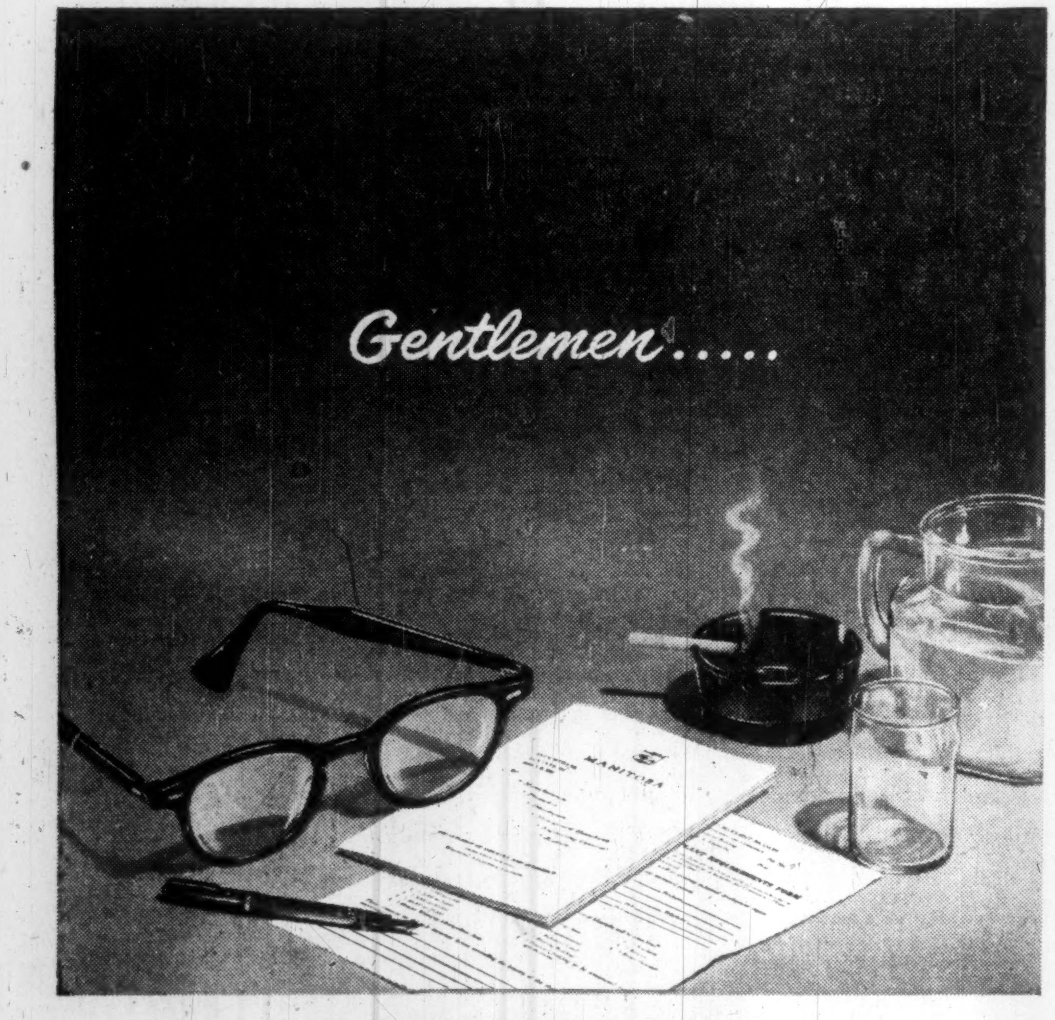
On balance, it appears that public and private investment will rise by 1.3%, from $8,545 million in 1959 to $8,656 million in 1960. The 1959 increase was 1.5% over 1958's $8,417 million.

Housing starts will probably decline again, by 11.1% to 120,000 in 1960 from 135,000 in 1959. Last year's starts were 18% fewer than the 1958 peak of 164,600.

Housing completions will show a drop of 10.2% to 123,000 this year, from 137,000 in 1959. This is a greater decline than last year's, when completions fell by 6.6% from 1958's 146,700.

The index of industrial production for the year should average 173.6 (1959: 100), up 6.5% from last year's average of 163.0. The gain in 1959 was 6.8%, from 1958's 152.6.

Summing up the various elements, I would predict that Gross National Product will rise by 6.5% to $37 billion, from $34.7 billion in 1959. Last year's rate of growth of GNP was 6.8%, from $32.5 billion in 1958.



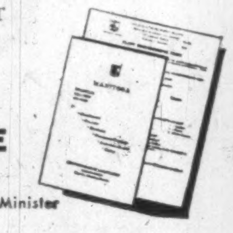
how MANITOBA Canada helps you select the most advantageous location for your new plant or branch

■ The Manitoba Department of Industry and Commerce maintains professional Industrial Location Services geared to assist companies find the right site for their needs.

■ Working closely with private consultants and research firms, the Department's teams of specialists assess Manitoba's economic advantages, raw materials, natural resources, provincial and local regulations, site evaluation, community planning and other factors, in terms of your specific industry or company need.

■ A location study tailored to your requirements is quickly launched (through confidential channels, of course) upon receipt of a detailed Plant Requirements Form filled out by your company.

■ SEND for your complimentary copy of "MANITOBA'S INDUSTRIAL LOCATION SERVICES" a complete account of the technical assistance available through the Department, and the unique method of making loans through the Manitoba Development Fund — as well as the specially prepared PLANT REQUIREMENTS FORM.



DEPARTMENT OF
INDUSTRY & COMMERCE
Legislative Building, Winnipeg, Manitoba, Canada

HON. GURNEY EVANS, Minister
R. E. GROSE, Deputy Minister

University of Alberta Department of Extension

PHOTO INTERPRETATION FOR THE PETROLEUM INDUSTRY

Southern Alberta Jubilee Auditorium, Calgary
January 25th-29th, 1960

- Part A — Photo interpretation and its applications to problems in the petroleum industry.
- Part B — Photogeology and photogrammetry. Of special interest in exploration studies.
- Instruction By
  Dr. J. D. Mollard (Regina)
  Dr. V. C. Miller (Denver)
  Prof. A. J. McNair (Cornell University)

Course activities take place daily, 9:00 a.m.-4:30 p.m.

- Fees — Part "A" only $70.00, Part "B" only $40.00. Combined total fee of $100.00 per student.

•

APPLIED PHOTOGRAMMETRY AND AIRPHOTO ANALYSIS

St. Stephen's College, University of Alberta, Edmonton
February 1st - 5th, 1960
Daily from 9:00 a.m. - 4:30 p.m.

- Principles of Photogrammetry, production of topographical maps from airphotographs. Photo interpretation in route locations, searches for sand and gravel, municipal engineering investigations, groundwater studies, irrigation surveys, site selection, land use studies.
- Instruction By
  Dr. J. D. Mollard (Regina)
  Prof. A. J. McNair (Cornell University)
- Fee for the course is $100.00 per student.

•

- Workbook—A workbook of classic air photographs set up for stereoscopic viewing has been especially prepared for use in connection with these courses. A copy of this book will be made available to each student in the Calgary (Part A) and Edmonton courses, and it is expected that it will be of continuing value to them as a reference book.
- Write to Director of Extension, University of Alberta, Edmonton, Alberta, for full details and advance registration form.

ANNOUNCEMENT

SIMPSON APPOINTMENTS

C. B. STEWART

J. C. CLEMES

J. C. Clemes has been appointed assistant to the vice-president, Merchandising, Simpsons, Limited and C. B. Stewart general manager of Simpson's Toronto Store, it is announced by G. Allan Burton, vice-president and managing director of Simpsons, Limited.

Mr. Clemes has been with the company nearly 24 years, starting as manager of the Basement Store in 1936, becoming store merchandise manager in 1951 and assistant general manager in 1955. For the past two years he has been Toronto store general manager.

Mr. Stewart joined Simpson's Montreal Store in 1936 and became fashion supervisor there in 1945 and assistant general manager a year later. He was appointed manager of the Halifax Store in 1947 and for 4 years was manager of Simpson's European buying offices in London, England. He became assistant general manager in Toronto in 1958.

ANNOUNCEMENT

NEW LEVER PRESIDENT

JOHN C. LOCKWOOD

John C. Lockwood, 46, has been named President, Lever Brothers Limited, effective November 30, 1959, and will direct the company's national operations from headquarters in Toronto. A senior marketing executive with the company from 1946 to 1956, Mr. Lockwood returns to Canada following a 3½-year posting as Managing Director of Lever S.A., Brussels, Belgium. He succeeds Mr. H. Greenway who has retired from business for health reasons.

Israel Good Spot For Our Capital, Says Study Group

Members of this Canadian mission to Israel see surefire growth ahead . . .

Members of a Canadian study mission who recently toured Israel are enthusiastic about prospects for investment of Canadian capital in Israeli enterprises.

"The long-term growth prospects are a lead-pipe cinch," says Ralph Fisher of **Fisher, Sanders Stern & Nisker,** Toronto accountants. "The country has only one way to go.

"The Israeli government is anxious to do everything in its power to help you make a go of it.

"You might not get your hands on the profits immediately but you can always parlay them in other industries."

Fisher was a member of the United Jewish Appeal Study Mission that toured Israel during the last two weeks in November.

"During the past few years a number of Canadian enterprises have made investments in Israel and there is every prospect that this trend will continue at an increased rate in the future," Fisher says.

"Aside from the fact that Israeli law provides all kinds of concessions and inducements to foreign investors, there is the more important consideration that many of the foreign investments—such as paper, tires, and oil—have proved profitable.

"Assuming political stability in the area, additional capital will be drawn there."

Bertram Loeb of **Independent Grocers Alliance** with several partners recently established Israel's first supermarket in Tel Aviv.

The enterprise has been so successful he is planning a chain of supermarkets throughout the country.

"It is interesting to note," Fisher says, "that in spite of the pressure on the government by Israeli interests, they did not hesitate to give Loeb every aid and encouragement in this project which has revolutionized Israel's retail food trade by forcing local merchants to improve their services and lower prices."

Most of the Canadians in the mission made investments of their own in Israel:

- **Ted Richmond of Nortex Products Corp.,** Toronto, furniture manufacturers, came to an agreement with an Israeli collective settlement by which he plans to invest in their furniture factory.

Richmond, who already ships Canadian-made furniture to Europe, figures he would have a considerable advantage in shipping and other costs by manufacturing in Israel.

- **J. I. Oelbaum,** who has a variety of commercial interests in Toronto, including **Acme Paper Products Co.,** is considering an investment in several construction projects in Israel.

- **Harry Sherking of United Tire Sales,** Toronto, is interested in establishing a tire retreading plant in Israel.

Israelis trade in their automobiles less often than in North America, creating a considerable demand for retread service, especially for taxis.

There is only one small retread firm in the country at present.

- **During a visit to a crystal glass factory at Beersheba,** the mission was so impressed with the efficiency of the enterprise and the high quality of its products that all members of the mission decided to make a joint investment in the factory.

Fisher says:

"The high proficiency of Israel's labor force, the considerable investments made in the development of transport, roads, natural resources and electricity, growing experience in international trade and marketing and the comparative security which Israel now enjoys, leads me to believe that the next decade will be a period of economic consolidation and steady growth in which foreign investment will play an increasingly important role."

Israel's major export to Canada is polished diamonds which in 1958 amounted to about $1.5 million.

A group of Canadian investors have recently organized **Yolam Gems Ltd.,** under the chairmanship of Barney Aaron, a former Canadian and prominent Israeli, to expand this aspect of Canada-Israeli trade relations.

Other Israeli exports to Canada: Citrus, textiles, wine, religious articles and souvenirs.

Value of Israel's exports has grown from $29.7 million in 1949 to $144.3 million in 1958.

Nearly 75% of Israel's exports went to hard-currency markets such as the U.S., U.K., Germany and Switzerland.

Major Canadian exports to Israel are wheat and automotive parts, amounting to about $3 million a year.

RALPH FISHER, member of the 1960 Toronto United Jewish Appeal Study Mission to Israel checks a camera distance reading before taking a photo of a young lad at Beersheba. Others of the Mission (l to r): Laurence Shankman of Consolidated Building Corp.; Harry Sherkin of United Tire Sales and Nathan Hennick of Marvel Jewellery.

Officers Report Their Holdings

Among the changes in security holdings reported by the U.S. Securities & Exchange Commission covering reports filed with the SEC between Nov. 11 and Dec. 10 by company officers, directors and large shareholders were the following:

They Bought

S. H. J. Belither, director, bought 100 shares of **Calgary & Edmonton Corp.,** increasing his holding to 8,000 shares.

A. H. Meadows, officer and director, bought 200 shares of **Fargo Oils Ltd.,** increasing his holding to 8,200 shares. **General American Oil Co. of Texas,** in which he has an interest, holds 2,182,186 shares.

Eric M. Butler, officer, bought 500 shares of **International Utilities Corp.,** through exercise of option, increasing his holding to 2,000 shares. Mr. Butler's wife owns 2,870 company shares in her own right.

John C. Dale, director, bought 200 shares of **International Utilities Corp.,** increasing his holding to 800 shares.

William F. Egan, officer, bought 150 shares of **International Utilities Corp.,** through exercise of option, increasing his holding to 600 shares. Mr. Egan's wife owns 30 company shares in her own right.

Loblaw Groceterias Co., bought 1,000 shares of **National Tea Co.,** increasing its holding to 2,344,071 shares.

Joseph H. Hirshhorn, director, bought a total of 29,000 shares of **Prairie Oil Royalties Co.,** between December 1956 and March 1958, increasing his holding to 415,926 shares.

They Sold

M. B. de Sousa Pernes, director, sold 500 shares of **Aluminium Ltd.,** reducing his holding to 2,500 shares.

Bart W. Gillespie, officer, sold 4,500 class B shares of **Home Oil Co.,** reducing his holding to 1,675 shares.

Earl A. Killian, officer and director, sold 2,000 shares of **Jupiter Oils Ltd.,** reducing his holding to 78,500 shares.

Changes in security holdings reported by the New York and American Stock Exchanges covering reports filed since Dec. 10 by officers, directors and large shareholders of companies listed on the exchanges included the following:

They Bought

Walter C. Forbach, director, bought 5,100 shares of **Molybdenite Corp. of Canada,** increasing his holding to 33,400 shares.

Compania de Bonos Acciones y Negocios Industriales S.A. bought 1,200 shares of **Patino of Canada,** increasing its holdings to 758,067 shares.

D. Hubert Cox, officer and director, bought 2,000 shares of **Thorncliffe Park Ltd.,** increasing his holding to 11,050 shares.

They Sold

Robert L. Reed, officer and director, sold 3,000 shares of **Britalta Petroleums Ltd.,** reducing his holding to 58,659 shares.

Abacus Fund distributed to shareholders as a dividend 25,671 shares of **Gatineau Power Co.,** reducing its holding to 213,922 shares.

ONE VIEW OF THE MARKET

Excelsior Life Increases Common Stock Portfolio

Excelsior Life Insurance Co. increased its holdings in 10 common stocks and added another 10 to its list, a report on its Dec. 31, 1959 holdings shows.

New issues included **Algoma Steel Corp., Dominion Tar & Chemical** and **Banque Canadienne Nationale.**

Four common stocks were eliminated, including **Aluminium Ltd.** and **Maritimes Mining,** and four others reduced.

Holdings of **Massey Ferguson** 4½% preferred were liquidated and the 5½% convertible preferred purchased. One other preferred was eliminated.

Here are the changes in detail on the company's stock holdings:

	Shares held at Dec. 31 1959	Change since Dec. 31 1958
Preferred stocks:		
Massey Ferguson 5½%	370	+370
Do., 4½%	nil	—100
Tennessee Gas 4½%	nil	—200
Common stocks:		
Algoma Steel	3,000	+3,000

A-Power Small Beans Until 1970 or Later

Nuclear power will not become an important source of world energy until after 1970.

This appeared to be the opinion of experts at the first Canadian conference on uranium and atomic energy in Toronto this week.

Various degrees of optimism or pessimism were sounded during a panel discussion of "The Future of Atomic Energy," but none of the views offered much hope to Canada's troubled uranium industry.

J. L. Gillams, of the U. K. Atomic Energy Authority, summed it up thus:

"The position of the uranium industry may indeed be difficult for a considerable part of the next 10 years; but the long-term prospects still seem good."

Excerpts from the talks by panelists and other speakers follow:

Dr. G. C. Laurence, director of reactor research and development, Atomic Energy of Canada Ltd.: After 1962 we expect that CANDU type nuclear plants will be chosen as economically competitive (with conventional power plants) for southern Ontario and possibly elsewhere.

"The first such plants should begin producing power about 1967.

"That first economic nuclear power station in southern Ontario will be followed by others.

"These will be quite large units, at least 250,000 hp each, because only quite large units would be competitive with coal-fired stations in that part of the country.

"Smaller power stations will be competitive where present power costs are higher, as in Nova Scotia.

"So by 1970 we may expect a growing use of nuclear energy for central generating stations in some parts of Canada. **Thus, by 1975, I can imagine several million horse power of nuclear power station capability in Canada.** The fuel required for these plants would be several hundred tons of uranium oxide per year — a quantity that is small in comparison with the present output of our mines."

Dr. John Davis, director of research and planning, B. C. Electric Co., was less optimistic and held that nuclear energy will do well to become economic in Canada by 1970.

"The world is not really running out of its more conventional sources of energy.

"Granted that millions of barrels of oil, billions of kilowatt hours of electricity and trillions of cubic feet of natural gas are being used up every day.

"At least twice as much may be required by 1970. But let us not lose sight of the fact that some other fuels are actually losing ground.

"Oil is on the crest of the wave. Today it supplies better than 40% of all the world's energy requirements.

"Yet, with consumption doubling every decade we still have more oil on our hands than we know what to do with.

"The world's proven supplies are now equal to about 40 years of consumption at the present annual rate of use.

"As for the more distant future, we know we can still fall back on the vast oil shales of Colorado or the tar sands of Northern Alberta.

"Most geologists believe that the world's ultimate potential (of natural gas) can be measured in thousands of trillions of cubic feet.

"Moving over greater distances and becoming ever more firmly entrenched as the preferred fuel for space heating, steam raising and heat treating purposes, it bids fair to overtake not only coal, but oil in many of the latter's traditional markets."

Dr. Davis said the competitiveness of nuclear power may be delayed by the tendency of the cost per kilowatt hour of conventionally-produced power to decline over the past decade.

"On this continent the effective cost of buying coal, oil and natural gas for the generation of electricity dropped from four mills in 1948 to three mills per kwhr in 1959.

"And the end is not in sight. One authoritative study suggests that 'conventional fuel costs will not increase by more than 15% or 20% over the next quarter century'.

Dr. Davis said the operating costs of reactors can be improved with lower fuel costs and improved technology.

"The price of uranium oxide will go down anyway. It could drop from $10 to $4 or $5 a lb.

"We can expect a further shake-out when the present mine contracts expire in 1966."

"Where the shoe really pinches is in respect to capital costs.

"Each project has started out well enough. But as construction progressed and the bills were paid, the original forecast has been revised upward."

Canada's 20,000 kw nuclear power demonstration reactor was expected to cost about $600 per kw in 1955, Dr. Davis said.

"The latest release suggests that it may cost more like $1,600 per kw of capacity.

"Due to alterations in design, completion date has also been shifted from 1959 to 1961."

Dr. Davis also questioned whether the savings resulting from the nuclear research program would justify the costs.

He calculated a benefit-cost ratio of about 1.5 to 1.

"Various analyses carried out in the U. S. suggest that, for research in general, the benefit-cost ratio may be something like 20 to 1.

"Nuclear power . . . therefore looks less entrancing."

Canadians should be interested in the benefit-cost ratios of spending money on long-distance transmission, unlocking the vast amounts of energy tied up in Alberta's tar sands, or better methods of processing uranium and other mineral resources, he said.

W. Kenneth Davis, vice-president Bechtel Corp., contractor for the Dresdon power plant in the U. S., said:

"It appears possible to build large nuclear power plants in high fuel cost areas of the U. S. today which will prove to be economic over their useful lives.

"Within a few years nuclear power will be competitive with conventional steam power plants in the U. S. on a general basis."

J. L. Gillams, of the U. K. Atomic Energy Authority, said:

"The prospect of competitive nuclear power in the U. K. within the next 10 years is good.

"We may therefore expect a really large nuclear construction program in the U. K. during the 1970s.

"Fuel requirements will rise correspondingly. Almost all the fuel will be uranium but much of this may have to be taken in a form already enriched to about 1 or 1½% in U235."

Corbin Allardice, adviser on atomic energy, International Bank for Reconstruction and Development, Washington, D.C., said:

"World energy demands have now increased to the point where full exploitation of both fossil and hydraulic energy resources must be undertaken.

"Even more importantly for our purposes here today, world energy demand forecasts for the year 2000 indicate the absolute need for development of non-conventional energy resources.

"The rapid worldwide expansion of demand for electricity, which on the average doubles every 10 years, is particularly striking.

"The non-conventional resource most likely of early practical application, particularly to the generation of electricity, is atomic energy.

"The earliest applications of atomic energy must, because of cost features, come in the more highly industrialized areas of North America and Europe and, in the Far East, in Japan.

"In these areas, atomic energy might be called upon to supply perhaps 25% of total production of electricity within 20 years — an amount of production about equal to the present total electric production in those areas from all sources.

"For such a substitution to occur, atomic energy will have to be shown to be economically competitive with alternative sources of energy within the next decade.

"I believe it will be shown to be so, and perhaps demonstrated so much sooner than that."

Congressman C. E. (Chet) Holifield, ranking Democrat member of the Joint Committee on Atomic Energy, said:

"In the short range the uranium industry is capable of supplying substantially more uranium than will be needed to meet both military and civilian demands.

"Uranium producers must adjust to this situation and prepare for the competitive market which will apply to uranium sales above and beyond those being made under existing contracts.

"Although the whole world has a stake in the rapid development of nuclear power, the uranium producing countries have an added reason for pressing for soundly conceived, vigorous programs aimed at reducing the lag between developmental efforts and commercial power production."

CAIRNGORM TEST

Following completion of the dewatering of the Beaver Silver workings in the Port Arthur area of Ontario, **Cairngorm Mines** plans to carry out detailed channel sampling. Dewatering of the five levels to permit the first underground sampling since 1891, is scheduled for year end completion.

What to Look For In Nuclear Power

Here are some developments to watch for in nuclear energy in Canada.

- **Announcement of an expanded co-operative program between the U. S. and Canada** on heavy - water - natural uranium reactors.
- **A decision in perhaps six to eight months to proceed with the final design and construction of an organic cooled heavy water experimental reactor** (OCDRE) in Manitoba with a power output of around 40,000 kw.
- **This may be followed a few years later by a full-scale power plant** of similar design with a capacity of about 150,000 kw and scheduled for completion about 1968.

Atomic Energy of Canada Ltd. hopes this will be accepted by the Manitoba Power Commission.

- **Award of a large contract for steam turbines for Canada's first full-scale nuclear energy plant,** CANDU near Kincardine on Lake Huron.

Four or five bids have been received by AECL from Canadian and U. K. firms at prices regarded as "good".

Best bet to win: A U. K. firm.

- **A proposal in two or three years that Canada build an experimental steam cooled heavy water moderated reactor,** perhaps jointly with the U. K. government and industry."

J. L. Gray, president, AECL, says that if such an experimental reactor is built and works well, it would be followed by a prototype and then a full-scale plant.

He speaks of large plants — around 500,000 kw — that could operate on natural uranium, but might prove more economic with some fuel enrichment.

- **Don't expect Canada to build an enrichment plant in the near future.** In the opinion of AECL scientists it costs too much.

Said Dr. G. C. Laurence, director of reactor research and development, AECL:

"We shall prefer to import whatever enriched fuel we need because our needs, together with the markets we might capture abroad, will not be great enough to make production in Canada economically profitable."

- **Before the time of completion of CANDU in 1964 or 1965,** a decision to build additional nuclear power stations to serve southern Ontario.

The expanded U. S. - Canada co-operative program, in addition to the mutual use of reactors and nuclear facilities, will include 10 specific areas of research and development.

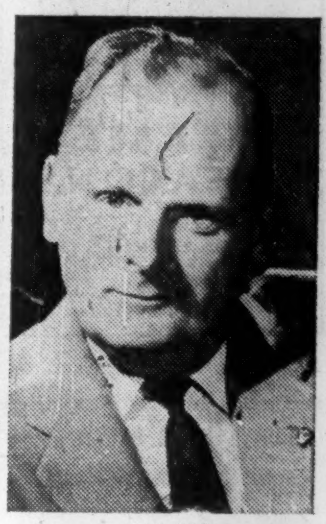
These include improved fuel elements, improved pressure tubes, improved components and seals, and improved engineering techniques for reducing capital costs of heavy-water-natural uranium reactors, according to Congressman C. E. (Chet) Holifield, chairman of the sub-committees of the Joint Congressional Committee on Atomic Energy.

ANNOUNCEMENT

SAVINGS & INVESTMENT CORPORATION APPOINTMENTS

G. B. MOORE

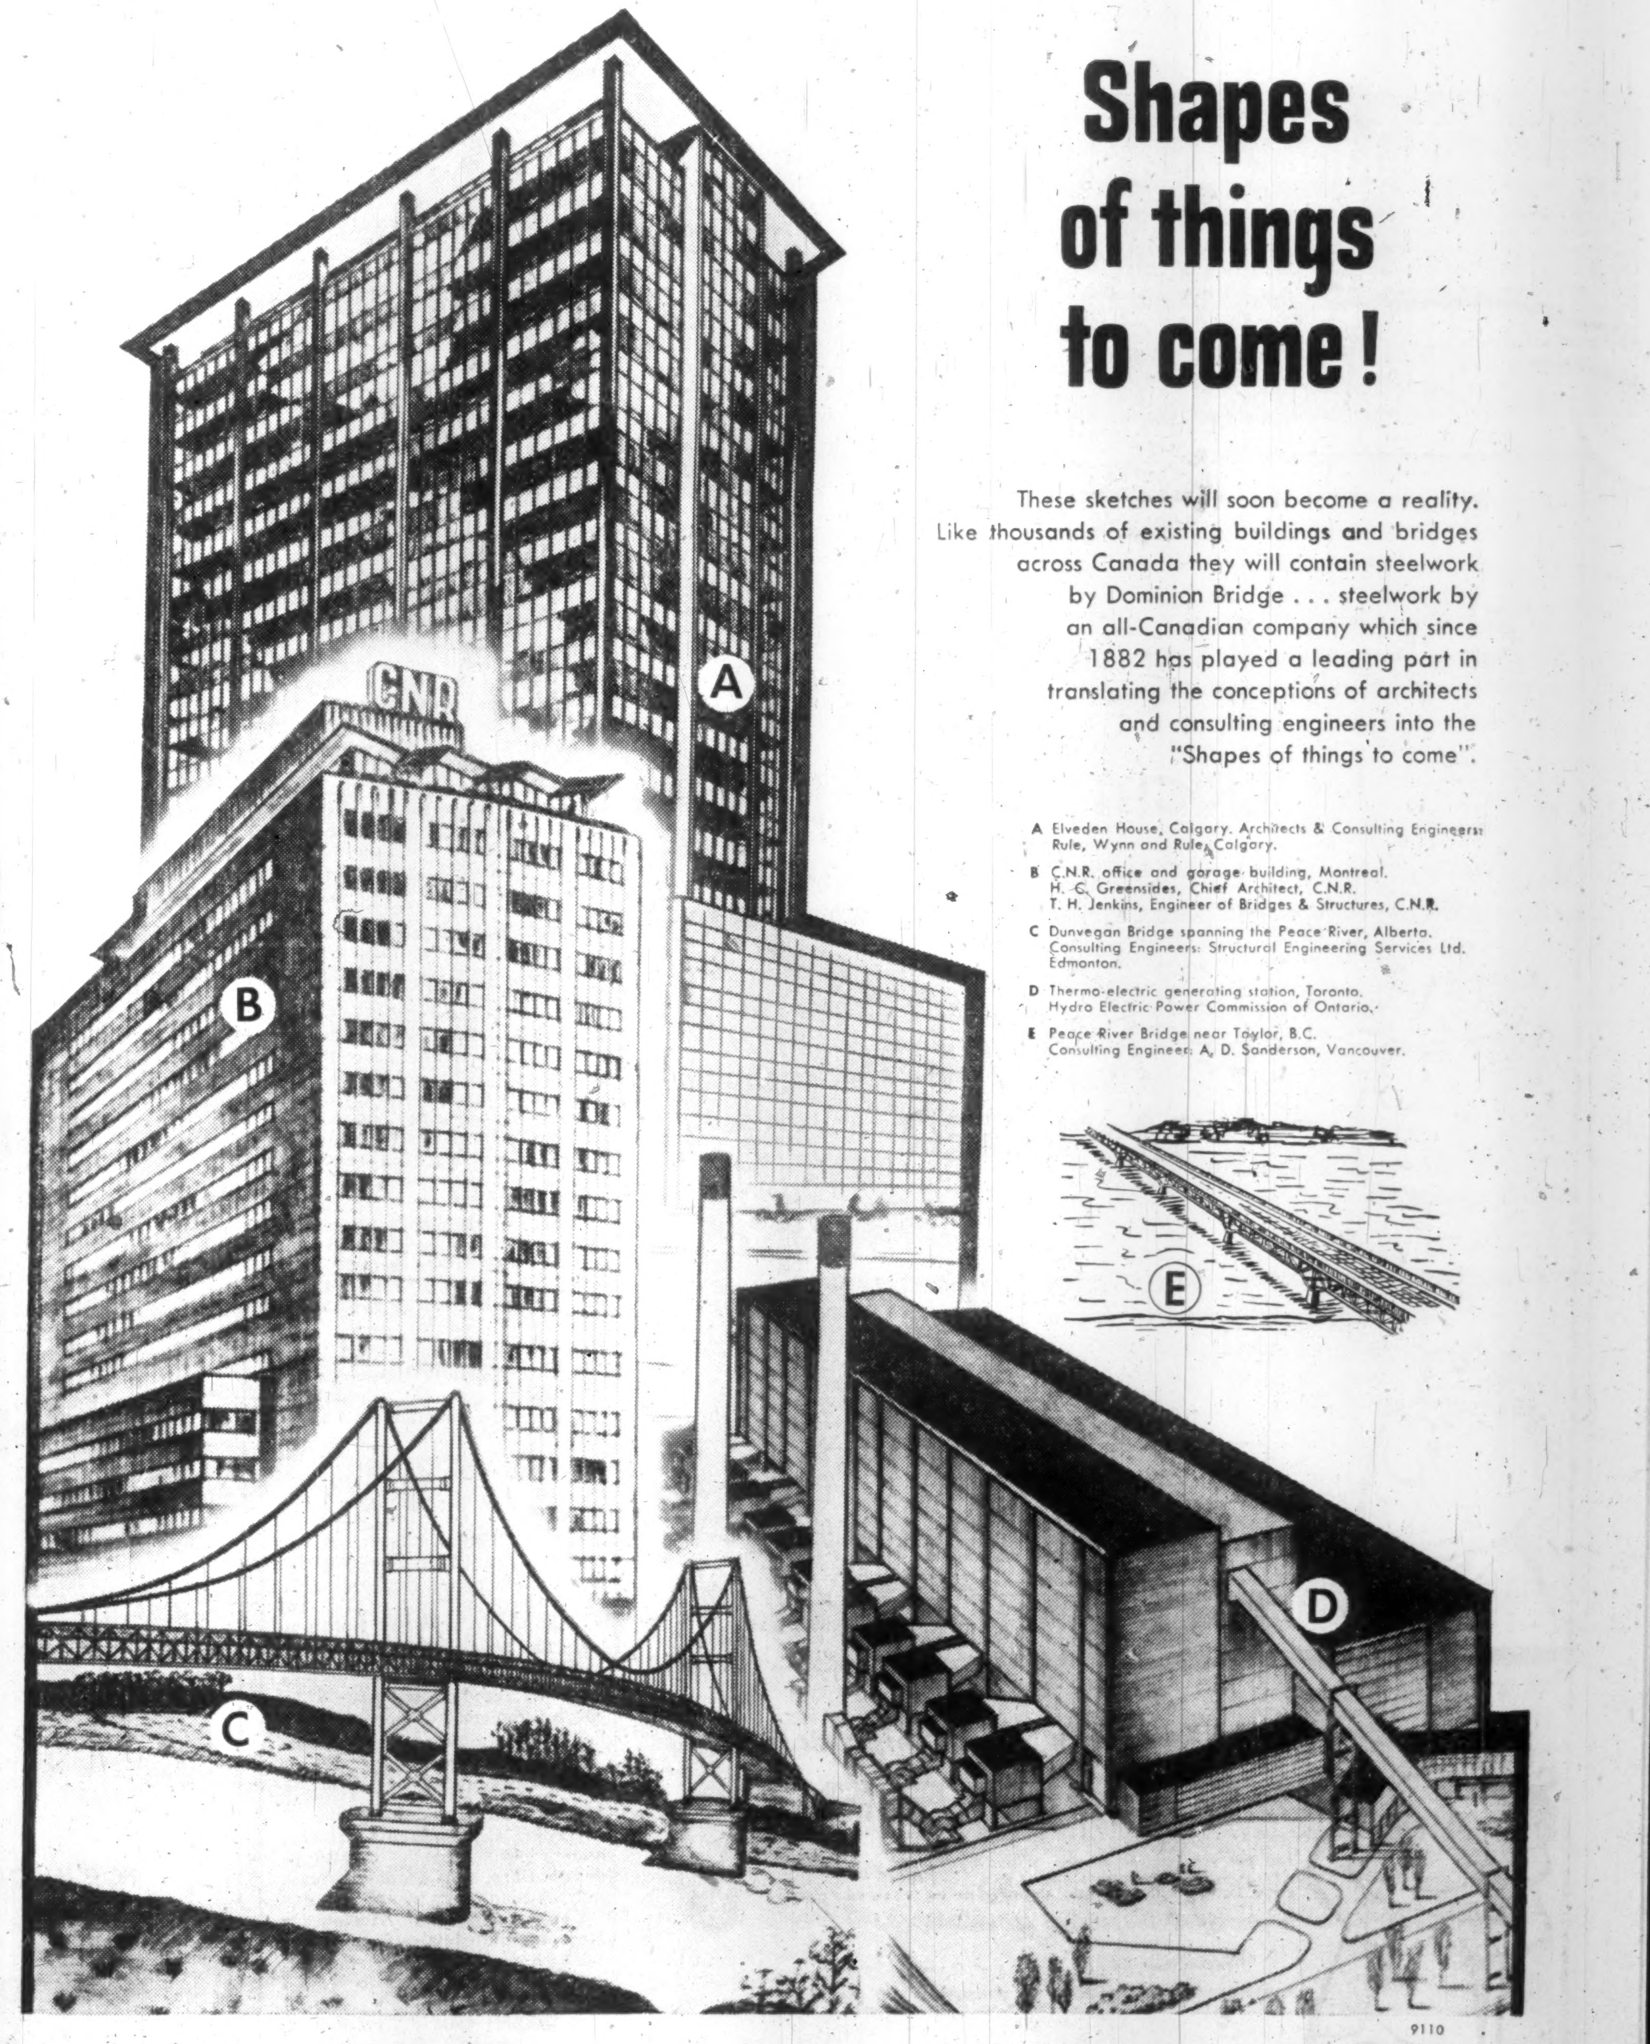
S. S. WINTERS



C. W. BELL

Mr. George McLean, Director of Agencies, Savings & Investment Corporation, announces the appointments of G. B. Moore as Divisional Manager, Toronto; S. S. Winters as Divisional Manager, Saint John, N.B.; and C. W. Bell as Divisional Manager, Province of Nova Scotia.

Mr. Moore previously was Divisional Manager, Saint John, and Mr. Winters, Divisional Manager, Halifax. Mr. Bell, Divisional Manager of Nova Scotia, excepting Halifax, now takes over the combined divisions of Nova Scotia and Halifax.



Shapes of things to come!

These sketches will soon become a reality. Like thousands of existing buildings and bridges across Canada they will contain steelwork by Dominion Bridge . . . steelwork by an all-Canadian company which since 1882 has played a leading part in translating the conceptions of architects and consulting engineers into the "Shapes of things to come".

A Elveden House, Calgary. Architects & Consulting Engineers: Rule, Wynn and Rule, Calgary.
B C.N.R. office and garage building, Montreal. H. C. Greensides, Chief Architect, C.N.R. T. H. Jenkins, Engineer of Bridges & Structures, C.N.R.
C Dunvegan Bridge spanning the Peace River, Alberta. Consulting Engineers: Structural Engineering Services Ltd. Edmonton.
D Thermo-electric generating station, Toronto. Hydro Electric Power Commission of Ontario.
E Peace River Bridge near Taylor, B.C. Consulting Engineer: A. D. Sanderson, Vancouver.

DOMINION BRIDGE

Calgary Science Meet Peps Arctic Interest

From Our Own Correspondent

CALGARY — Knowledge of Arctic geology was spread extensively here this week.

More than 1,000 scientists, including 700 from Canada, 159 from the U. S., five from Russia and from England, Chile and Baltic countries, exchanged information on north polar regions.

The occasion: First symposium on arctic geology, sponsored by Alberta Society of Petroleum Geologists.

Main purpose: To put together all data, which were hitherto isolated, into one continuous whole and thus provide a framework for further exploration and development of untapped resources.

As Dr. Link, Calgary, general chairman, told **FP**:

"The more than 100 papers (45 by Canadians) that have been presented here will not only serve as stimulus to a more active interest in the arctic area **but further understanding on an international level.**"

The symposium heard papers on structural features, arrangement of strata, general configuration of surface distribution and many other studies of the polar regions.

Topics by Canada's representatives included results of the mapping program north of 60th parallel of the Geological Survey of Canada; field methods and logistics in exploration; results into methods of speeding up melting of ice and snow by artificial means; oceanographic observations; and periglacial phenomena.

U. S. representatives presented papers on: correlation of paleozoic rocks in Alaska; surface features of permafrost in arid areas; extension of the mid-oceanic ridge through the arctic basin; seismic studies of the arctic ocean floor and on many other topics.

Russian scientists presented several papers including discussions on main features of structural development of central Soviet arctic and paleozoic and pre-Cambrian deposits in Soviet arctic.

Delegates from Denmark presented papers on geological and glaciological surveying in Greenland.

Other papers included those from England, Finland, Norway and Ireland.

Northern Affairs and Natural Resources Minister Alvin Hamilton outlined the geological and geophysical progress in the Yukon and Northwest Territories (1.5 million sq. mi.; 14% of Canada's area).

One of the main speakers was Cmdr. James F. Colvert of the U.S. Navy, who was in command of the nuclear submarine "Skate" which crossed the geographic arctic pole in March last year.

ANNOUNCEMENT

R. H. CARDINE

William H. Cooley, president of Television Shares Management Corporation, announced the appointment of R. H. Cardine as Field Representative covering Canada, with headquarters at 100 Jameson Avenue, Toronto.

Mr. Cardine will serve securities dealers in Canada on behalf of the more than $300 million Television-Electronics Fund, Inc. for which the Management Corporation acts as investment manager and principal underwriter.

Mr. Cardine has had extensive experience in the promotion and distribution of mutual funds in Canada and comes to Television Shares Management Corporation from Mutual Funds Management Corporation, Vancouver, for which firm he was Dealer Relations Officer. Prior to that he was Manager of the Mutual Funds Department for R. A. Daly & Company, Ltd., Toronto.

Wilkinson Linatex Co. Ltd. (Montreal) — Eric C. Lof, manager Toronto office.

Paint Sales Hit a Record But Mostly Due to Prices

MONTREAL (Staff) — Paint sales in Canada reached a record $140 million last year, up from $134 million in 1958.

But most of the gain was due to price increases — not wider markets. Trade sale price boosts averaged nearly 3%.

In the highly competitive industrial field there were some price increases. Refinishing paints were up 5%.

Trade sales for the year were about $87.4 million against $85 million in 1958 while industrial sales were $52.6 million against $49 million.

Industrial sales lagged a little in the fourth quarter due to the decline in automotive production, a result of the U. S. steel strike. Sales of appliance finishes and lighting fixture coatings were up slightly, however.

Price increases helped relieve the cost squeeze on paint manufacturers prompted by higher freight rates, higher wages and increased costs of materials.

For 1960 the industry hopes to widen its markets by stepped-up promotion campaigns.

New developments to be pushed include wider use of automatic color mixing machines, a radically different quick-drying exterior house paint which overcomes the problem of blistering, a fire-resistant paint, and improved industrial finishes.

Canadian Industries Ltd., which developed Dynakote recently formed a subsidiary, **C-I-L Paints Inc.**, to produce and market this new appliance finish in the U. S.

Sherwin-Williams Co. of Canada has developed Ken-Guard which, when attacked by fire, forms an insulating shield of tiny bubbles to protect combustible surfaces.

Several companies have introduced color mixing machines at point of sale and most are rushing to market the new exterior paint composed of a synthetic resin suspended in a mixture of water, pigment, preservatives and other agents.

Also in the works: paints which repel insects, paints which give cement the appearance of tile and paints to restore vernal green to sunscorched lawns.

WELDING ANALYSIS

An analysis of the welding trade in Canada has been issued by federal Department of Labor. Twelfth in a series of such reports, it lists essential operations which a fully trained journeyman should be able to do and names related knowledge he should have.

INVESTMENT OPPORTUNITY SOFT DRINK FRANCHISE FOR CITY OF TORONTO

1. Pure Spring (Canada) Limited, are manufacturers and bottlers of the "Pure Spring" line of soft drinks with their head office and bottling plant for local distribution, in Ottawa, and with thirty-three plants bottling holding franchise to bottle their products in Eastern Canada and the West Indies.
2. The principal products of the "Pure Spring" line are Pure Spring Dry Ginger Ale, Sparkling Water, Collins Mixer, Honee-Orange Up-Town, Grapefruit'n Lime and India Express Tonic Water — as well as several other fruit flavours.
3. Completely new developments in the soft drink field, now being test marketed, would also be available.
4. "Pure Spring" has made greater progress over the past ten years than any other comparable line of soft drinks in Canada and the United States. In 1959 Pure Spring plants here sold over 80 million bottles of their products.
5. Pure Spring products in cans are now being sold in Toronto by all the leading chain grocery stores. Until now there has been no attempt to exploit the Toronto market.
6. It is now our intention to enter the Toronto market with our full line of bottled and canned soft drinks and to this end we are looking for one individual or Company prepared to take on the franchise to bottle and distribute "Pure Spring".
7. This notice should be of particular interest to any Company with a substantial amount of production space or with a number of trucks, not being used to full capacity.
8. To enter into this franchise will involve a commitment in real estate, trucks, machinery and bottles of at least $250,000 — which figure will of course be reduced by availability of credit, existing buildings and trucks.
9. For further details write:

Franchise Division,
PURE SPRING (CANADA) LIMITED,
22 Aberdeen Street, Ottawa, Ontario.

Box 104, The Financial Post, Toronto

Say Canadians Won't Pay For 'Clean' Car Exhausts

Canadians can have an anti-smog device on their cars, beginning possibly with 1961 models — if enough of them ask for it.

But manufacturers believe that Canadian motorists won't want to pay extra just to keep their exhaust fumes from polluting the air around them.

California probably will make some anti-pollution device compulsory.

By order of the state legislature, the public health office is to set standards for motor vehicle exhaust purity by Feb. 1, to be followed by an order that manufacturers equip all new cars sold in the state with the new device.

Other states — particularly New York — are watching closely.

The major automobile manufacturers are ready. They have reportedly spent $6 million on research; can produce a device that steers gases from the crankcase vent into the carburetor, where they're burned

The device won't be costly. But it will, at best, get rid of only half the pollution.

To make sure that the auto emits "pure" exhaust — carbon monoxide and water — you might pay $300 per vehicle.

Manufacturers say that the average motorist can do almost as well by proper maintenance.

An engine properly tuned, getting the maximum performance, not only gives out less pollution but gives more miles to the gallon.

That's small comfort to Los Angeles, where three million vehicles spume out an estimated 2,500 tons of active chemicals every day.

If Toronto's 475,000 vehicles are as poorly tuned, they pour nearly 400 tons of pollutants into the air daily.

Fortunately, most of it blows away without causing trouble.

Company Report

Textiles

HARDING CARPETS LTD., Brantford, Ont., net profit of $652,291 for year ended Oct. 31, 1959 was 115.7% higher than previous year's $302,438.

Company has decided to discontinue publishing sales figures. President C. M. Harding points out that following the disposal of the yarn division, sales would represent carpets only. This would have made the company the only Canadian company publishing these figures.

Company has purchased interest totaling $306,655 in **Newlands-Harding Yarns Ltd.** and **York Mending Wool Co.** Notes receivable from Newlands-Harding have been reduced since the end of the fiscal year to $100,000. The balance is to be redeemed shortly.

Capital expenditures totaled $541,157 and included building and equipping the tufting mill adjoining the Brantford plant and additions to the carpet yarn mill. Approximately the same amount is forecast for this year. The expenditure will include additions to the carpet yarn spinning mill in Guelph and to the office building and showrooms in Brantford.

First shipments of tufted carpet from the new plant were made in December. President Harding reports that, while no benefit was received from operations in the 1958-59 fiscal year, they should contribute materially to sales and profits in the 1959-60 year.

Increased use of synthetic fibres is expected in future and this will reduce company's dependence on the fluctuating wool market.

Annual meeting is Jan. 20.

ENGINEERING FIELD EDITOR

The man we hire will be appointed to the editorial staff of Heavy Construction News, a rapidly expanding weekly now reaching over 11,000 contractors and engineers.

This is a senior position and requires a professional engineer with several years writing experience. Our man will, among other things, travel across Canada, writing case-history on-site feature articles of outstanding projects in the construction-engineering field.

We offer a top salary, commensurate with ability and experience; hospitalization, life insurance and pension plans; national prestige and a congenial working atmosphere.

Apply in writing, giving pertinent background details to:

Personnel Manager,
MACLEAN-HUNTER PUBLISHING CO. LTD.,
481 University Ave., Toronto, Ontario

Credit Administration

Procter & Gamble has an attractive opening for a university graduate, 30 or under, with credit experience and desirably a C.C.M.T.A. graduate. The work involves supervision of all aspects of credit, collections and accounts receivable for all of our Canadian business. As quickly as he shows his competence, the person selected will assume complete reponsibility for this phase of the company's operation.

This position will appeal to the young man who is presently employed in credit work, but who finds his immediate prospects for advancement slowed by a young superior. Applications, describing full details of education and experience, should be sent to: Personnel Supervisor, P.O. Box 355, Terminal "A", Toronto.

PROCTER & GAMBLE

REPRESENTATIVE

We are looking for a man with highest qualifications as REPRESENTATIVE

for the Provinces of Manitoba, Saskatchewan and Alberta. Office and Warehouse located in Winnipeg. Must be able to take care of our large dealer organization and promote sales for our complete line of steel office furniture, steel—and aluminum partitions and shelving.

High income guaranteed through salary and commission. Only those will apply who meet these requirements and who have past experience in our lines and good contacts in these territories.

Information relating to remuneration and conditions of service will be furnished by mail to candidates who meet the above requirements.

Hardware Men Forging New Retail 'Chain'

By ROY K. COOKE

SAINT JOHN — More competition is shaping up in retail hardware.

Battle area is from Ontario to Newfoundland.

A wholesale distribution group plans to operate a number of associated stores that might be similar to **Red & White** or **IGA** in the grocery field.

Firms concerned: **Lewis Brothers Ltd.**, and **F. Wragge Ltd.**, of Montreal; **Lewis Brothers Hardware Ltd.**, Toronto; **Chinic Hardware**, Quebec City and Rimouski and **Thorne's Hardware Ltd.**, Saint John.

All are owned by **K. C. Irving** interests.

Two years ago the group began issuing spring and fall catalogues with dealer imprints on the cover, available in either French or English.

It was the first attempt of its type in Canada and one of the biggest on the continent.

The fall copy was in four colors, 132 pages with one million circulation, listing retail prices.

Dealers from Windsor, Ont., to Newfoundland provided local distribution.

Signature crest on front cover is CTL, for Chinic, Thorne's and Lewis, the tie-in for merchandise distributed by each company to its own dealers.

In Saint John, Thorne's officials were reticent to discuss plans but a full-page advertisement in the Saint John dailies invited hardware stores in the Atlantic Provinces to join the CTL group, presumably as franchise stores.

President of Thorne's Hardware Ltd., is Oren Roberts who is also vice-president of Lewis Brothers Ltd., and a director of Chinic Hardware.

Key officials of Thorne's: Carl G. Bird, general manager; Don Fulmer, assistant manager; C. E. Levesque, sales manager; Norman Jackson, general purchasing agent.

Already in use are two private brands, Black Diamond and RVB which range from tools to a complete line of automobile accessories. Black Diamond is first quality.

Sparking these changes in the East is one of the continent's most modern hardware warehouses at Saint John.

Thorne's Hardware Ltd. began preparation for this $1 million-plus building in 1957 with executives traveling thousands of miles to get ideas from other distributors.

For the official opening, open house was held from Oct. 15 to 17.

Contractors and dealers were invited from all Atlantic provinces and Gaspé with Thorne's paying hotel expenses.

Over 325 dealers and their wives took advantage of the offer.

There were more than 700 guests at the final dinner dance at the **Admiral Beatty** with Thorne's paying the tab.

Goodwill for the company was tremendous.

So successful was a trade fair held in connection with the promotion that it will be an annual affair.

Reason for the enthusiasm was that many Maritime small-town store owners never visited trade shows in Montreal or Toronto.

Some were seeing complete lines for the first time with 66 manufacturers exhibiting.

Result: plenty of orders.

One salesman for a clock manufacturer worked late two nights writing orders.

Meanwhile Thorne's 12 salesmen who cover from Gaspé to Newfoundland are riding the crest.

The two-story warehouse with an all-glass front has over 12,000 sq. ft. for display alone.

Storage space at the rear is 210 ft. by 286 ft.

A railway siding running through the centre has space for five box cars to be unloaded under cover.

The company was founded in 1867 by W. H. Thorne.

It was acquired by K. C. Irving in 1943.

Although sales and territory covered have increased considerably in 16 years, Thorne's biggest push is still ahead.

New lines are plumbing, heating, heavy appliances, electrical contracting supplies and industrial supplies, all requiring specialty salesmen to call on the trade.

Last March Thorne's opened the first unit of a company-owned chain at the Oromocto Shopping Centre near Fredericton.

Called **Great Eastern Stores Ltd.**, they will be super hardware stores with nine branches scheduled for various Maritime centres, including Halifax, Moncton, New Glasgow, Saint John and Sydney.

The first unit has 8,000 sq. ft. and stocks everything from paints to records.

The company, like the CTL operation, declines to give much information on this project.

Officials say CTL will enable independents to meet prices of any chain or department store competition.

Stelco Production Makes New Record

Steel Co. of Canada established an all-time Canadian record for basic steel production during 1959, Chairman H. G. Hilton said this week.

The company made 2,438,000 tons of steel ingots at Hamilton Works, about 3% higher than the previous record set in 1956.

Including steel ingots purchased for further processing and and received from customers for conversions, the company rolled the equivalent of 2,695,000 ingot tons, over 12% more than rolled in any previous year.

Although Stelco's sales are also expected to reach new heights when 1959 figures are tabulated there were some weak spots in the sales picture.

These resulted from the flow of imports from low-wage countries in Europe and Asia.

Reinforcing bars and finishing mill products—wire, fence, nails, bolts — were hardest hit.

Hilton predicted a good year for Stelco in 1960 when the company celebrates its 50th anniversary.

"Our order position is good into the second quarter of the year," Hilton said.

L. E. BAINARD

Appointment of L. E. "Hap" Bainard as manager of Sudbury branch, Hill-Clark-Francis Ltd. has been announced by G. E. Hicks, retail division manager.

Napier Moore's

Scratch Pad

DURING the festive season, with a group of young people, there came to our home a most likeable 18-year-old youth from Texas.

By no word or action on his part would anyone have known that he is the grandson of one of the wealthiest men in that state.

The first inkling I had of this situation was when a friend who had introduced him phoned me and said:

"You certainly made a hit with young So-and-so. Speaking of you he said, 'There's a man after my own heart. I'd like to take him back to Texas with me.'"

At my age that is a compliment that will see me through 1960.

* * *

On the subject of youth, the Harbor Island correspondent of the Nassau Daily Tribune reports the case of 20-year-old David Dwight Curry, who is captain of a launch that conveys passengers to and from the Eleuthera airstrip, captain of a freight barge, and captain of a motor truck.

This versatile young man has let it be known that he would be interested in hearing from any attractive young lady who is interested in matrimony, as he is.

With candor he makes the qualifications that unless the young lady has a wealthy father or mother, or both, there is no use writing him.

* * *

Several years ago, visiting Governor's Harbor, on the island of Eleuthera, I attended the quaint old Anglican church of St. Patrick which graces the approach to a spit of land called Cupid's Cay.

The service was not only very High Church, but it had a form which was obviously ancient.

I remarked on this to the priest, then Father Tatton Arundel.

He said it was actually the service prescribed by Thomas Cromwell, mentor to Cardinal Wolsey and lay vice-regent to Henry VIII.

He knew of only one other church in the world which followed the same service, and that was the private chapel of the late Lord Halifax in Yorkshire.

* * *

As I mentioned at the time of his death, Lord Halifax was a deeply religious man.

I read that before he died he made a detailed order of service of the Requiem to be sung for him in York Minster.

Used at that service was a chalice he presented to the Dean and Chapter.

Set in it is the episcopal gold ring of the famous French Cardinal Mercier.

This he inherited from his father, who, 40 years ago, had long talks with the Cardinal on the subject of reunion of the Christian churches.

They became devoted friends, and Mercier bequeathed his ring to him.

* * *

London political correspondents anticipate that Rab Butler, new chairman of the Conservative Party will early this year report to the Prime Minister recommendations that Young Conservatives should be given closer attention and greater opportunities in the functioning of the party machinery.

So far as the House of Commons is concerned, as yet not much has been heard from the young men who won seats for the Conservatives in the last general election.

But the pattern that is forecast will undoubtedly encompass them. And their number is a goodly one. Thirty-two are under 35 years of age. Youngest of all is Paul Channon, of Southend West, who is but 24.

* * *

I like the story columnist Peterborough tells in the Daily Telegraph about a dinner party given many years ago by a famous English hostess, Mrs. Ronnie Greville.

There were some 30 guests, including the then Foreign Secretary, Sir Austen Chamberlain, and his wife.

It became obvious that Mrs. Greville's butler was not quite himself.

To avoid a scene, she handed him a note.

It said, "Leave the room at once. You are drunk."

As Peterborough says, the analysis was evidently accurate, because the butler promptly handed the note, on a salver, to Lady Chamberlain.

McBee Offers New Computer

A fully transistorized general purpose digital electronic computer system for science and business will be marketed throughout Canada by **The McBee Co.**, Toronto.

The computer—the RCP-4000—will rent for $1,925 a month or sell for $96,000. No site preparation or installation costs are necessary.

First deliveries of the new system are scheduled for next summer, says J. W. Bryers, vice-president sales.

The RPC-4000 was developed by a subsidiary of the **Royal McBee Corp.** in the U. S., parent company of the Canadian firm.

TO NAME LIQUIDATOR

Shareholders of **Northern Canadian Mortgage Co.** were to meet in Winnipeg Jan. 15 to appoint a liquidator to succeed the late George W. Northwood, who died Dec. 15. Mr. Northwood served as president of Northern Canadian **more than 27 years.**

Quebec Lithium Starting Up Plant In Two Months

MONTREAL (Staff) — **Quebec Lithium Corp.** has settled out of court its suit against **Lithium Corp. of America.** The U. S. firm canceled a contract to buy lithium (**FP**, Sept. 19).

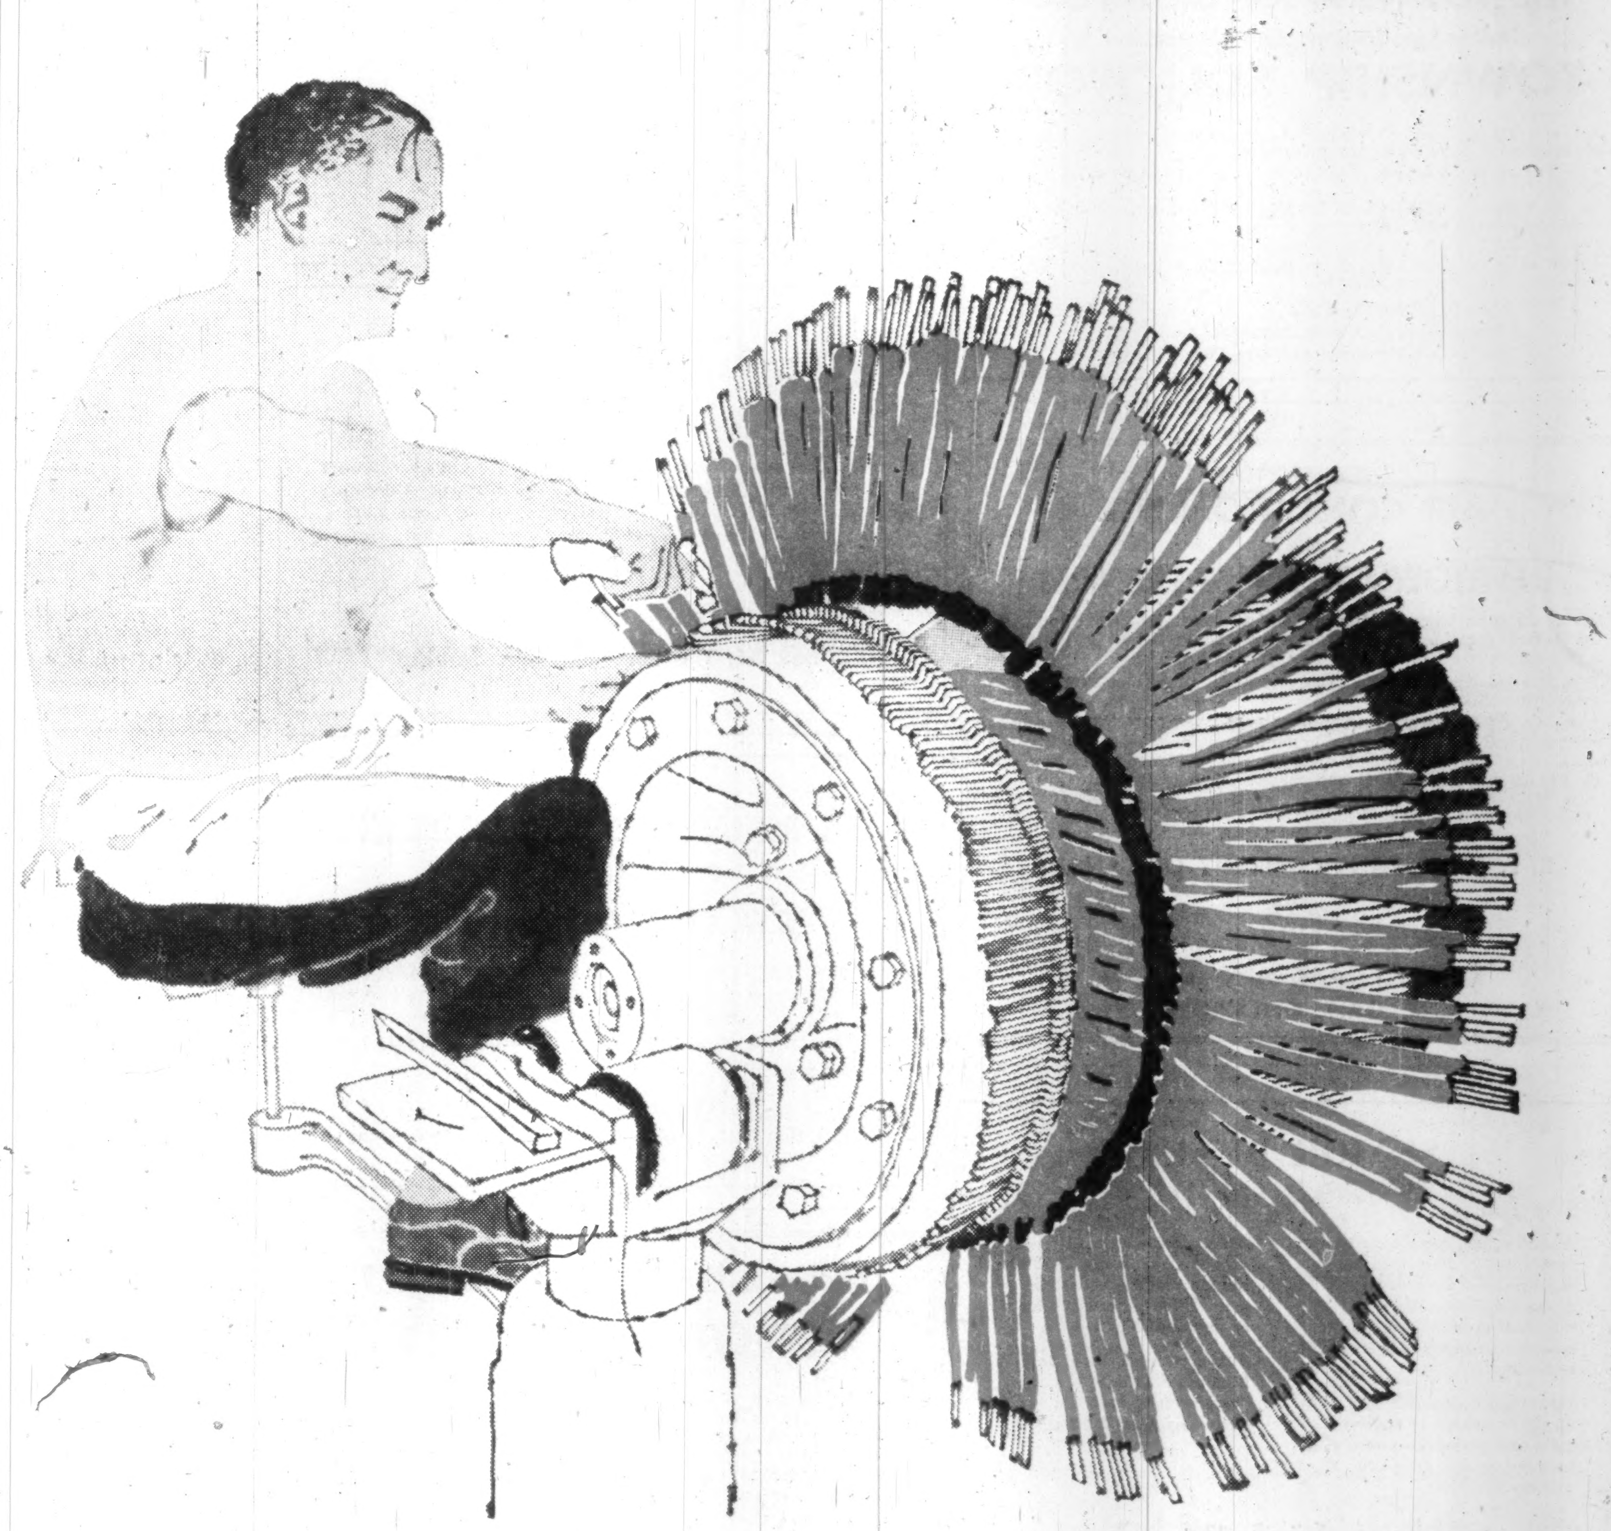
Pierre Beauchemin, president of Quebec Lithium, said that total amount to be received from Lithium Corp. was $2,315,000 plus "some interest".

He told **FP** payments totaling $515,000 had already been received. A first mortgage has been obtained on the U. S. firm's Bessemer City, North Carolina, plant as security for the amount outstanding.

Work on Quebec Lithium's treating plant is proceeding. It is expected to be completed and in full operation by March, Beauchemin said. Initial production will be lithium carbonate to be followed by lithium hydroxide.

Beauchemin said that in the past few months there had been increasing interest by U. K. and continental lithium users.

HOW OTIS BUILDS OUTSTANDING VALUE INTO OTIS ELEVATORS



HAND WINDING ELEVATOR MOTOR ARMATURES AT HAMILTON, ONTARIO

Why are passengers seldom aware of motion when riding OTIS elevators — *the world's finest?*

One reason is OTIS hand built elevator motors. They're not adaptations of standard commercial motors. OTIS motors are specifically designed to meet the unique requirements of elevator service. They deliver the instant and sustained surge of power needed for high speed travel . . . for the smooth acceleration . . . and deceleration that are so recognizably OTIS. Every motor part is built in the OTIS plant under rigid quality control —from cast steel frames to hand wound armatures. All, with a basic knowledge of elevatoring that is unmatched anywhere.

How much of the complete elevator installation does OTIS manufacture? Everything! Over 28,000 original and always available replacement parts. From the smallest switches in the machine room to the beautifully designed and finished cars and entrances — *to make certain that every OTIS installation performs as a completely integrated unit.*

Vol. LIV Member of Audit Bureau of Circulations Publication Office: Toronto, January 16, 1960 Twenty-five Cents an issue, Eight Dollars a Year No. 3

How they built and managed a successful investment program...

For 15 years the managers of FP's Compton and MacNab investment portfolios have piloted their clients' money through the ups and downs of the Canadian economy—and made a tidy profit . . .

By H. R. SUYDAM

Sound management is the key to a successful investment program, particularly in the face of Canada's fluctuating and often selective securities' market.

But not every private investor has the knowledge, foresight or time to give his investments the close and careful attention they require.

Because of this, thousands of Canadians have placed their portfolios in the hands of professional investment managers, either directly or through such means as mutual funds and common trust funds.

To illustrate the techniques involved in the professional operation of a private investment portfolio, back in 1944 FP asked two experienced and independent investment men to each undertake the management of a hypothetical investment account, both valued at $10,000.

Now, 15 years later, the accounts have market values over three and a half times their original size.

Since an investment program should be tailored to fit the particular needs and circumstances of the person for whom it is designed, the paper beneficiaries—Compton and MacNab—were assigned definite and individual personalities.

Compton was 38, married, had two children but no dependent relatives. His investment aims were divided almost equally between capital gain and income.

MacNab was 57, married, with his wife as his only dependent. His objective was maximum income consistent with safety.

Over the years, the managers have made many changes.

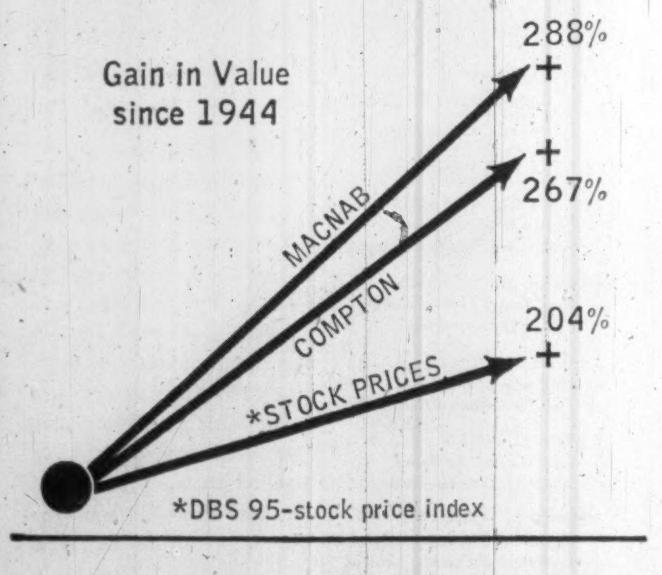
Both have altered their policies to meet shifting economic conditions while keeping in mind the individual needs of their clients.

The tables on p. 34 show how the two accounts have progressed in the past year, and the substantial changes that have taken place since they were first set up in 1944.

The charts on this page set out changes in the percentage distribution of the portfolios in terms of types of securities held.

Compton's manager, consistent with his client's twin goals of capital appreciation and income, has concentrated to a greater extent on the more volatile common stocks.

Portfolios' Performance



*DBS 95-stock price index

At the end of 1956, mining stocks alone accounted for more than half of the Compton portfolio.

On the other hand, MacNab's manager, his eye more firmly fixed on income, has included and maintained a higher percentage of fixed income securities.

In recent years, however, both managers have placed the major portion of their client's holdings in industrial common stocks, reflecting higher dividends and the generally more buoyant market behavior of this type of security.

In the listless, sporadic trading which characterized Canadian stock market activity during most of 1959, neither account made much headway.

Value of the Compton account reached $36,692 at Dec. 15, for a gain of $1,072 or 3% over value a year previous.

MacNab's portfolio edged up 2.6% or $977 to a total value of $38,803.

During the same period, the market as a whole, as measured by the DBS common stock index, advanced a mere 2%.

In the matter of income, Compton's indicated return is $100 below the December 1958 level of $1,462, but MacNab's is virtually unchanged in the year's comparison at $1,667.

Income actually received during 1959 by Compton came to $1,378, a drop of $175 from the previous year.

Dividends and bond interest accruing to MacNab's account in 1959 totaled $1,530, about $8 under the 1958 receipts.

As the following table shows, both Compton and MacNab have aggregated over $15,000 in income during the past 15 years.

	Compton		McNab	
	Annual Income	Payout	Annual Income	Payout
1945	480	300	508	300
1946	380	300	610	300
1947	596	300	408	300
1948	759	300	622	300
1949	855	665	733	500
1950	941	665	708	500
1951	1,037	665	883	500
1952	1,103	800	1,056	500
1953	1,087	800	1,298	500
1954	1,211	800	983	500
1955	1,255	800	1,316	500
1956	1,792	1,160	1,609	500
1957	1,301	1,160	1,488	500
1958	1,553	1,160	1,538	1,100
1959	1,378	1,160	1,530	1,100
Total	15,728	11,035	15,290	7,900

The sudden jump in the 1958 payout from the MacNab account results from decisions made in February of that year to increase both the amount MacNab withdrew for his own use and the management fee.

Where formerly MacNab had withdrawn $40 monthly for himself and $5 quarterly for safekeeping charges and management fees, he now withdraws $250 per quarter for his own use and $25 for the manager.

This change brought the MacNab payout more in line with that of the Compton account where $250 is withdrawn quarterly for personal use and $40 for management fees.

MacNab's previous low rate of payout enabled him to plow back more money for investment and accounts in part for the higher market value his portfolio has enjoyed for some time over that of Compton.

Compton's larger payout compensates by more than $1,000 for the present difference in total value of the portfolios.

Compton's manager added eight new companies to his client's account in 1959 through purchases of **B. C. Power, Kerr-Addison Gold Mines, Macassa Mines, Alberta Gas Trunk Line A, Canadian Breweries, R. L. Crain Ltd., Bell Telephone** and **Price Bros. & Co.**

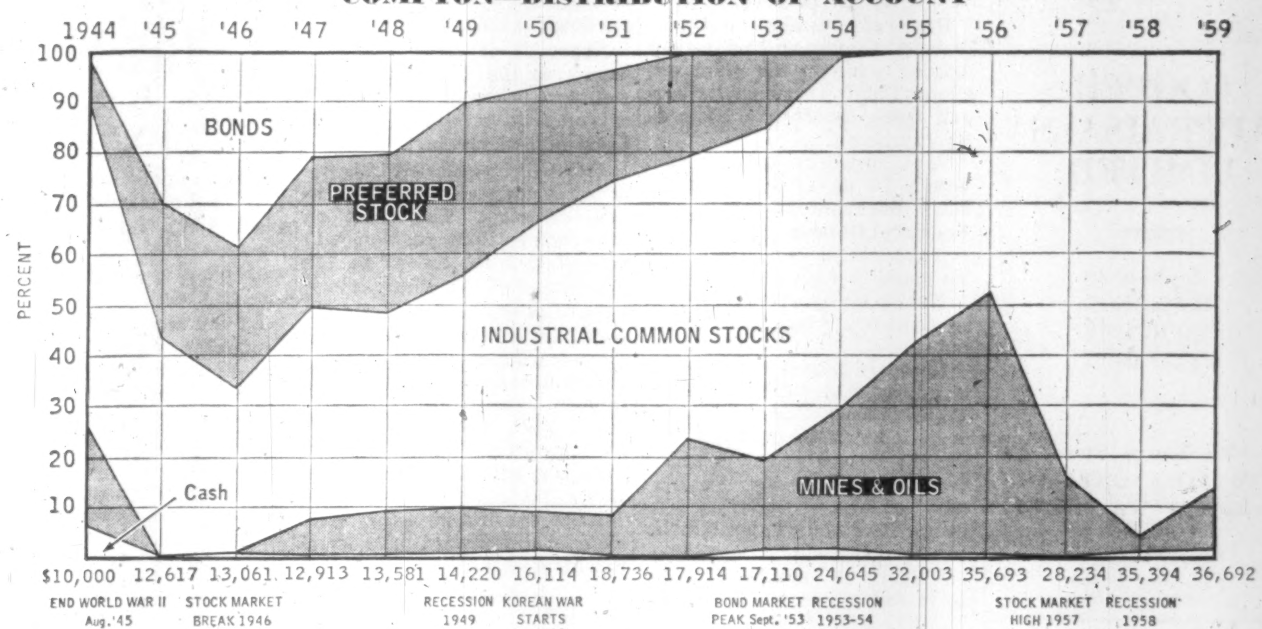
Canada Cement, Dominion Stores, Cosmos Imperial Mills, Canadian Dredge & Dock and **Asbestos Corp.** were dropped, leaving 18 stocks in the account at the end of the year.

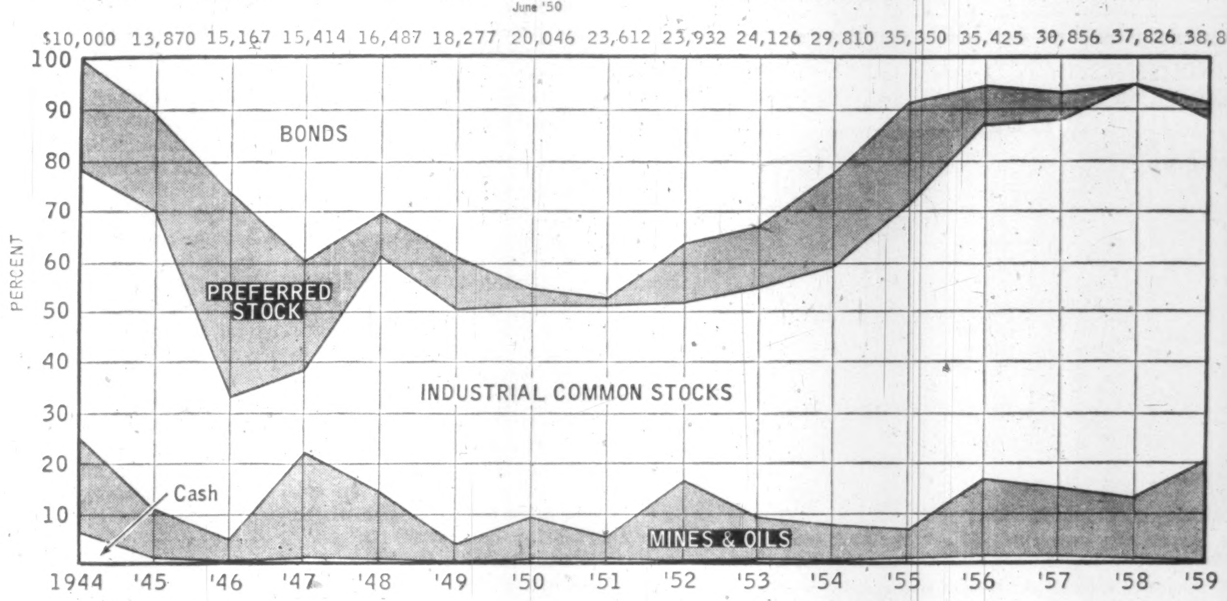
MacNab, with 18 companies represented in his portfolio (two less than at the end of 1958) added two new securities and a bond during the year: **Algoma Central & Hudson Bay Railway, Algoma Steel** and **B. C. Electric,** 5½% due 1989.

Eliminated from the portfolio were **B. C. Power, A. V. Roe Canada, Du Pont of Canada, Trans-Canada Pipe Lines** and **Canadian Pacific Railway.**

How Accounts Changed with the Times

COMPTON—DISTRIBUTION OF ACCOUNT





MACNAB—DISTRIBUTION OF ACCOUNT

Compton's Manager Says . . .

At Dec. 15, 1959, Compton's portfolio was valued at $36,692. The prospective annual income was $1,362, representing a yield of 3.7%.

A comparison of the market value and income at the close of this year with the corresponding dates of recent years is as follows:

	Current Market Value $	Prospective Annual Income $	TSE Industrial Index
Dec. 15, 1956	35,693	1,543	461
Dec. 14, 1957	28,234	1,535	404
Dec. 15, 1958	35,620	1,462	510
Dec. 14, 1959	36,692	1,362	530

It will be seen that while the capital value of Compton's account rose to a new high, it was necessary for Compton to accept a lower annual income in order to achieve that objective. In other words, the cross currents of the Canadian market permitted fewer groups to advance during the year, and in order to concentrate the funds within the successful groups, it was necessary to accept lower yields.

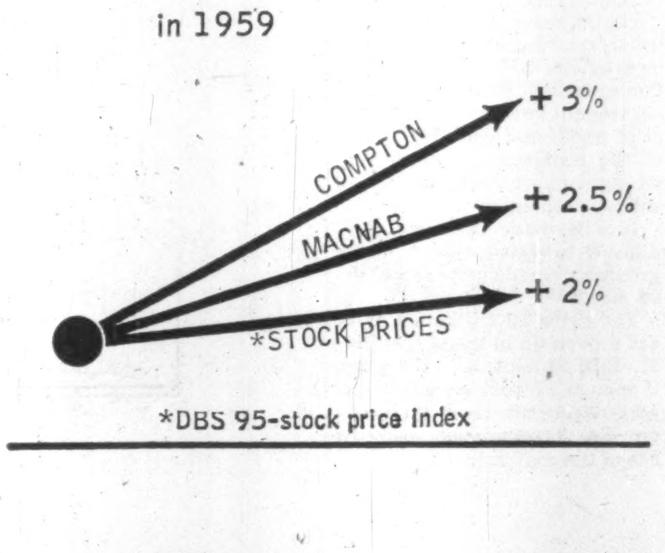
Although the account reached a new high, its performance during the year fell between two of the representative averages. The Dominion Bureau of Statistics Index advanced approximately 2%, the Toronto Stock Exchange Index of industrials 4.0% and Compton's 3.3%. Dividend income re-invested by Compton in the period, after deducting his withdrawals of $1,000 and his investment manager's fee of $160, amounted to $218. The balance of the capital growth, that is $854, was due to an improvement in the quotations for the securities held.

Both the capital growth and the income were adversely affected by the elimination of the dividend on **Toronto Iron Works** Class 'A' shares, which led to a decline in price from $32 to $17¼ in the period. As noted in an earlier letter, the manager felt it desirable to retain this highly cyclical stock in the hope of improvement during a prosperous 1960.

During the year, five stocks were eliminated from the account and three were reduced. Eight new commitments were made and three existing holdings increased. There was also one stock which was purchased earlier in the year and later sold.

Giving effect to these changes, Compton is now represented in 18 companies, rather more diversification than is necessary in an account of this size. The account will probably be consolidated into fewer individual situations in the year ahead.

Portfolios' Performance



*DBS 95-stock price index

MacNab's Manager Says . . .

The year 1959 was a difficult one for investors and investment managers.

A comparison of the market value and income at the close of this year with the corresponding dates of recent years is as follows:

	Current Market Value $	Prospective Annual Income $	TSE Industrial Index
Dec. 15, 1956	35,425	1,530	461
Dec. 14, 1957	30,856	1,626	404
Dec. 15, 1958	37,826	1,633	510
Dec. 15, 1959	38,803	1,667	530

During the year under review I have endeavored to upgrade the securities held in MacNab's account and also carried on some switching operations from non-growth companies into companies which I consider have greater growth potential and prospects for increased dividends.

The outlook for 1960 appears to me to be good for investors interested in income rather than capital gain, although I anticipate that dividends paid by our leading corporations will be maintained at about the same rate as 1959.

Mr. Coyne, Governor of the Bank of Canada, in a recent speech expressed the view that we might experience a 7% increase in the Gross National Product in 1960. If this forecast is realized it will put a strain on both the country's real resources and interest rates, particularly on provincial and municipal obligations and corporations.

Economic growth this year will be heavily dependent on exports and capital investment, and should lead to a further 15% increase in corporate profits, particularly in the resource industries such as iron ore, oil, natural gas, and aluminum.

It has also been suggested in some quarters that the next federal budget might include such measures as a temporary reduction of allowable depreciation to cut business spending, and/or tax changes designed to stimulate saving by individuals which would also discourage excessive consumer spending.

The policy of MacNab's account for 1960 will be guided by such considerations, although it is impossible to forecast at this time what will be done until the budget is brought down.

Recent Changes in MacNab

On Dec. 21, MacNab's manager switched his client's 25 shares of **Molson's Brewery** 5½% stock for 25 new $2 convertible preferred shares of **International Utilities Corp. (FP, Dec. 26).**

Here are the details:

Shares	Purchase	Date	Price per share $	Net amount $	Indicated income $
25	International Utilities Corp., $2 convertible preferred	Dec. 21	39⅞	1,005.62	50.00
	Sale				
25	Molson's Brewery 5½%, $40 par preferred	Dec. 21	40	989.50	55.00

As a result of this transaction, MacNab's cash balance is reduced by $16.12 to a debit total of $94.96, and his income in prospect is $5 lower at $1,662.

No changes have been made in the Compton account since the 1959 year closed on Dec. 15.

Gas Prices: Fighting Issue Still to Come

By W. L. DACK

Prices of natural gas to Canadian distributors will be the key fighting issue in the giant gas export hearing now in its second week before the National Energy Board.

Real fireworks are expected within 10 days to two weeks when intervenors—particularly **Northern Ontario Natural Gas** and the city of Calgary — take the stand to state their cases.

The issues involved are vital to Canada's whole future gas policy.

Northern Ontario Natural Gas is asking that NEB throw out **Trans-Canada Pipe Lines'** export application, claiming that the higher gas prices resulting from "unreasonable exports" will seriously jeopardize its competitive fuel position in northern Ontario.

Calgary is seeking further price and gas supply protection.

Authorities close to the gas picture see the whole issue boiling down to this:

Approval of large-scale gas export to the U.S. will boost wellhead prices of gas, because of competitive bidding to get a guaranteed supply.

This will be reflected in higher prices charged utility firms in new contracts. The effect on gas's competitive position will depend to some extent on the price trend of the other fuels.

But Canada can't have it both ways, these officials point out. The advantages on the other side of the ledger are in the huge capital expenditure programs touched off in Western Canada and the sharp improvement in Canada's cash exports to the U.S.

After the first impact of U.S. exports, the upward price trend in gas here will tend to flatten out.

Actually the greater operating efficiencies that come with higher pipeline volume should go a long way in counteracting the higher wellhead costs.

On the thorny topic of relative prices to Canadian and U.S. distributors, two key factors must be considered:

- **The U.S. buyers will take a much higher immediate "take" under their take-or-pay contracts** (Mid-western will take approximately 80% of contracted supply in first year). This is a big price determinant with all gas transmission companies.
- **The contracts with the U.S. distributors have escalator clauses with prices moving up every five years.** To compare these with Canadian prices one would have to arrive at an average price for the entire length of the U.S. contract.

Contracts with Canadian distributors, on the other hand, are firm with the same gas price throughout the 20-year contract. Northern Ontario officials claim they have been trying unsuccessfully to complete a new contract for additional gas with Trans-Canada; that prices being talked by the transmission firm are so high as to endanger their future competitive position with other fuels.

Trans-Canada says it hasn't been able to set any firm prices because NONG is indefinite on proposed purchases, particularly in respect to point of deliveries, exact timing and load growth.

Under the plan being talked by NONG it would only take minor quantities before 1962-1963, with a gradual build-up in "take" over a 20-year period.

While it opposes Trans-Canada, NONG is supporting the other four export applications on the ground that they would help foster exploration and gas development in Western Canada.

Alberta gas utilities have already been able to wrest a measure of price and supply protection from gas exporters. These concessions were gained two years ago when the export plans were facing rough opposition in the province from local utilities.

Under this plan the Alberta utilities are guaranteed a weighted average price for additional gas any time they wish to purchase more.

In other words they are given first call on available supplies at these prices.

NONG asks that the Energy Board takes steps to assure the rest of Canada gets the same price and supply guarantee.

Under the gas purchase contracts, Alberta producers after 1968 can ask to have the contracts reviewed if the transmission company earnings exceed a 7.5% rate of return.

NEB will also watch the transmission company earnings rate closely. In the event earnings look unreasonably high (no definite rate has been set) it can force downward the transmission charges proposed by the pipeline company for the following year. The rates must be filed with NEB each year.

The recent estimate on established gas reserves in the province by the Alberta Oil & Gas Conservation Board and the subsequent government approval of additional gas exports out of the province is seen adding strong support to the whole gas export proposal.

It will make it increasingly difficult to refuse export on the grounds of inadequate established reserves.

The extra 2.1 trillion cu. ft. of gas proven up in the period Dec. 31, 1958 to Sept. 30, 1959 alone is enough to meet the entire export requirements of **Midwestern Gas Transmission** over the life of the contract.

ANNOUNCEMENT

THOR INDUSTRIES LIMITED AND COIN WASH LIMITED
ANNOUNCE COMMERCIAL SALES PROGRAM

M. E. TAYLOR, VICE PRESIDENT
Thor Industries Limited

HARVEY S. WOLFE, PRESIDENT
Coin Wash Limited

Mr. M. E. Taylor, Vice President and General Manager of Thor's Burroughes Division and Mr. Harvey S. Wolfe, President Coin Wash Limited, have announced the appointment of Coin Wash Limited as exclusive national distributors of Thor's new line of automatic washers specifically designed for Coin store operation.

Coin Wash Limited, with head offices in Toronto, pioneered the introduction of unattended coin operated laundry stores in Canada and now have 41 in operation or under construction throughout the country. Branch offices of Coin Wash Limited have now been opened in Montreal, Ottawa, Winnipeg, Calgary, Edmonton and Vancouver, and other laundry stores will soon be available in these and other centres.

The Burroughes Division of Thor Industries Limited introduced Canada's first coin operated laundry units in apartment houses more than 20 years ago. This experience will support Coin Wash Limited in its national program to provide complete facilities to the potential store operator. It is expected that Coin Wash will be able to fully develop the high market potential of this comparatively new laundry application.

$4.5 Million Housing Plan

From Our Own Correspondent

EDMONTON—A $4.5 million housing development in the Leduc area, 20 mi. south of Edmonton, is planned by an Edmonton syndicate. Some 325 homes are planned.

Main purpose of the project: To house personnel for the $15 million international airport being built at Nisku, 16 mi. south of Edmonton, by the federal government.

This airport is to be opened this summer.

It has 11,000-ft. and 10,000-ft. runways.

The housing project will be about three miles from the airport's terminal building.

A maximum of 50 houses will be built this year, while the over-all rate of building will be tied to construction progress at the airport. Home prices will range from $12,000 to $18,000.

Planned by D. L. Makale, Edmonton town planning consultant, the subdivision, which comprises about 100 acres, will have no lanes.

There will be only one road passing completely through the site. Each house will have a driveway from the street.

Associated Engineering Services Ltd., of Edmonton, is acting as engineer for the project.

Members of the syndicate are **Alloway Agencies,** W. L. Anderson, president of **Anderson Lumber Co.,** O. H. Hegland, president of **Airway Tires Service Ltd.,** F. William Forster, president of **Bennett & White Alberta Ltd.,** general contractor, and **Pahud Construction Ltd.**

New Expansion For Reichhold

Reichhold Chemicals (Canada) Ltd. is embarking on another major expansion phase.

The company has purchased **Varcum Chemical Corp. (Canada) Ltd.,** manufacturer of phenolic molding compounds with plant and offices at Lindsay, Ont.

At the same time, Reichhold announced plans for construction of another phthalic anhydride plant at Ste. Therese, Que. The unit will be designed to produce an additional 7 million lb. of this chemical annually.

Varcum Chemical Corp., was acquired from **Reichhold Chemicals Inc. (U. S.),** which holds a major stock interest in the Canadian Reichhold company.

It will be operated as a division of the latter company.

Reichhold Chemicals (Canada) intends to invest "considerable capital" in new facilities for production of basic resins for molding compounds and for the full production of Varcum Chemicals in Canada.

Operations of the Canadian firm last year were satisfactory, a company release states.

Operating profits were adversely affected due to a fire in the Ste. Therese plant, which curtailed production temporarily, and to restricted sales on the West Coast due to labor troubles in certain industries supplied by the company.

Since late last fall, however, both production and sales have been on a normal basis and it is anticipated that profits for current year will be on a larger scale.

TV Imports Soon Major Factor Here?

Foreign competition—already hitting radio manufacturers — may become a major factor with television makers too, according to monthly bulletin of Canadian Association of Purchasing Agents.

Japanese TV manufacturers are expected to enter North American markets this year.

So far, only a very few U.S.-made sets are imported into Canada.

The outlook for radio makers and suppliers is "bleak", the bulletin says.

There has been a substantial increase of imports, mostly from Japan and West Germany.

Other highlights of the bulletin:

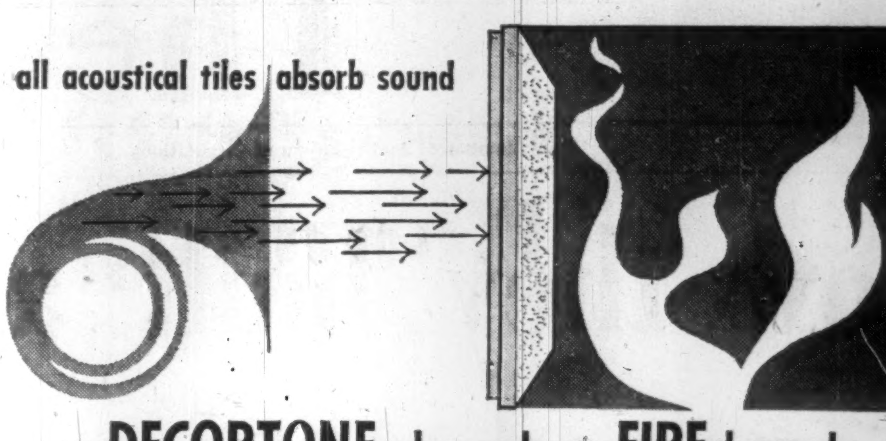
- **Healthy tone** to paper industry points to a good year.

Besides fine paper, newsprint was on upswing in 1959, with production at a record high in November, carried there by higher consumption in U. S. and overseas.

- **Aluminum prices** are up to levels of two years ago, following settlement of labor dispute.
- **Rubber consumption** in U. S. is estimated at a record 1.6 million long tons for 1959, of which one third was natural rubber.

Outlook is for slightly higher levels this year, a 5% rise on a world-wide basis.

- **Employment picture** remains fairly good, helped by municipal winter work projects.



all acoustical tiles absorb sound

... DECORTONE also reduces FIRE hazard

Subjected to thorough testing at the Underwriters Laboratories Inc., Decortone acoustical tile was given a *one hour* fire rating. This adds a new dimension to acoustical tile—sound control plus greater safety in event of fire. Decortone is incombustible — absolutely no smoke or noxious gas develops.

Besides sound absorption and fire protection, Decortone Acoustical tile is unaffected by moisture—you are assured of dimensional stability. Decortone is also easy to maintain. It can be sprayed with any non-bridging paint.

Lightweight Decortone is now manufactured in 12"x12" and 12"x24" sizes.

ANNOUNCEMENT

NAMED VICE-PRESIDENT

RAY HERGERT

Mr. L. W. Lawson, president of Canadian Food Products Limited, has announced the appointment of Mr. Ray Hergert, general manager of the Bakery Division, as a Vice-President of the company. This division includes the retail operations of Hunt's and Woman's Bakery in Eastern Canada as well as Picardy in Western Canada.

European Roundup

NEWS FROM THE BUSINESS CAPITALS OF EUROPE . . .

By ERNEST WAENGLER

WITHIN a very short time, Canada should know where it stands with regard to sales to the European Common Market of our most important export commodities.

ECM is about to publish its future external tariff for the goods on the controversial "List G" which are exempted from the general rule of the arithmetic mean between the present tariffs of all member countries.

List G contains such Canadian export staples as aluminum, wood pulp and synthetic rubber.

Also to be decided in the near future: ECM's common agricultural policy and tariffs on foodstuffs.

At present, about a third of Canadian exports to the six countries of ECM are farm and fishery products.

Negotiations concluded so far have established, at least in principle, a preferential system favoring the African possessions and affiliates of ECM members France and Belgium.

* * *

In the third quarter of 1959, the Inner Six (ECM) produced 7% more and exported 8% more than in the same period of 1958. The only soft spots, according to the most recent progress report, were coal mining and ship building.

The Canadian market has played a disproportionately large part in ECM's spectacular export expansion.

In the first half of last year, we imported a third more from the Six than in the previous year — $132.6 million compared to $99.8 million.

* * *

Switzerland has agreed to increase its food imports from Denmark in order to facilitate Denmark's entry into EFTA.

The Danes had been worried that their membership might endanger food exports by cutting them off traditional markets outside EFTA.

The Swiss have made it clear that they do not intend to increase their over-all food imports and that the preference given to Denmark would be at the expense of other suppliers.

In the first nine months of 1959, Canadian exports to Switzerland amounted to $19.9 million (compared to $26.1 million for the same period in 1958). About half of this was in foodstuffs.

* * *

Belgium is facing a year of austerity.

Hardest hit by the European coal crisis, Belgians will have to slow down their expansion and balance their budget before they can pull their full weight again.

Taxes in 1960 will be $36 million higher than last year, only half the increase originally demanded by the government.

Canadian exports to Belgium have already suffered from the slow-down. In the first nine months of last year, they amounted to $40 million, compared to $56.6 million for the same period of 1958.

In addition to grains, most of our exports to Belgium consist of industrial raw materials — aluminum, copper, nickel, asbestos etc.

* * *

Sweden is planning to increase its pitch for more export business.

In the 1960 budget, substantially larger funds are earmarked for new trade commissioners, Swedish chambers of commerce in other countries and foreign market research.

Swedish exports to Canada are still on a relatively small scale, though increasing satisfactorily.

In the first half of last year we bought $8.5 million worth of Swedish goods, compared to $6.3 million in the first half of 1958.

* * *

France has abolished the "Office des Changes", the government office in charge of allocating foreign currencies to importers and other private individuals.

Its functions are being assumed by the Bank of France and other banks authorized to deal in foreign exchange.

In business circles it is believed that the liquidation of the Office des Changes is the first step toward establishing full internal convertibility of the French franc.

B. C. Engineers Honor Diamond

Dr. R. W. Diamond has received the highest award of the Association of Professional Engineers of B. C.: an honorary life membership.

He is former executive vice-president, Western Region, of the **Consolidated Mining & Smelting Co. of Canada**, and president of the **West Kootenay Power & Light Co.**

Dr. Diamond is now retired and lives in Calgary.

Dr. Diamond has been much honored for his contribution to the engineering profession.

Last June he was presented with an honorary membership by the Engineering Institute of Canada, the Institute's highest honor.

He is holder of six senior professional medals, including the Gold Medal of the Institution of Mining and Metallurgy (London) awarded in 1956 "in recognition of distinguished service to the mineral industries in Canada."

Extend Power To Rural B. C.

British Columbia government and B. C. Power Commission will undertake a joint program of extending electrical service to rural areas.

Program provides for a subsidy which will make electrical service available to 3,000 hard-to-reach customers over a three-year period.

Capital costs are expected to reach $4 million, while the subsidy to meet operational losses will be an annual cost to the government of not over $200,000.

Plan will take in electrical service to 80 to 90 communities which lack service now.

Program also provides for assistance where the capital cost of extending service is over $800 per customer.

A ceiling of $1,600 per customer is set on capital costs but this may be exceeded if the customer agrees to meet costs over that figure.

THE INVESTMENT FUNDS

Can. General Share Value Down 6% Sept.-November

Canada General Fund Ltd., Canadian mutual investment fund owned predominantly by U. S. investors, reports net asset value of $14.00 per share at Nov. 30, 1959, down 6% from $14.89 at Aug. 31, 1959.

Subsequent firmer stock market resulted in a rise in net asset value per share to $14.42 on Dec. 15, President W. F. Shelley reported.

Total assets at $89,068,308 were 7.5% lower than $96,275,460 three months earlier.

During the quarter, the fund purchased common stock of **Charles E. Frosst & Co.** and **Traders Finance Corp.** and **Nova Scotia Light & Power** rights. Holdings of **Powell River Co.** were sold and additional stock of **MacMillan & Bloedel "B"** purchased. The fund increased holdings in **Imperial Oil** and reduced five other securities.

Here are the portfolio changes made during the quarter in detail:

Stock	Amount held Nov. 30 1959	Change since Aug. 31 1959
	— shares —	
Canada Cement	4,000	—4,000
Imperial Investment	30,200	—5,500
Traders Finance Corp.	1,350	+1,350
MacMillan & Bloedel 'B'	64,575	+13,975
Powell River	nil	—16,075
Imperial Oil	53,045	+1,800
Triad Oil Co.	118,200	—26,000
Great Plains Devel.	35,800	—5,400
Calgary Power*	23,950	—14,500
Nova Scotia L & P rts.	60,740	+60,740
Chas. E. Frosst & Co.	15,000	+15,000

*Adjusted for stock split.

Grouped Income Assets Up Per Share Value Drops

Grouped Income Shares Ltd., Vancouver, net assets at Nov. 30, 1959 totaled $8,920,401, an increase of 0.8% over $8,852,828 reported at Aug. 31, 1959.

Net asset value per share decreased 3.3% to $3.79 at Nov. 30, 1959 from $3.92 three months earlier.

During the quarter ended Nov. 30, the fund purchased **British Columbia Electric**, 6% bonds, due 1984 and reduced its holdings of **Imperial Investment** notes.

Increases in the holdings of 16 stocks were made during the quarter, including three pulp and paper companies, three steel companies, as well as **Calgary Power Ltd.** and **Massey-Ferguson Ltd.** One stock was reduced, one liquidated and one added. These were all U. S. securities.

Here are the changes for the quarter in detail:

Bonds	Amount held Nov. 30 1959 $	Change since Aug. 31 1959 $
B.C. Elec., 6%/84	100,000	+100,000
Imp. Invest. notes	85,000	—50,000
Common	— shares —	
Boeing Airplane	nil	—2,496
American Motors	3,100	+3,100
Ford Motor	1,500	+500
Reichhold Chem.	3,060	+60
Int'l. Tel. & Tel.	1,200	—1,000
Raytheon Co.	1,835	+300
Massey-Ferguson	17,250	+750

MEMBER OF THE FEDERAL DEPOSIT INSURANCE CORPORATION

Coronation Pays Higher Dividend

Quarterly dividend rate of **Coronation Mortgage Co.,** Vancouver, has been increased from 9c to 12½c a share, beginning with the Jan. 31 payment to shareholders of record Jan. 15. Three quarterly payments had been made at the old rate.

Coronation has bought 99.1% of the issued stock of **Société d'Entreprise du Canada,** a 22-year-old Montreal lending firm. Coronation's President Dennis L. Clayton said that "in due course" it was expected that additional offices would be opened in other parts of Quebec, augmenting the subsidiary's existing facilities in the Montreal area.

Coronation Mortgage has enjoyed "considerable growth" in its current fiscal year, which began Aug. 1, Clayton said.

Net profit for the first three months equaled 21c per common share, compared with 58c for the entire previous fiscal year.

Accounts of Société d'Entreprise du Canada will be consolidated with those of the parent company from Nov. 1, 1959.

A STAKE IN CANADA

Northern's manufacturing plants, warehouses and offices in many cities across the Dominion represent a great investment in Canada. This brings to each community revenue in taxes and the purchasing power of Northern Electric employees. This investment continues to grow with the growth of the Company.

Northern Electric designs, manufactures and installs a large proportion of Canada's telephone communication systems and equipment. This experience is invaluable in the development of materials and systems for Canada's Defence Communications. Northern Electric also produces all types of electrical wires and cables for communication and power transmission.

At Northern Electric, product research and development never stops and advances are continually being made.

CURTISS WRIGHT'S air-car, on demonstration in New York.

Plan to Make Air-Car In Canada During '60

Canadian Curtiss-Wright sees big sales potential in our mining, oil, forest and construction industries . . .

By DAVID FRANCIS

Canadian Curtiss-Wright Ltd. intends to produce its U.S. designed air-cars in Canada some time this year.

No concrete plans have been made as to where or when, according to John Morris, sales manager, equipment division, Montreal.

However, the company is offering delivery of two models of the air-cushion vehicles in the latter part of February from limited production of a South Bend, Indiana, plant of the parent firm, **Curtiss-Wright Corp.**

Production of these advanced versions of the air-car started in February. The prototype has already been demonstrated in New York.

Prices for Toronto and Montreal have been set:

- **At $7,500** for the Bee, a compact, two passenger vehicle that travels up to 56 mph with a 100 hp engine.
- **And at $17,800** for the "Model 2500", a two-engine, 300 hp vehicle that seats four.

Morris says the vehicle should prove useful to the mining, oil, forest and construction industries for off road travel in Canada's North.

The air-cars,' he noted, can travel over any unobstructed terrain — water, snow, ice, mud or swamp.

One group of hunters, he said, wants to buy a Bee for its expeditions to remote lakes.

Weighing only 750 lb., the air-car can be flown by plane to the lakes and then used for travel over both water and land.

In New Jersey, a realtor has bought one of the cars to carry prospective customers into a giant subdivision to view house sites, avoiding long hikes across the sea of mud.

Other suggested uses: Mail delivery, rescue work during floods, transportation to offshore oil installations, fast ferry service over water, military landing craft, access to mining pit heads.

Geological groups and western provincial governments have shown interest in the car, Morris says.

The air-car is supported over any surface by a cushion of low pressure, low velocity air sandwiched between the vehicle and ground.

Air escapes from beneath the car, but is constantly replenished by an engine driven fan. The air contained within the body of the vehicle is used for both propulsion and control.

The air is allowed, as desired, to escape through vanes, much like venetian blinds, located at selected points about the body.

The vanes are controlled by the driver from a steering wheel and accelerator that automatically selects the proper combinations of opening and closing to steer, propel and brake the vehicle.

Height from the ground varies between 6 in. and 12 in., depending on how much of air supply is being used for forward propulsion.

Air pressure of 1/10 lb. sq. in. can create some dust or spray, but this is directed rearwards, Morris says.

The first of the new air-car models, when they come off the production line early in February, should be able to climb a grade of about 15%.

The air-car tilts with the grade, since it always tends to remain parallel to the ground.

Air-car lighting, instrumentation and general appointments are similar to that of a conventional car or truck.

Anyone who can drive a car can operate an air-car, Morris says.

Fuel consumption is said to be .45 lb. per hp hour, which works out to 6.2 gal. per hour for the Bee.

The Bee is being made of molded fibreglass; the larger vehicle of both fibreglass and aluminum.

Air cushion vehicles are just now coming into prominence.

In the U.K. the **Saunders Roe** Hovercraft SRN-1 has traveled across the English Channel on a layer of air.

Its designers talk of the possibility of a 10,000 ton craft capable of skimming across the Atlantic at 100 knots.

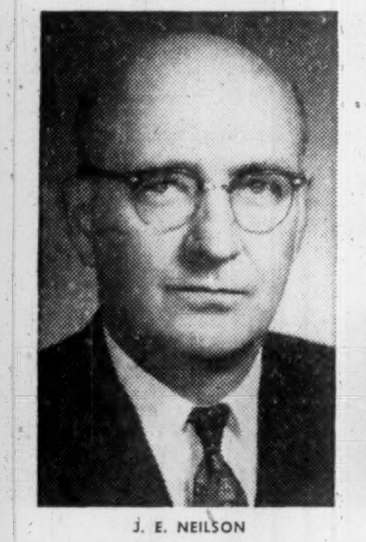
A vehicle this size would ride more than 40 ft. above the surface they say.

They add that a ground cushion vehicle uses only about 25% as much engine power per ton as an equivalent aircraft and could carry about twice the payload.

The ability of such a "ship" to avoid submarines and escape the necessity of docking at a harbor makes its importance obvious.

Some 30 companies in the U.S. are interested in the development of ground cushion vehicles, including **Ford, Grumman Aircraft, Hiller, Lockheed, Martin, North American Aviation, Piasecki Aircraft and Spacetronics Inc.**

ANNOUNCEMENT



J. E. NEILSON

G. MACNOE

At the December meeting of the Board of Directors of Foster Wheeler Limited, St. Catharines, Ontario, Mr. James E. Neilson was elected President and Chief Executive Officer of the company.

Mr. Neilson, a graduate in Mechanical Engineering from Queen's University, Class of 1928, joined the Foster Wheeler organization in 1934 and has been Executive Vice President of the company since 1955.

He succeeds to the Presidency upon Mr. George Macnoe's retirement from active executive responsibilities.

Mr. Macnoe, who has held this position since the inception of the company in Canada in 1927, will continue as Chairman of the Board of the company.

Of course, this crack train isn't likely to pull in at your Imperial Esso service station, but it, too, is an important Imperial customer and plays quite a part in your everyday driving.

Why competition among oil companies for customers like "The Canadian" benefits you

You and customers like the railroads want to be sure that you are getting the best products, the best service and the best price.

In Canada there are 74 oil companies competing to serve you and your car. Imperial is one of them and has 13,000 people working in oil fields, research laboratories, refineries and sales forces—all helping to compete for business.

The standards of quality, service and price that it takes to win railroad business benefit all our customers, large and small.

That's one reason Canadians have made Esso stations the busiest on Canadian roads.

McLean, Budden Units Show 4% Gain in Fourth Quarter

MONTREAL (Staff) — Net asset value per share of **McLean, Budden Ltd.** Investment Management Fund Dec. 31, 1959, was $15.60, up 4% from $15 at the end of the previous quarter.

A dividend of 12c per unit (11c a year ago) was paid for the fourth quarter.

Total distribution for 1959 was 47c (45c) per unit.

A higher rate of dividends for at least the first quarter of 1960 is expected.

Portfolio changes in the fourth quarter involved purchase of $80,300 in defensive securities ($63,800 bonds and preferred stocks and $16,500 convertible securities) and $23,700 in common stocks.

Common stock purchases comprised $9,600 invested in U. S. securities and $14,100 in Canadian.

Here are portfolio changes during the fourth quarter of 1959:

Boards, Commissions Have Too Much Power?

This Ontario study says they have a place in our government, but it picks out some bad points . . .

Boards and commissions have a "useful and necessary place in modern government machinery."

That is a general conclusion of the Gordon committee which has been studying organization of government in Ontario for over a year.

Its 467-page report and appendices were released by the government at mid-week.

But despite the established place of subordinate agencies in framework of government, the committee recommends some tightening of procedures, certain organizational changes and some legislative changes to protect parliamentary principles.

Walter L. Gordon was chairman of the committee. Other members were Dr. W. A. Mackintosh, principal of Queen's University, and C. R. Magone, Q.C., former deputy attorney general of Ontario. J. M. Smith was secretary.

The committee lays down four principles against which it measured the present pattern of agencies: Ministerial responsibility, financial accountability, need for grouping of related functions and provision for appeals.

Among highlights of its findings and recommendations;

- **It found a number of statutes containing "privitive clauses"**— sections trying to remove an agency's decisions from supervision of the courts.

Such clauses should be rescinded, the committee urged.

- **It found several agencies that do not now provide annual reports** to the legislature although such reports would assist legislative members to exercise control.

They should be required to table annual reports.

- **The report singles out the Liquor Licence Act for attention in regard to appeals.**

Decision to cancel a licence or franchise, unlike the original granting of the privilege, should be open to "the full range of judicial supervision and review."

While admitting the soundness of actual policy of Liquor Licence Board, the report recommends that appeals should be permitted on decisions to cancel, suspend or failure to renew a licence.

- **Quasi-judicial bodies should follow established codes of procedures,** give reasons for their decisions, report annually through a minister to the legislature.

- **Department of Municipal Affairs should be expanded to handle all responsibilities of government** in municipal field, ending the division of authority that now exists.

- **The number of government departments** should be reduced, or, should not be increased.

Grouping related functions would help stem any growth of government agencies.

- **The Treasury Board should be strengthened** with full-time staff to study continuously proposals originating from departments, boards and commissions.

- **Powers of the Farm Products Marketing Board should be limited** to screening of and initial recommendations for the establishment of farm marketing plans.

In future, supervision of plans should be with Department of Agriculture, not with the board.

- **Administrative functions of Ontario Fuel Board** — including supervision, inspection and licensing — should be removed to the new Department of Energy Resources.

One of the problems studied by the committee centred on delegation of powers by Parliament.

The report suggests that risks can be reduced if details of policy are included in the governing statute.

Powers granted should be kept to the minimum to further reduce risks, the basis being whether a particular power is needed by the board to do its job.

An example:

Liquor Control Board has power to expropriate land. Although it is never used, the power is unnecessary, the committee report contends.

Another problem studied: How to supervise or review operations or decisions of subordinate agencies?

Besides ministerial responsibility, legislative body can exercise control if the agencies lay before it annual reports.

The committee felt there were 11 bodies which might be expected to table annual reports but which do not do so now.

They are: Milk Industry Board, Ontario Fuel Board, Ontario Municipal Board, Ontario Municipal Improvement Corp., Ontario Labor Relations Board, Ontario Securities Commission, Farm Products Marketing Board, Housing Corp., Ontario Racing Commission, Soldiers Aid Commission and Ontario Junior Farmer Establishment Loan Corp.

The report recommends that all agencies, except advisory boards and departmental agencies, be required to make annual reports.

In matter of judicial safeguards, the committee found six statutes containing privitive clauses — seeking to oust the supervision of the courts over the judicial or legislative acts of subordinate authorities.

These include acts covering damage by fumes, labor relations, liquor control and liquor licensing, workmen's compensation and municipal board act.

Rights of appeal should be facilitated. Wherever possible, appeals on questions of jurisdiction and law should not be impeded.

Given good legal draftsmanship of legislation, there should be no necessity for retaining privitive clauses in the six statutes. They should be rescinded, the committee recommends.

B.C. Lumber Industry Bids To Recapture U.K. Market

From Our Own Correspondent

VICTORIA — British Columbia lumbermen — and the government—are worried about the falling-off in B. C. lumber exports to the U. K.

Harold Winch, CCF's MP for Vancouver East, caused a storm when he said recently both labor and management in B. C. would have to watch their p's and q's or they might well price themselves out of world markets.

To try to recapture some of the U. K. market the B. C. government will sponsor a tour of B. C. coast lumber operations by a group of U. K. timber importers, engineers, architects and housing planners in June.

R. W. Bonner, B. C. Minister of Industrial Development, Trade and Commerce says:

"In the last few years sales of B. C. lumber to the U. K. have fallen sharply. In 1954 exports amounted to 705,853,000 ft.

"Estimated 1959 exports are 240,000,000 ft., a decrease of 66%."

But, on the other hand, says Bonner, sales of B. C. plywood to the U. K. have increased "at an encouraging rate", and have almost reached the high point of 1947, when exports reached 93,638,410 sq. ft.

Bonner doesn't soft-pedal when it comes to saying why the B. C. government will host this costly visit from the U. K.:

"Frankly, we are out to reenter the British lumber market in a big way."

The minister says that although B. C. lumber products, in types and qualities, have nothing to fear from European competition, "every means possible will have to be taken to ensure our share of the U. K. market".

He admits price has become a problem.

"This is especially true in view of the formation of the Stockholm group of seven trading nations, which includes Great Britain and the timber-producing Scandinavian countries," he says.

The B. C. Lumber Manufacturers' Association, the Plywood Association of B. C. and allied groups will join with the government in bringing the U. K. group to B. C.

Products Tank Buys More Land

Products Tank Line of Canada Ltd., has bought 66 acres in Trafalgar township near Oakville, Ont. The land adjoins the 21-acre site occupied by **Sparling Tank & Mfg Co.,** a Products Tank Line division.

It will provide for future expansion of both Sparling Tank and other Products Tank Line divisions and brings the company's total acreage to 87 acres.

Company has no immediate plans for construction on the property.

Property lies adjacent to, and south of, the **CNR** main line and to the west of the Third Line road in Oakville.

Products Tank Line owns and leases over 8,000 railway tank cars in Canada. Divisions include Sparling Tank, **Graver Water Conditioning Co., Smith & Loveless Co., and Lindsay Co.**

See Petrochemical Growth Doubling in Canada by '65

Petrochemicals will continue to be one of the fastest growing industries in Canada over the next few years.

Demand for petrochemicals will double by 1965; production will not be far behind.

By 1965, Canadian demand for petrochemicals will be above the 4.5-billion-lb. level; that compares with a 1959 demand of about 2.25 billion lb., Clay M. Beamer, **Imperial Oil Ltd.,** told a Chemical Institute of Canada meeting recently in Toronto.

One of the most important fields for future growth will be that of plastics and resins.

It's expected that by 1965 these materials will become the most important outlet in this country of petrochemicals.

This period will see a further acceptance of plastics in engineering materials and consumer articles.

For instance, a fireproof polystyrene which will lend itself to structural applications is under development.

Phenolics are expected to find important insulation applications.

A big market booster for vinyls, as well as other polymers could be the long-awaited development of a satisfactory exterior latex paint.

Through extension of application, plastics have an important future in the roofing, ceiling, flooring, fixtures and even in the structural members of buildings.

Perhaps the brightest outlook in the immediate future for plastics is in the packaging field.

A recent market survey in the U. S. revealed more than 300 items packaged in polyethylene as compared with just 170 a year before.

Big new developments under development are for medium-density polyethylene as bread wrap and for high-density polyethylene, with its higher melting point and greater resistance, to replace metal cans for such materials as detergents and some types of oils.

Per capita production of plastics in Canada for 1958 was 16 lb., which is approaching two thirds of the U. S. figure. The lower quantity for Canada amounts to about a five-year lag.

During the past decade the production growth in petrochemicals has been about 19% a year.

"This is a remarkable rate even for a young industry not yet out of its teens," Beamer said.

ANNOUNCEMENT

NABOB FOODS APPOINTMENTS

E. L. BULLARD — M. C. SMITH — C. R. SPEERS

Henry Schmidt, Vice-President and Manager of Nabob Foods Division of Kelly, Douglas & Co. Ltd., Vancouver, announces the following management appointments:

E. L. Bullard, formerly Canadian Sales Manager, becomes Director of Marketing for Canada, with headquarters in Vancouver.

M. C. Smith, formerly Branch Manager in Toronto, moves to the Vancouver Head Office, to become Canadian Sales Manager.

C. R. Speers, presently Sales Supervisor in Toronto, becomes Branch Manager, Toronto.

Scientist Founds Research Co.

A new research firm has been formed in Ottawa by Dr. Maurice Levy, inventor of automatic mail sorting equipment and technical consultant to the Canadian Post Office.

The firm, **M. Levy & Associates,** will specialize in automation techniques and systems engineering.

Levy said his firm will offer a unique service to industry as consultants, and research, development and technical manager, in these fields.

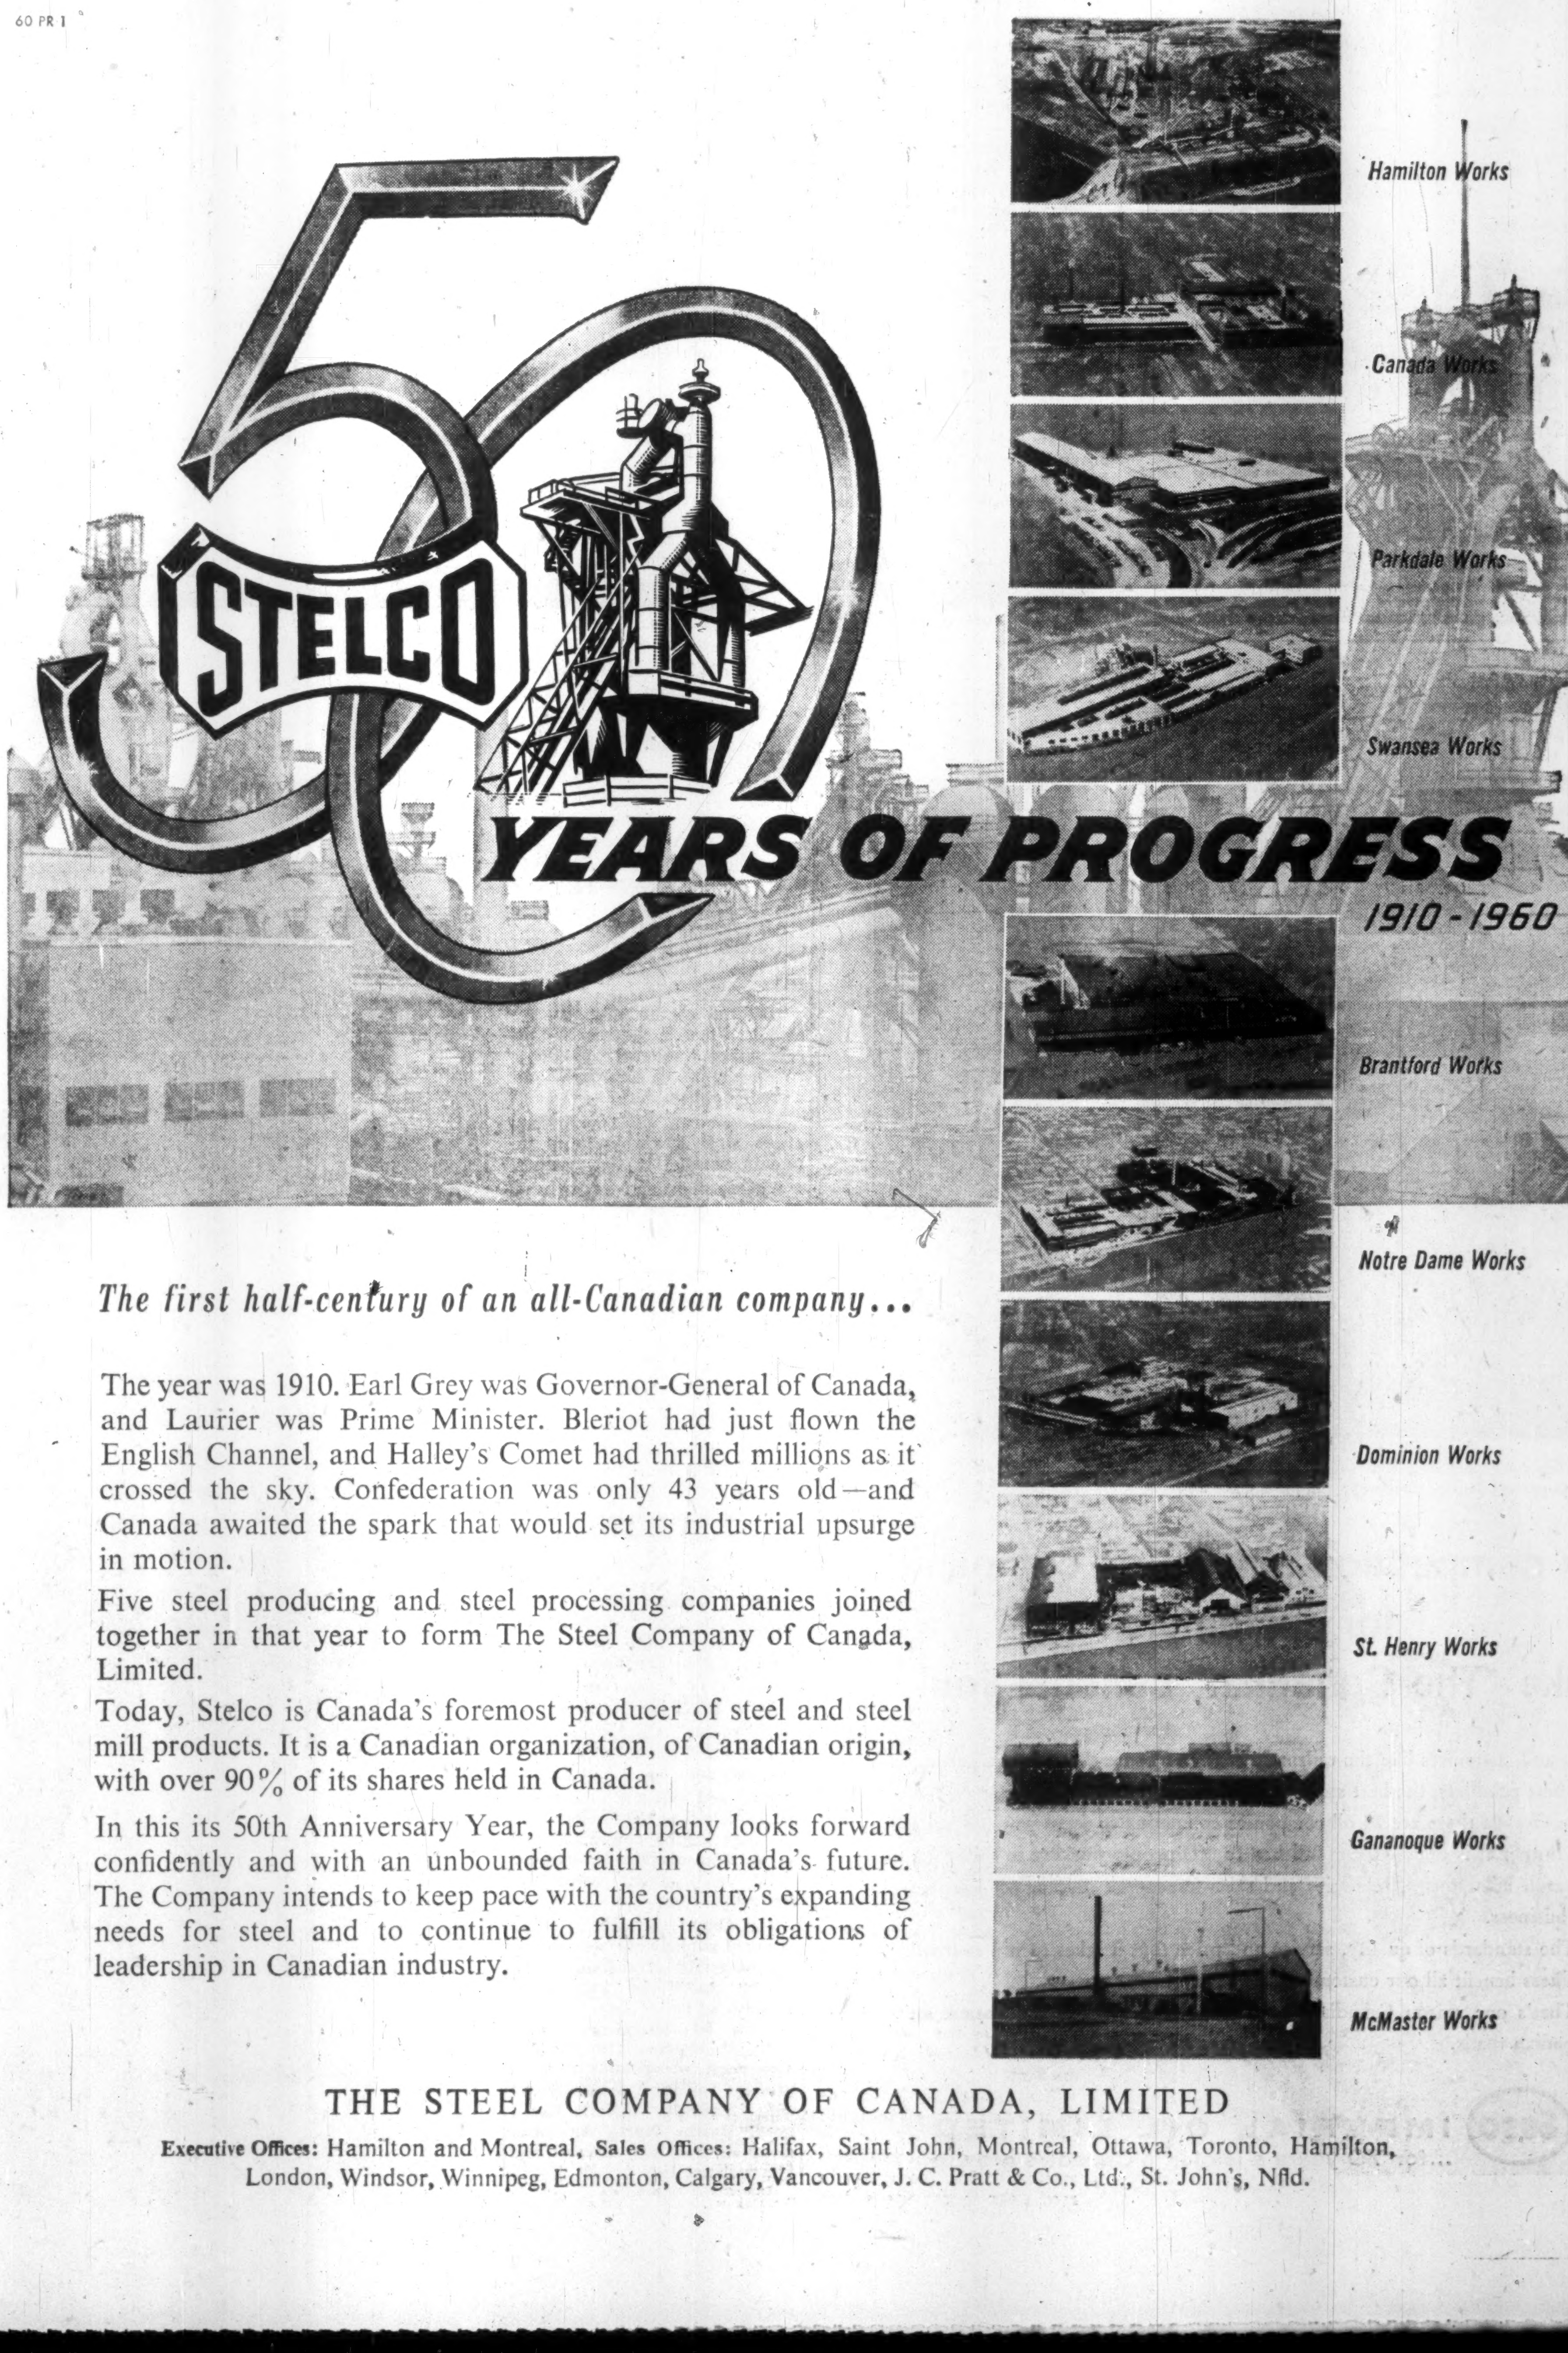
Levy is holder of 140 patents in several fields and has several scientific degrees.

He designed the first pulse time modulation multi-channel radio link in the U. K. in 1942, suggested the first electronic telephone exchange in 1946.

He was technical adviser to the Canadian Post Office until recently, and continues to act as a consultant.

SWITCH TO GAS

Miller Brothers Co., Trenton, Ont. has switched to natural gas fuel. The company is a pioneer of the Canadian paper industry producing paperboard products for the packaging industry. The company and **Lakeland Natural Gas Ltd.** signed a contract for supply of gas to the plant with maximum deliveries to exceed one million cubic feet daily.



60 PR 1

The first half-century of an all-Canadian company...

The year was 1910. Earl Grey was Governor-General of Canada, and Laurier was Prime Minister. Bleriot had just flown the English Channel, and Halley's Comet had thrilled millions as it crossed the sky. Confederation was only 43 years old—and Canada awaited the spark that would set its industrial upsurge in motion.

Five steel producing and steel processing companies joined together in that year to form The Steel Company of Canada, Limited.

Today, Stelco is Canada's foremost producer of steel and steel mill products. It is a Canadian organization, of Canadian origin, with over 90% of its shares held in Canada.

In this its 50th Anniversary Year, the Company looks forward confidently and with an unbounded faith in Canada's future. The Company intends to keep pace with the country's expanding needs for steel and to continue to fulfill its obligations of leadership in Canadian industry.

THE STEEL COMPANY OF CANADA, LIMITED

Executive Offices: Hamilton and Montreal, **Sales Offices:** Halifax, Saint John, Montreal, Ottawa, Toronto, Hamilton, London, Windsor, Winnipeg, Edmonton, Calgary, Vancouver, J. C. Pratt & Co., Ltd., St. John's, Nfld.

ANNOUNCEMENT

STEWART D. REBURN

The appointment of Stewart D. Reburn as account executive has been announced by Sales Campaigns Limited.

Mr. Reburn brings to his new responsibilities a background of experience in the graphic arts, marketing and advertising. As manager of the Toronto office of one of Canada's leading film producers, he has had wide experience in the development of this medium for industry. He will be located at the Toronto office of Sales Campaigns Limited, subsidiary of the E. F. MacDonald Company of Dayton, Ohio, world-wide sales incentive service, with offices in Canada, U.S.A., and Europe.

INSIDE THE NEWS

A column of fact and comment on national and international affairs . . .

By J. K. EDMONDS

JUST how much should a businessman's flesh creep when he hears O. J. Firestone's Fearless Forecast that we may be in the downswing phase of the business cycle in 1962?

The pattern of the cycle since the end of World War II, he points out, has shown an upswing varying in length from 33 to 44 months. This could mean a peak of economic activity in 1961, a downturn in 1962.

There's no doubt that it's useful to keep an eye on these cycle patterns, but two points should be borne in mind about this type of forecast:

- **First, the cycle is full of surprises**—if it has a genuine pattern at all, which some economists claim it doesn't.

The duration, intensity and impact of the recessions in the postwar years have all been somewhat different from what previous experience might have led us to expect.

In Canada, for example, which expects to suffer sharply from a downturn in the U. S., the latest recession proved milder than the one across the border.

The Chamber of Commerce of the U. S. puts it neatly when it reports that the experience of forecasting recessions in the postwar period "suggests a low ceiling of visibility".

- **Second, the ordinary business cycle is only one of the factors affecting general prosperity.**

What we do at various stages of the cycle modifies the effect of the cycle and may have an overriding influence on employment and incomes.

In other words, we don't just ride up and down on a rollercoaster. Sometimes we get out and push, sometimes we try to drag our feet.

The advantage of cycle forecasting is that it may help us to do these things at the right time in order to keep our rate of movement as steady as possible.

But often we do things for quite other reasons, that affect our rate of progress.

We get into trouble when one of these things we do for other reasons coincides with the wrong phase of the cycle.

Separating the real cycle changes from all the other influences on the economy is something that requires an elaborate statistical calculation after the event.

Now there are a great many things Canadians would like to do now, but are afraid to do precisely because we are in an upswing and face to face with inflation.

The same is true of the U. S.

Two of the outstanding examples of programs regretfully postponed are investment in education and massive aid to underdeveloped countries.

Slum clearance, hospital building, northern development and a host of other programs are being shelved because of the pressure under which our economy is operating.

If that pressure lessens — either because of the operation of the cycle or because of a sharp drop in defence spending — these programs will then become physically possible.

What we should do now — especially in view of Mr. Firestone's comments — is make sure we have fast-moving machinery with which to put these programs into effect without delay once we begin to detect a slackening.

There are signs that the U. S. is doing exactly that.

The Foreign Aid plan that will go before the present session of Congress has disappointed many Americans and outsiders because it doesn't involve the amount of money that is necessary to make any real dent in the problem of underdevelopment.

But what it **does** do is refine the machinery for handling such aid, so that if the pressure of defence spending lessens, foreign aid spending can be quickly increased.

The same is true of many of the international plans now being set up — the UN's new development fund, the discussions in OEEC about foreign aid programs on a co-operative basis.

In the Colombo Plan, of course, Canada (and the U. S.) has access to a really efficient means of channeling foreign aid.

If the costly cold war ends — or if for any other reasons inflationary pressure drops—there will be no time wasted haggling over legislation to enable us to do the job that needs doing abroad.

We need similar preparations at home.

Now is an excellent time to overhaul our housing act, our various education programs, our welfare arrangements — so that when (and if) we do feel able to loosen up on these things the resources will go where they will do the most good.

"We" in this connection shouldn't mean just the government.

Business firms now postponing programs because money is tight should heed the second part of Mr. Firestone's forecast as well as the first:

The probability that the second half of the 1960s will see an upswing.

Taking the two comments together, 1962 looks like a good year to provide a firm with a sound basis on which to handle the anticipated expansion.

If many firms act on that idea by investing in plant and machinery, we may not notice the downswing at all.

* * *

Efforts to bring organized labor and organized farm groups into harmonious political action won't get much help from a recent statistical report issued by DBS.

Opening sentence of the latest bulletin on Price Index Numbers of Commodities and Services Used by Farmers is this:

"The slight upward movement of the All Canada Composite Price Index of Commodities and Services Used by Farmers in the April to August period, was almost entirely due to the influence of higher wage rates."

What the report means, as the next paragraph makes clear, is the wage rate paid to farm help.

But three sentences about the index itself intervene between the opening sentence and the following paragraph, so that the hasty reader may never get to the explanation, and may jump to the conclusion that industrial wage rates are the cause of the rise — a conclusion that many farmers reach quite easily without any help, and one that the political wing of the CLC is trying very hard to offset.

There is a real implication for farmer-labor solidarity in all this, as well, of course.

One reason for the impact of farm wage rates on farm costs is that modern mechanized farms are hiring more skilled labor, and that fewer farms are operated entirely by members of the farmer's family.

This gives the farmer an employer's interest in the nature of wage demands to add to the consumer's interest of which he has long been acutely conscious.

All of which doesn't make it any easier to bring about a stable political merger between farm and labor groups.

* * *

The latest issue of the NATO Letter contains a glowing account of the new permanent headquarters of the North Atlantic Treaty Organization at Porte Dauphine, Paris.

The building got its first workout at the ministerial meeting Dec. 15.

Unfortunately, this brings to mind Parkinson's Other Law.

In addition to his well-known law of employment (work expands to fill the time that is available to do it) Parkinson has also demonstrated that organizations do their best work in shocking, inadequate quarters, and build gleaming new headquarters just when their power is about to decline.

The India Office in London is one of his cases in point.

In the heyday of the British Raj, India House was the subject of many unkind witticisms in novels and plays.

The provision of adequate quarters for the administration of the Indian Empire coincided neatly with the beginnig of the process which turned India into a sovereign republic.

There are other examples in Parkinson's persuasive argument.

Perhaps it's not surprising that the description of NATO's new home appears in the same issue as an uneasy analysis of Paul-Henri Spaak of the political future of NATO.

If Parkinson is right, NATO might have been more prudent to remain in the temporary, prefabricated structures that have disfigured Paris for so long.

Company Report

AMUREX OIL had a net loss of $310,695 in the year ended Aug. 31, 1959 (loss of $747,899 in the preceding fiscal year).

Increase of 54% in gas sales to $84,126 helped offset an 11% dip in crude oil sales to $906,784. Total operating income was down 7.5% at $990,910.

Early in the fiscal year the drilling subsidiary **Devon Drilling** was disbanded and the drilling equipment was sold. Another subsidiary **Ponder Oils Inc.** with interests in Texas and Montana was merged into the parent company.

CLARK EQUIPMENT Mobility

Moving more... faster, higher, more efficiently

Mobility is efficient movement . . . both in horizontal and vertical planes. Lifting heavier loads higher and faster is vertical mobility. It multiplies space utilization without loss to speed or convenience. Specializing in mobility through its materials handling, construction machinery and trailer divisions, Clark Equipment Company offers you this specialized aid to cut *your* handling costs.

Flash Annual Report to Shareowners
GEORGE WASHINGTON'S RAILROAD
1785 1960
CHESAPEAKE AND OHIO RAILWAY

On its way . . . the first business day of '60

Again Chessie starts the New Year by sending to its 90,000 shareowners on the first working day of 1960 the results of the previous year's operations, shown in the highlights below.

Chesapeake and Ohio, on the threshold of its 175th anniversary, ended the year stronger, financially and physically, than at any time in its long history. Working capital rose above $60 million, highest level ever.

Freight revenues produced an excellent first half-year and held up well despite the steel strike. Revenues from merchandise freight increased $10 million and non-export coal traffic showed a similar $10 million increase. C&O progress also was marked by eighty new industrial plants locating along its 5,100-mile system.

With the favorable general business predictions for '60, a year of uninterrupted industrial activity would mean C&O revenues and earnings greater than 1959.

1959 HIGHLIGHTS

	1959	1958

Plants in TORONTO · MONTREAL · VANCOUVER

MOST FLORISTS buy their flowers from big wholesalers, with acres of greenhouses. Here, skilled greenhouse workers de-bud dwarf chrysanthemums.

Special Displays Our $55 Million Trend in Flowers

Special Correpondence

OTTAWA — The Canadian florist, perhaps more than any other retail businessman, depends for his livelihood on imagination and creativity.

Canadians spend some $55 million a year on corsages, floral centrepieces, cut flowers, bouquets and potted plants.

However, no one has to buy flowers.

Custom, aesthetics plus advertising dictate flower buying.

While some retail florists have their own greenhouses (an Ottawa florist grew 10,000 poinsettias under glass for last year's Christmas market) most retail florists buy their flowers from wholesale florists such as:

- **The Dale Estate,** at Brampton, Ont., which has 35 acres of greenhouses.
- **Medicine Hat Greenhouses** in Alberta, which heats its greenhouses with natural gas.
- **Mount Bruno Flower Co.** of Montreal.
- **Langley Greenhouses,** near Vancouver.
- **Avon Valley** of Falmouth, N.S.

To the raw flowers bought from the wholesaler, however, must be added the know-how and skill of the trained floral designer.

Few florists send loose flowers in boxes to customers anymore.

The trend is to floral arrangements — sometimes in vases supplied by the florist, or, for teas and table decorations, in vases brought to the florist's shop by the customer.

This trend started when hospitals no longer had staff to arrange flowers sent to patients.

Then florists started selling arrangements to homes, rather than have the customer arrange the flowers clumsily at home, and then be disappointed with the flowers.

Materials such as styrofoam, and oasis in which flowers are arranged, has also speeded this trend, since they make it easier to send flower arrangements which will be as perfect when they arrive as when they left the shop.

At one time, a florist depended almost exclusively on business from his own area.

Now, the teletype brings florists belonging to the Florists Telegraph Delivery Association business from all over Canada, the U. S. and Europe (where FTD is called Interflora).

A customer can give an order to an Interflora florist in London or Copenhagen and have the flowers delivered in Toronto the same day.

The post-war immigration wave has stimulated the flowers-by-wire business, since Europeans send more flowers than Canadians.

Flowers-by-wire used to account for 8% of flower sales, now they make up 15%.

Like many businesses, the flower business is a seasonal one.

Christmas, Mother's Day and Easter are the days when the florist and his staff work day and night.

Valentine's day and St. Patrick's day also help keep him in the black.

Then there are wedding flowers, birthday and anniversary flowers; corsages for dates and VIP's wives; hospital flowers; flowers - to - make - her - forget she - was - mad.

Business is also using more flowers than ever before.

Flowers are an important part of the opening of any new business.

They are also used for promotion at such events as automobile shows, fashion shows, etc.

New supermarkets sometimes give every customer a rose or even an orchid.

Flowers are often wired to out-of-town clients when they launch new businesses or acquire new heirs.

What's New

New products, new uses, new ideas, new money-makers. FP reports them here and invites contributions. Write to FP, 481 University Ave., Toronto.

FIZZ AND BUBBLE — but no hangover — comes from non-alcoholic champagne designed for teen-age parties and non-drinkers. It's packaged in a green bottle with a cork, secured by wire and covered with gold foil. New York maker says it tastes very similar to its alcoholic counter part.

* * *

PAINTINGS hanging on the wall can disguise a radio. West German firm has a line of paintings with complete AM-FM or AM-Short Wave radios built in. The wall radio has pushbuttons, tone and volume controls and connections for a record player.

* * *

COMBINATION pocket knife, watch, nail file and billfold is produced by West German firm. There's also space for a monogram or advertising imprint.

* * *

AUTOMATIC bird feeder caters to small birds, but not the ill-mannered larger varieties. It shuts its door in the face of anything as bulky as a bluejay or squirrel. The feeder has glass sides. In front of the doorway: A perch that doesn't shift under a light bird. Under a big bird, however, the perch dips and pulls down the door, dislodging the unwanted visitor. By shifting a weight, you can control the acceptable size of guests.

* * *

SHADE or seclusion for a change of clothing is provided by a new outdoor umbrella. It does double duty as a cabana. A specially devised top permits a flow of air when the cabana is in use.

* * *

ANTIFREEZE, water and rust inhibitors can be replaced by an all-year cooling system fluid for car and truck engines, maker says. It eliminates need for seasonal draining and flushing and offers corrosion protection, the manufacturer claims. It consists of a glycol base, a complex inhibitor system and de-ionized water.

* * *

SPRAY your lawn into place! A U.S. paper company sells a slurry of grass seed, fertilizer, and other additives, mixed with a specially prepared wood pulp. It's blown over the ground in a single application and dries quickly to form a papier-mache-like blanket that encourages seed germination and provides protection from erosion. It's intended to coax grass to grow on barren, sloping highway embankments.

* * *

REMOTE CONTROL television switch allows you to turn your set on or off from your easy chair without getting up. No tools or wiring installation required. You plug a device into the present outlet, then plug the TV into the device. A cord connects the turn-off device to the switch you hold.

* * *

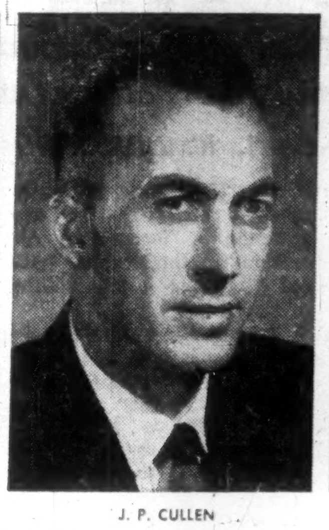
LUMINOUS COMPOUND derives its light-emitting qualities from biochemical reactions — no radioactivity. The Norwegian developed material is produced by a special process involving fresh milk and zinc sulphide. It can be applied to metal, glass, wood, textiles, paper and paperboard, the maker says. It is insoluble in water, can withstand exposure to the weather for long periods, and re-charges itself in daylight.

NEW LITERATURE: Canadian **General Electric Co.,** Toronto, has two bulletins on speed recorders for process industries . . . Bulletin on abrasive jetting service of **Dowell Division of Dow Chemical Co.,** Tulsa, Oklahoma . . . Specification bulletins explain engineering features of two new tractor shovels made by **Yale & Towne Manufacturing Co.,** Trojan Division, Batavia, N.Y.

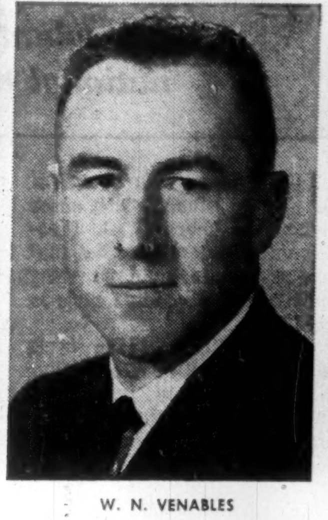
ANNOUNCEMENT

RODELL CORPORATION LIMITED AND ASSOCIATE COMPANIES

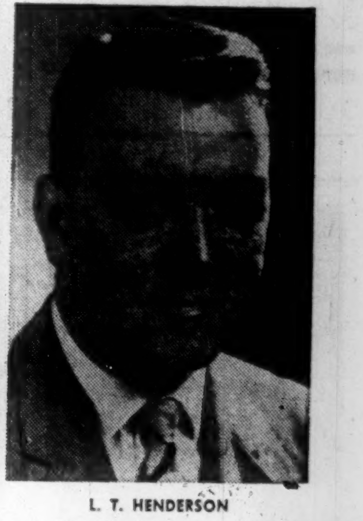
R. W. WOOTTON



J. P. CULLEN



W. N. VENABLES



L. T. HENDERSON

Mr. R. H. McIsaac, President, Rodell Corporation Limited with Head Offices in Winnipeg, is pleased to announce the following senior executive appointments:

R. W. WOOTTON, R.I.A., named General Manager of Rodell Corporation Limited, and its Associate Companies — Midwest Diamond Drilling Limited, Delro Industries Limited, Midwest Mining Supplies Limited. Mr. Wootton comes to Rodell Corporaton from Deloitte Plender Haskins and Sells, Chartered Accountants, where he was a Senior Consultant and Western Regional Director in their Management Advisory Services Division.

J. P. CULLEN, General Superintendent, now becomes Manager of Midwest Diamond Drilling Limited.

W. N. VENABLES, P.Eng., Plant Manager, now becomes Manager of Delro Industries Limited.

L. T. HENDERSON, General Sales Manager, now becomes Manager of Midwest Mining Supplies Limited.

Offer Lectures on Investment in Nine Cities

Evening courses in investing, designed for the beginner, are being launched this month in nine Canadian cities.

The lecture series are co-sponsored by the Investment Dealers' Association of Canada and the extension departments of various educational bodies.

Here are cities in which IDA courses are offered, together with date of the first weekly lecture:

- **Vancouver,** University of British Columbia, 10 lectures, Jan. 13.
- **Burnaby,** Board of Education, 10 lectures, Jan. 11.
- **Edmonton,** University of Alberta, eight lectures, Jan. 26.
- **Calgary,** University of Alberta, eight lectures, Jan. 28.
- **Saskatoon,** University of Saskatchewan, nine lectures, Jan. 26.
- **London,** G. A. Wheable Collegiate & Vocational Institute, nine lectures, Jan. 14.
- **Welland,** Board of Education, nine lectures, Jan. 7.
- **Montreal,** McGill University, 10 lectures, Jan. 21.

In Metropolitan Toronto, IDA is soon to resume its abbreviated series of five-lecture courses in business. Investment principles will be explained to workers at the plants and offices of **Simpsons Ltd., Shell Oil, Massey-Ferguson Ltd., Toronto Star** and **General Motors.**

Similar courses were held during the fall at General Motors, **Ford of Canada** and **Canadian General Electric.**

Montreal Bank's New Promotions

A. C. P. JONES, a special representative, Calgary, Alta., to be a special representative, New York.

J. H. HUNTER, superintendent's dept., Calgary, to be a special representative, Calgary, Alta.

G. C. SLACK, manager, Kirkfield Park, Man., to be manager of a new branch opening shortly at Academy Rd. & Lanark St., Winnipeg.

J. E. TOTEN, an assistant superintendent, western credit dept., head office, Montreal, to be associate economic adviser, head office.

T. A. B. LARSON, manager, Williams Lake, B.C., to be manager, Nanaimo, B.C.

C. D. GILLILAND, manager, Kitimat, B.C., to be manager, Nanaimo, B.C.

R. L. NELLES, assistant general manager's dept., Winnipeg, to be manager, Williams Lake, B.C.

L. W. ELLIOTT, accountant, Oshawa, Ont., to be manager of new branch opening shortly at Kingston Rd. & Fenwood Heights, Scarborough, Ont.

D. S. STEWART, accountant, West Toronto, to be manager of new branch opening shortly at Royal York Rd. & Trehorne Dr., Weston, Ont.

D. R. McCALLUM, assistant superintendent, international department, head office, to be a superintendent, international department, head office.

WHAT MAKES BUICK RIDE SO BEAUTIFULLY ?

Buick's superb new suspension system boasts big, buoyant coil springs at each wheel—giving a finer, more stable ride. Makes Buick unusually easy to handle.

WHAT MAKES BUICK STOP SO SURELY ?

Buick's powerful Air-Flo Aluminum brakes, the most advanced in the industry—are air cooled to prevent brake fade-out. Give the safest stops on the road.

WHAT MAKES BUICK RESPOND SO EFFORTLESSLY ?

Buick's choice of four new Wildcat engines and the new high spirited Wildcat 445 provide unsurpassed performance with improved economy.

WHAT MAKES BUICK MOVE SO SMOOTHLY ?

Buick's famous Turbine Drive transmission—the most advanced automatic transmission in the industry. No gears—just turbine blades that automatically adjust to your driving speeds.

Books For Businessmen

THE IMAGE MERCHANTS, by Irwin Ross; Doubleday, Toronto; 271 pp.; $5.

An entertaining history of the public relations "industry" in the U. S., and a critical examination of it as it exists today.

In sheer numbers, as well as in influence, the public relations man has grown tremendously since the early years of this century.

Despite this growth, the role of the PR practitioner is perhaps less well understood than that of any other business specialist.

To some he is a sort of witch doctor whose counsel is to be followed blindly. To others, a huckster to be tolerated grudgingly.

Ross presents a well-balanced evaluation of the PR man, neglecting neither his contributions nor his venalities.

ASK NO QUARTER, a biography of Agnes Macphail, by Margaret Stewart and Doris French; Longmans, Green & Co., Toronto; 311 pp.; $4.50.

There is beginning to appear, in books and periodicals, increased misgiving about the lack of "angry" men—people who refuse to conform, who decline to "adjust" placidly to the idiosyncrasies of our society.

This is the story of an "angry woman". Agnes Macphail was the first of her sex to be elected to the Canadian House of Commons (1921), a leader in prison reform and a woman whose strong opinions and biting remarks created dissension and discussion.

Canadians found her easy to disagree with, impossible to ignore. Because of her, they probably thought more about public issues than they would have done otherwise.

THE STATESMAN'S YEAR-BOOK, edited by S. H. Steinberg; Macmillan & Co. of Canada; 1,673 pp; $7.95.

In addition to the wealth of accurate world information on every topic of interest to politicians, statisticians, economists, geographers, journalists, teachers and students, the new 96th annual work of reference has new chapters.

These include the reorganization of France under de Gaulle, Alaska as the 49th state, the United Arab Republic and excellent new maps.

There are up-to-date answers to what, how, why and when in 61 pages devoted to Canada, the provinces and territories.

EVERYBODY'S GUIDE TO THE STOCK MARKET by Harold M. Finley; S. J. Reginald Saunders & Co., Toronto; $4.75; 246 pp.

This is a revised and enlarged edition of a book originally published in 1956. One of the new chapters contains a short section on investments. But as the book is intended primarily for the beginner rather than the experienced investor, this is perhaps one field that could have been dealt with much more fully.

Finley, investment officer of **Chicago Title & Trust Co.**, explains the simple mechanics of stock dealings, discusses such subjects as convertible debt, odd lot dealings, the Dow theory, margin requirements, brokerage services, mutual funds, etc.

The book should prove helpful to people who know very little about the market.

CAPITAL, INTEREST AND PROFITS, by B. S. Keirstead; Macmillan Co., Toronto; 171 pp.; $3.75.

For the economist, Professor Keirstead (University of Toronto) offers an interesting study of the theory of capital, and the distinction among interest, profits, and returns to stock.

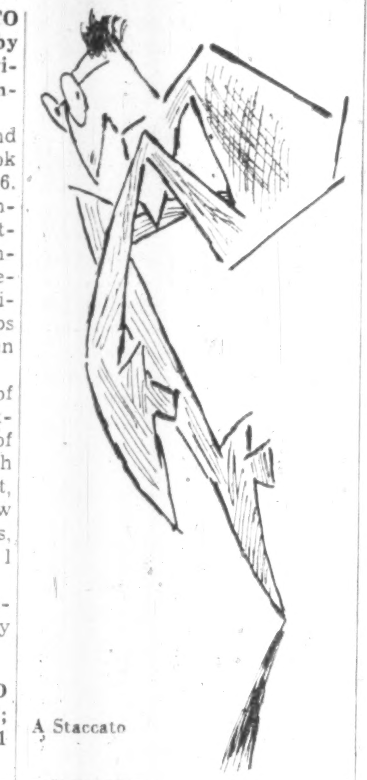
The author rejects the familiar marginal productivity theory of distribution, and the time-preference theory of interest, and warns against too much confidence in monetary policy as an instrument of counter-inflationary policy.

OIL & PETROLEUM YEAR BOOK 1959; Walter E. Skinner, 20 Copthall Ave., London EC2; 795 pp.; $7 ppd.

Newly published edition of this annual handbook contains data on 1,100 world oil companies; an international buyers' guide; names and addresses of 730 managers, engineers and agents; maps and a table of world crude oil and natural gas output 1949-58.

LIFE IN THE CRYSTAL PALACE, by Alan Harrington; McClelland & Stewart, Toronto; 263 pp.; $5.

Harrington began work in the public relations department of a giant U. S. corporation—which he calls the Crystal Palace—in 1954. In 1958, he "escaped", and set about writing this book about life behind the walls.



STACCATO, one of dozens of cartoon interpretations of music by the late humorist, Gerard Hoffnung. Hoffnung's Acoustics is published by McClelland & Stewart Ltd., Toronto, at $1.

For many generations, writers have been discovering anew the threat to the individual which is posed by the organization.

Harrington's discovery is that the vast modern corporation, while offering security and satisfaction to some workers, is not always the ideal place to work out one's role as a complete human being.

An interesting and brightly written, if somewhat incomplete and glib, picture of an important segment of North American life today.

CANADIAN MORTGAGES by H. Woodard; Collins, Don Mills, Ont.; 387 pp.; $7.

Few Canadians are better qualified than the author, who is financial adviser to **Central Mortgage & Housing Corp.**, to write a textbook on mortgage law and practice, for the student or the businessman.

Mr. Woodard's uninterrupted career in the Canadian mortgage field began in 1926. Drawing upon one third of a century of experience, he provides a comprehensive survey of all important aspects of mortgages—with some interesting historical sidelights on the development of property titles in the earliest days of Canadian settlement, and a useful outline of the mathematics of interest and amortization.

CANADA CAREERS DIRECTORY 1960; Cornmarket Press Ltd., Montreal; 112 pp.; $3.

A new project, this is an invaluable guide to business, designed for graduating and graduate students in Canadian universities (such students are being supplied with complimentary copies).

Some 55 Canadian industrial groups and government agencies describe their operations and personnel requirements. Preface is by D. W. Ambridge, president of **Abitibi Power & Paper Co.**

HANDBOOK OF BUSINESS MATHEMATICS by William R. Minrath; D. Van Nostrand Co., Toronto; 646 pp.; $11.75.

A comprehensive guide to the use of mathematics in everyday life, ranging from a consideration of the function of computers to a means of working out the true cost of owning a home.

In addition to explanations of basic mathematics, financial statements, depreciation, amortization, operations research and the like, there are dozens of useful tables of discounts, interest and yields.

EVERYMAN'S UNITED NATIONS, UN Office of Public Information, 607 pp.; $3.50.

Though this massive tome won't be read through by anybody except its own authors and proofreaders, the general reader will find it valuable as a reference work, for dipping into and even for study in part.

Its three sections deal in turn with the structure, membership and peaceful aims of UN; with questions discussed and settled, or left unsettled, in the Assembly and Security Council; and with the permanent UN agencies concerned with food, aviation, atomic energy, health, and so forth.

The second and much the longest section comes nearest to being lively reading. Objective and impartial as UN must be, it presents many of the facts and arguments about Suez, disarmament, apartheid, Palestine, the Hungarian rebellion and other hotly debated questions. The book is essential to every serious student of world affairs and will be useful to anyone who wishes to understand what goes on in UN.

THE EARTH SHOOK, THE SKY BURNED by William Bronson; Doubleday, Toronto; 192 pp.; $6.75.

At 5.13 on the morning of April 18, 1906, the earth under San Francisco and neighboring Pacific Coast towns shuddered. Although the intense tremor lasted little more than a minute, it brought much of the city crumbling down. Fire helped to spread the destruction for four terrible days.

This is the first complete words-and-pictures story of the disaster which claimed 450 lives, destroyed 28,000 structures, cost $500 million. The hundreds of photographs of the earthquake's wrath contrast sharply with an interesting group of pre-earthquake pictures of the devastated areas.

WAR MEMOIRS: UNITY 1942-1944, by General Charles de Gaulle; translated by Richard Howard; McClelland & Stewart Ltd., Toronto; 323 pp.; $6.

This second volume of de Gaulle's memoirs gives a good account of the general's struggle to win recognition for France as an independent power, and for himself and his Fighting France group as the legitimate spokesmen for their beleaguered country.

Roosevelt and to a lesser extent Churchill put many blocks in de Gaulle's way by backing other French leaders, particularly General Giraud. Relations between de Gaulle and his major allies were under continual strain as a result. The general's own personality and singleness of purpose made it difficult for others to distinguish between his personal ambition and his ambition to restore France as a strong and effective nation.

Harold Macmillan had to carry on much of the British negotiation with de Gaulle, particularly during the North African fighting and the Giraud affair. This led to some unpleasant scenes between the two, although de Gaulle suggests that this was more over the official U. K. position than a matter of personal friction.

"His (Macmillan's) independent spirit and lucid intelligence had found themselves in sympathy with the French group that desired a France without fetters. As our relations developed I sensed that the prejudices he had nursed toward us were dissolving. In return, he had all my esteem."

Eisenhower, like Macmillan, is described as being in sympathy with de Gaulle, even though his official position frequently forced him to take opposite views. "If he went so far as to support the schemes to keep us in obscurity," de Gaulle writes, "I can affirm that he did so without conviction . . . At heart this great soldier felt, in his turn, that mysterious sympathy which for almost two centuries had brought his country and mine together in the world's greatest dramas."

One of the Ruston diesel locomotives operating at Gunnar Mines Ltd.

Ruston diesels cut costs and operation overheads

The six Ruston LBU diesel locos handling the ore cars at Gunnar are showing just how low underground haulage costs can be! No doubt about it—as the savings on labor, fuel and maintenance show.

But that's not all . . . the three Ruston VEBX pressure-charged diesel engines, supplying power for compressors at the mines, are making further man-sized contributions by operating on low-grade fuel—consistently and dependably.

For complete information on these cost-cutting power units, write to your nearest Ruston office or agent.

RUSTON
diesel mine locomotives from 3½ to 10 tons
diesel engines for all mines' power supply

The Changes and the Gains

Compton's account shows the following changes:

— A capital gain of $26,692 or 267% on the original $10,000 (DBS common stock index up about 204%).

— A capital gain of $1,072 or 3% in the last year (DBS index up about 2%).

— An actual income of $1,378 in 1959 against $1,553 in 1958.

— A gain in prospective annual income of $968 or 245.6% over the 15-year period, but a loss of $100 over the past year ($1,362 indicated now against $1,462 at the end of 1958 and $394 originally).

— An increase in mining stocks to 12.8% of the portfolio's market value (3.6% a year earlier).

— An addition of eight new stocks and elimination of five, raising number of companies represented from 15 to 18.

Here is the distribution of the account:

MacNab's account shows the following changes:

— A capital gain of $28,803 or 288% on the original $10,000 (DBS common stock index up about 204%).

— A capital gain of $977 or 2.6% in the last year (DBS index up about 2%).

— An actual income of $1,530 in 1959 against $1,538 in 1958 — virtually no change.

— A gain in expected annual income of $1,225 or 277.1% over the 15-year period, and an increase of $34 in the past year ($1,667 in prospect now against $1,633 at the end of 1958 and $442 originally).

— A decrease in common industrial stocks from 82.1% to 67.6% of the portfolio's market value, and a corresponding increase in mining stocks and bonds.

— An addition of two new securities and a bond.

— An elimination of five securities and an exchange of one for two classes of common stock and a preferred, reducing number of companies represented from 20 to 18.

Principles: How the Accounts Work

The Compton and MacNab accounts are under the direction of two anonymous investment managers, carefully selected because of their high standing in the investment community, their integrity and their training.

Using a definite investment plan of his own — changed occasionally to meet changing conditions — each manager recommends buying and selling as if he were managing the portfolio of an actual client. FP assumes no responsibility for these recommendations.

Investment is a personal matter. A good investment policy for one person may be unsound for another person in another situation.

A tailor-made policy offers the investor the greatest chance of financial success.

To make Managed Investment as realistic and as valuable as possible, the two hypothetical clients, Compton and MacNab, were carefully described 15 years ago.

Compton was 38, married, had two children but no dependent relatives. His objective was divided about equally between capital appreciation and income.

McNab was 57, married, with his wife as his only dependent. His objective was maximum income consistent with safety of capital.

It was assumed that each person owned his house, had substantial life insurance by 1944 standards, and a backlog of Victory Bonds and War Savings Certificates.

Compton's and MacNab's managers advise FP of any transactions as soon as they are made. Therefore, it is not possible for the transactions to be the result of hindsight although, for mechanical reasons, the transaction may not be reported in FP until a week or more later.

Managed Investment is designed to illustrate, by actual example, the principles of sound investing based on experience, knowledge and constant attention.

Purchase or sale of any stock should not be interpreted as a recommendation that other investors should take similar action.

Stelco Output Sets Record; Looks for Good Year in '60

- *Steel ingot production 3% above previous peak . . .*
- *Simpsons' sales up, but '59 profit may have been down . . .*

By NESTOR

SIMPSONS LTD. shared in the general year-to-year improvement in Canadian department store sales in the pre-Christmas period. Company's turnover showed a satisfactory increase over the year before and in relation to 1958 was at a more buoyant level than during November.

(Department store sales across Canada in the two weeks preceding Christmas posted gains of 5.5% and 24.3% over the corresponding 1958 weeks.)

While it is too early to predict accurately Simpsons' net earnings for 1959, FP understands that they will be down moderately from a year ago.

Net profit in 1958 was equal to $1.53 per share.

Higher taxes, pension payments and rising costs generally, including the cost of borrowed money, have been responsible for curtailing profits.

With sales up 6.7% in the first half of 1959, net earnings dropped to 37c per share from 45c a year earlier. The 1959 results, however, are after a $325,000 provision for the retirement security plan; after taxes, this reduced net by about $160,000. There was no comparable charge in 1958.

Outlook for the first half of this year is for modest increases in sales and net earnings. Costs, which continue to edge higher, will be a big factor in determining profit levels.

Net profit of **Simpsons-Sears** (50% owned by Simpsons Ltd.) for the first 11 mos. of 1959 was running at about the previous year's level. (Company's share of Simpsons-Sears' 1958 net profit—$2,819,887, equal to 93c per Simpsons share — is not included in the $1.53 share earnings figure.) In the first six months of last year, sales were 15% ahead of the like 1958 period, while net was up 47%.

Simpsons-Sears now operates 37 retail outlets including 14 major department stores. Plans for new stores in 1960 include retail outlets in Medicine Hat, Alta., and Galt, Ont. In addition, operations in St. John's, Nfld., and Trail, B.C., are being expanded.

At recent market price of $33¾, common stock is 53% above UV level ($22), could rise 42% before reaching OV level ($48). Price is 22.1 times 1958 earnings of $1.53 per share. If Simpsons-Sears is included, price is 13.7 times 1958 earnings of $2.46. Yield is 1.78% at indicated annual dividend rate of 60c per share. Price in 1959-60 has ranged between a high of $40, a low of $30⅛.

* * *

STEEL CO. OF CANADA operated at its highest level in history during 1959 to establish a Canadian record for basic steel production.

(Total domestic steel output reached a new high of approximately 5.8 million tons last year, up 34% from 1958.)

Stelco turned out 2,438,000 tons of ingots at its Hamilton works in 1959, about 3% higher than the previous peak in 1956. Including steel ingots purchased for further processing and received from customers for conversions, company rolled the equivalent of 2,695,000 ingot tons, over 12% more than in any previous year.

H. G. Hilton, Stelco chairman, attributes these records to several factors including consistently high demand for basic steel during 1959. Technological improvements such as the use of self-fluxing sinter in production of hot iron and more extensive use of oxygen in open hearth furnaces helped boost production levels to meet demand.

Earnings, too, are expected to be at a record level. Previous high of $5.89 per share was attained in 1955 when fewer shares were outstanding.

Profits in 1958 were seriously affected by the 86-day strike; ingot production shrunk to 1,688,436 tons and net was only $3.79 per share.

On the outlook for 1960, Mr. Hilton says:

"Our order position is good into the second quarter of the year, and on the assumption that Canadians will continue to support Canadian-made products, we should be able to look forward to a good year."

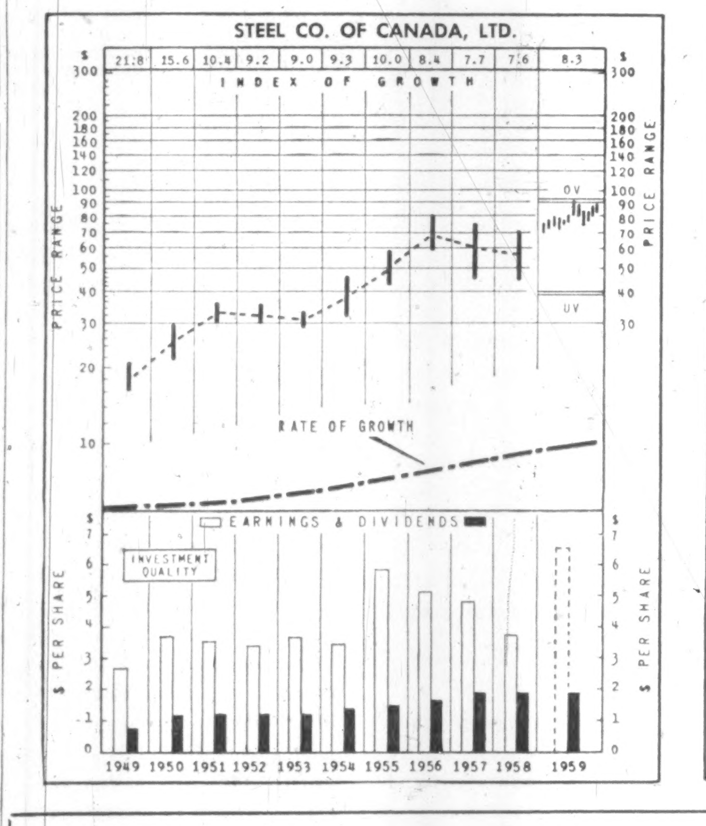
He cautions, however, that there were some weak spots in the sales picture during 1959. These resulted from the flow of imports from low-wage countries in Europe and Asia.

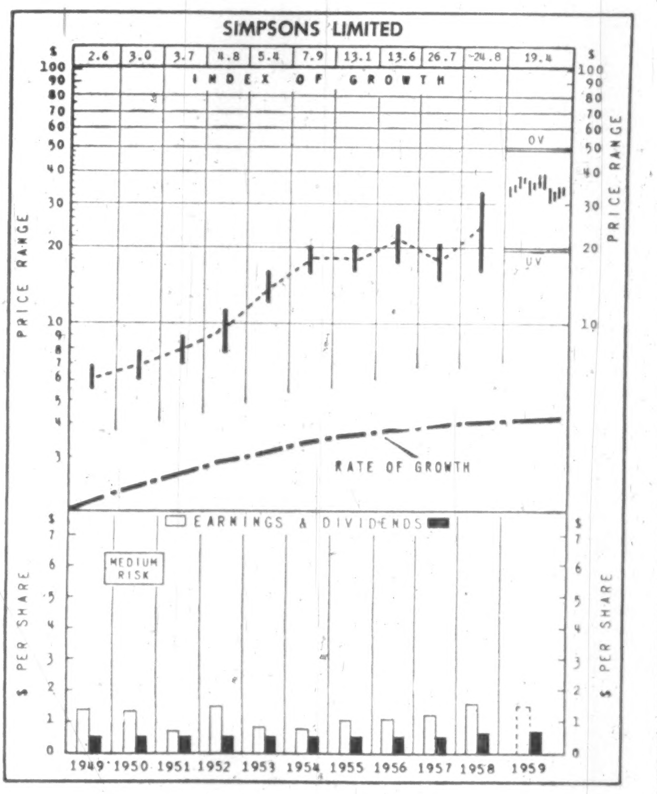
"Reinforcing bars and finishing mill products—wire, fence, nails, bolts and so on—seem to be the hardest hit at present," the chairman comments. "The Canadian steel industry is virtually out of the barbed wire business and in parts of Canada the nail business is going the same way."

Company's new continuous buttweld pipe mill is now in operation at Contrecoeur, Que. Mill has a capacity of 100,000 tons a year, will produce quality pipe in the ⅜-in. to 4-in. diameter range.

Camrose Tubes Ltd., Camrose, Alta., (owned jointly by Stelco and **Page-Hersey Tubes**) is scheduled to be ready for production this spring. The mill will be the first in Canada capable of producing steel pipe larger than 36-in. diameter in continuous 40-ft. welded lengths.

At recent market price of $85¾, common stock is 65% above UV level ($52), could rise 19% before reaching OV level ($102). Price is 22.6 times 1958 earnings of $3.79 per share. Yield is 2.22% at indicated annual dividend rate of $1.90 per share. Price in 1959-60 has ranged between a high of $90, a low of $68½.





How to Read Nestor's Special Stock Charts

INDEX OF GROWTH: The rate at which the value of the equity behind the stock is doubling as determined by the growth rate at which it entered the year. A figure of 5.6 for the present year would indicate that at its current growth rate the equity value is doubling every 5.6 years.

PRICE RANGE: The annual high, low and mean price. Monthly ranges for the current year.

UNDERVALUATION AND OVERVALUATION PRICE LEVELS: Shown by the narrow horizontal lines above and below the stock's price range indicating price at which the particular stock is adjudged as underestimating or overestimating its future rate of growth. A stock showing a fast growth rate will sometimes anticipate growth by two or three years. In this case it may not be so attractive a purchase relatively as some other fast-growing stock that is not anticipating its growth beyond the immediate present. Other factors such as rate of growth and investment quality will also enter into the comparison an investor will want to make.

Without these UV or OV levels a current quotation of, say, 55 or 75 would carry no significance regarding long-range value. The UV/OV levels also permit judgment as between one stock and another. They are not designated points of purchase or sale nor do they attempt to show what will be a stock's bottom or top figures in any given year.

RATE OF GROWTH: The rate as based on Nestor's tests at which the company is showing underlying or long-term growth. This will determine the price trend of the company's common stock over a period of years and in most instances the trend of dividend payments.

**Background and principles behind the selection by Nestor were discussed in a special article in FP, Jan. 10, 1953. A limited number of reprints are available on request.*

Aviation Poses Some Big Queries For Parliament

Airports, competition, routes will probably be important issues at this session . . .

MONTREAL (Staff) — Still unanswered, multi-million dollar questions about aviation seem sure to be important issues this session of Parliament.

The industry — both makers and operators — is waiting anxiously for answers to critical questions.

Most important:

- **Does the government plan** to expand its program of competition between airlines inside Canada? If so, when?
- **Are the RCAF's** "doddering" 500 mph CF-100s going to be replaced? If so, will Canadians build the new planes?
- **Is there going to be** a new "crash program" to improve our air terminals across the country now that the jet transports are almost here?
- **Has the much discussed plan** to buy a large force of new military helicopters been shelved?
- **When will subcontracts** start going out to secondary industry to build parts of the 200 CF-104 Starfighters ordered for the RCAF?

These are all potentially hot political issues and opposition members have used the long holiday to bone up on the details.

At least three of Canada's second-line airlines have informed the Air Transport Board that they want to get more work.

Wheeler Airlines and **Quebecair** both want to link Montreal and Toronto via a number of stops along the "Seaway Route". Wheeler wants to extend the service beyond Toronto to Buffalo and the Niagara peninsula.

On the west coast **Pacific Western Airlines** has filed an application to take over the Vancouver-Victoria-Seattle triangle from **Trans-Canada Airlines.** At one point, **TCA** seemed willing to hand it over, but this week a TCA spokesman told **FP** that it planned to intervene to oppose the application.

Recently Transport Minister Hees announced greater freedom for virtually all non-scheduled operators. Now the secondary scheduled carriers want to know what sort of future they have.

The replacement of CF-100s is considered crucially important both by U. S. and Canadian defence officials. A good plane in its day, the CF-100 today could hardly be expected to play any significant defence role.

Rumors from Ottawa suggest that Canada may buy about 100 of the 1,200 mph, **McDonnell** F-101B interceptors from the U.S. "off the shelf" at **a** bargain rate. If that turns out to be true it promises to bring up the painful question: Should the home-grown **Avro** Arrow have been scrapped after all?

Another possible solution could be to design a version of the CF-104 Starfighter to handle long-range interception work. That might be built in Canada. But it would cost a lot of money.

Whatever plane is finally selected — if any — the Canadian industry wants to learn how much of it can be built in Canada under defence production sharing with the U.S.

Canada's sluggish air terminal program seems set to make political fireworks. Local members of Parliament from almost all main traffic centres are under growing pressure to get something concrete out of Department of Transport.

So far Hees has stuck to the line that everything is under control. But airmen doubt this would stand up to a full-scale opposition attack.

The one big snag faced by the Liberals: During their term of office they didn't do much to lay the important basic plans that would have produced the terminals in time for the inevitable passenger traffic jams that will follow the introduction of 130-seat jets this spring.

All three services have long been waiting to get fleets of new helicopters — and planemakers are sitting on Ottawa's doorstep with various plans to build them. One maker — **Vertol Aircraft Corp.**—has announced that it is willing to set up a factory in Canada to do the job (**FP**, Nov. 14, 1959).

Another, **Sikorsky Aircraft Co.,** is ready to subcontract heavily in Canada both for any Canadian orders and U.S. orders — if it gets the nod (**FP**, Jan. 9).

Bristol Aero Industries Ltd., too, hopes to get part of the work — for its Winnipeg factory.

So far the government has made no public statement that it has any buying plans at all.

ANNOUNCEMENT

J. L. WINGFELDER

J. H. Kent Lyons, president Cerametal Industries Limited, Streetsville, Ont., has announced the appointment of Joseph L. Wingfelder as general sales manager. Mr. Wingfelder was formerly national sales manager for industrial products. In his new position he will be in charge of sales for the company's line of products including Cerametal panels for architectural applications, Porcelate Chalkboard, and V-Corr for industrial applications.

Company Report

CENTRAL CANADA INVESTMENTS LTD., Toronto, total net income for year ended Sept. 30, 1959 amounted to $9,852,057 including profit on disposal of investments of $9,449,427. Net profit for the year ended Sept. 30, 1958, totaled $394,603.

All of the company's holdings of **Canada Life Asurance Co.** shares were sold back to that company in the course of its mutualization. Holdings of **Western Assurance Co.** and **British American Assurance Co.** were also disposed of.

Proceeds were used in part to retire the first and second preference shares. The second preference shares had been issued as a stock dividend to common shareholders on the basis of 35-for-1 to holders of record June 15, 1959.

At the annual and general meeting held Jan. 11, the shareholders ratified a proposal to surrender the company's charter and distribute its assets.

Holdings of 60,000 shares of **National Trust Co.** will be distributed rateably among shareholders. Fractional shares together with any remaining liquid assets will be distributed in cash.

B.C. Tree Farm Starts a Storm

From Our Own Correspondent

VANCOUVER—Award of British Columbia's latest Tree Farm Licence has touched off a storm of protest on the West Coast.

Empire Mills Ltd. was granted the TFL by the B.C. government after a one-man royal commission recommended the area in question — 385,000 timber-rich acres in the Squamish area, north of Vancouver — be designated as a TFL, rather than a public working circle.

The TFL entails private operation of a forest area by a company over a long term.

The PWC involves public management, in that the government's forest service operates a forest area by auctioning off lots of timber to logging companies.

Empire Mills had applied for a TFL (formerly known as Forest Management Licence) over the opposition of a number of other companies, including the big **MacMillan & Bloedel** (now merged with **Powell River Co.**).

The opponents wanted a PWC created in the region which contains one of the last uncommitted stands of big Douglas Fir on the West Coast.

Empire Mills will move a plywood plant from New Westminster to Squamish and establish a $3 million plywood and sawmill operation there.

The award was met by charges of "give-away" and "a mockery of justice."

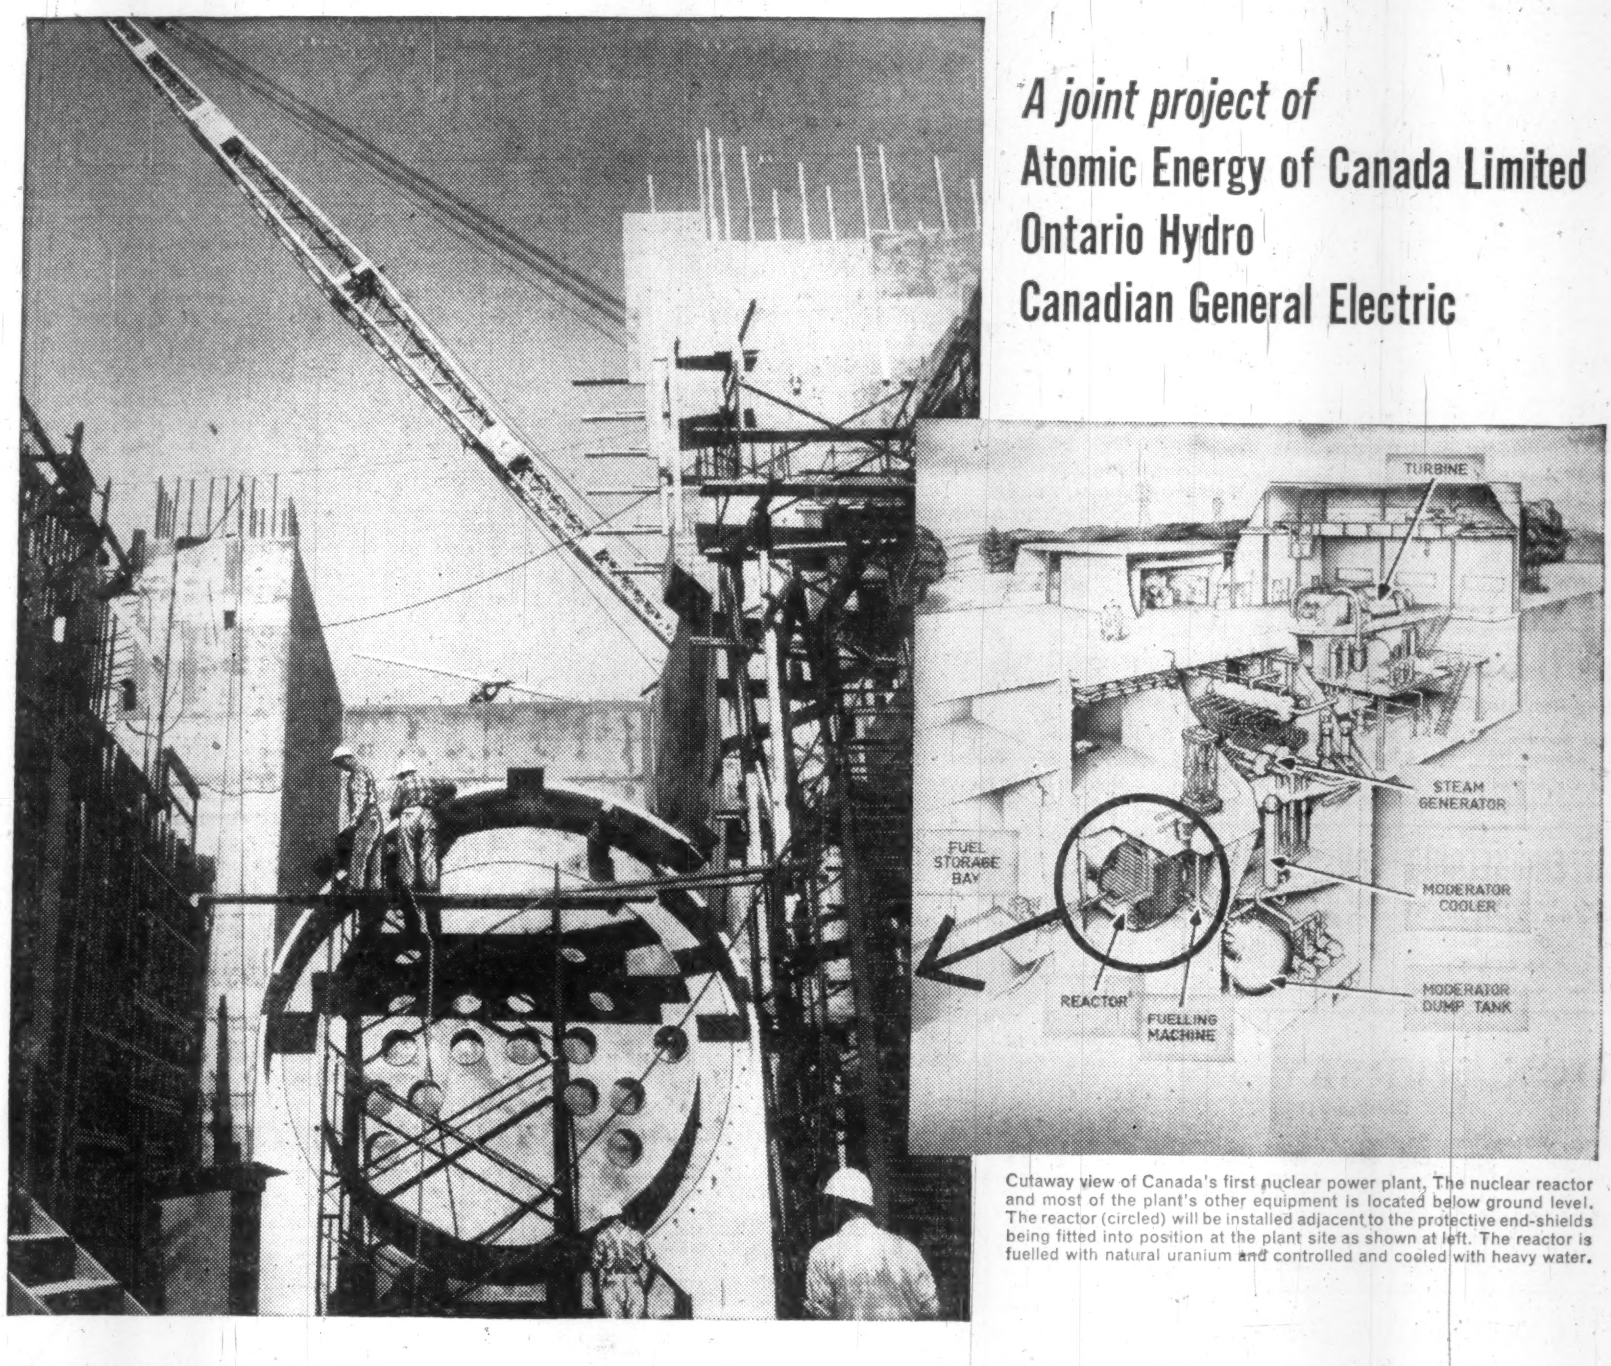
Other opponents of the TFL were Truck Loggers' Association and Western Forest Management Association.

DRIVING COURSE

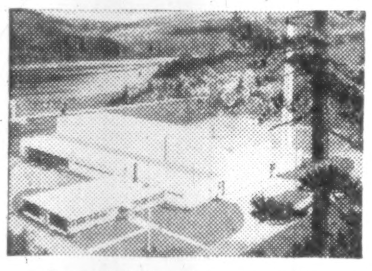
Third annual commercial vehicle-driver-trainer course will be held April 25 to 29, it is announced by the Ontario Safety League. The course is designed for instruction of those responsible for training of drivers of commercial fleets.

CANADA'S FIRST NUCLEAR POWER PLANT WILL PRODUCE ELECTRICITY EARLY NEXT YEAR

A joint project of
Atomic Energy of Canada Limited
Ontario Hydro
Canadian General Electric



Cutaway view of Canada's first nuclear power plant. The nuclear reactor and most of the plant's other equipment is located below ground level. The reactor (circled) will be installed adjacent to the protective end-shields being fitted into position at the plant site as shown at left. The reactor is fuelled with natural uranium and controlled and cooled with heavy water.



Canada's first nuclear power station as it will appear when completed.

Early next year, a giant step will have been completed in this country's progress toward the production of economic electric power from nuclear sources. Canada's first nuclear power station—called Nuclear Power Demonstration (NPD)—is under construction on the Ottawa River a short distance from the world-renowned nuclear research centre at Chalk River.

While NPD will develop 20,000 kilowatts of electricity for Ontario Hydro, its most important product will be the knowledge gained from the actual design, construction and operation of the reactor and associated equipment.

Skilled Nuclear Engineering Team

NPD will be a prototype on which to base the design of the much larger nuclear-electric generating stations of the future. Its reactor—shortly to be installed—will produce heat to create steam to drive a turbine generator and thus produce electricity.

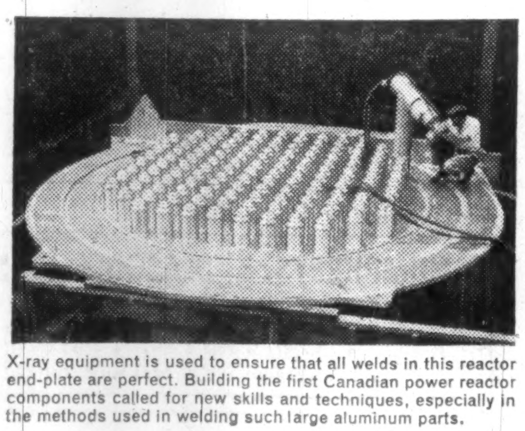
Canadian General Electric is the industrial member of the three-party team whose job it is to bring NPD into operation. The Company's Civilian Atomic Power Department is responsible for the engineering design and development work for the project, and the construction, installation and testing of all the equipment in the plant. The Department, located at Peterborough, now numbers over 250 persons—including outstanding physicists, engineers and other specialists. This group forms Canada's foremost industrial team in the nuclear power field.

Full Company Resources Back Up Nuclear Program

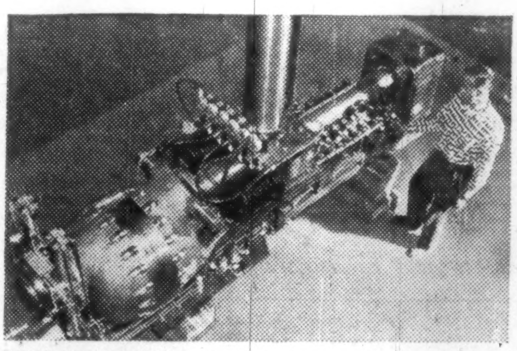
Supporting this pioneering work are the many specialized facilities installed by the Company for nuclear power development, including electronic computers, complex laboratory facilities and extensive experimental test equipment.

These human and material resources are supported by the Company's many skills and facilities gained through more than 65 years of experience in engineering and building the many products used to generate, transmit and use electric power.

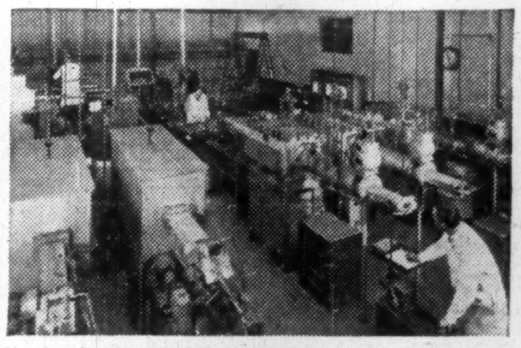
NPD is the forerunner of a new type of power station that will put to useful work Canada's abundant supplies of uranium. Canadian General Electric has marshalled skilled personnel and specialized facilities for this new field of endeavour and is now equipped to participate fully in the Canadian program of putting the atom to work for peaceful purposes.



X-ray equipment is used to ensure that all welds in this reactor end-plate are perfect. Building the first Canadian power reactor components called for new skills and techniques, especially in the methods used in welding such large aluminum parts.



This fuelling machine for the NPD reactor is shown under test at Peterborough Works. Two of these specially designed machines will be installed in NPD. They will be remotely controlled to both load and unload fuel elements while the reactor is operating.



Uranium fuel for Canada's first nuclear power station is shown being processed in furnaces at the Company's Carboloy Works in Toronto. New methods of fuel manufacture have been developed to produce the uranium oxide pellets for use in NPD.

Progress Is Our Most Important Product

CANADIAN GENERAL ELECTRIC COMPANY
LIMITED

ANNOUNCEMENT

J. P. LEANEY

Establishment of a public relations department for Canada Safeway's company-wide operations was announced recently by Walter J. Kraft, Vancouver Division Manager and Chairman of the Board.

J. P. (Jack) Leaney has been named Manager of Public and Industrial Relations for Canada, counselling Canada Safeway's four retail divisions which operate 195 retail stores in the five western Provinces.

"The purpose of this management shift is to provide closer coordination between our division operations in matters of good community and industrial relations," Mr. Kraft explained. "This new appointment provides a channel for handling company-wide public relations. Community relations will continue to be handled independently in each Division."

Assisting Mr. Leaney will be V. L. (Vic) Pinchin who recently was named Branch Manager of Industrial Relations for the Winnipeg and Saskatchewan Divisions of Canada Safeway. He will also assist in public and personnel relations matters in the Winnipeg Division. Mr. Pinchin will establish his branch office at Winnipeg. He is a native of Vancouver and is a University of British Columbia graduate.

Mr. Leaney is a native of Edmonton. He has over twenty-two years executive experience with Canada Safeway in industrial relations, personnel, advertising and public relations. Prior to joining Safeway, Mr. Leaney was employed in the advertising department of the Winnipeg Tribune. His office headquarters will continue to be located at Vancouver.

Canada Dickering For a Submarine?

U.S. reports say we may buy, borrow or build a submarine for West Coast defence training . . .

From Our Own Correspondent

WASHINGTON — Canada may get a badly-needed submarine for use off the British Columbia coast.

At present, while Canada has anti-submarine warfare units of the RCN and RCAF stationed on the West Coast, there is no Canadian submarine there on which ASW units can train. Currently, the Canadian units must rely entirely on the U. S. Navy to provide training exercises.

Word from the U. S. Navy on the West Coast and from the Pentagon indicates Ottawa is seriously considering buying or borrowing a submarine from the U. S. or possibly from the U. K.

Pentagon sources say Canada has enquired about costs and types of U. S. submarines available.

Sources on the Canadian West Coast say there is a third possibility that Canada might build her own submarine.

The $25-million price tag, however, might well be a little high, especially when Finance Minister Fleming is trying to hold down defence spending.

The cost of a refit for a borrowed U. S. or U. K. sub would be around $1 million.

If Canada did borrow a submarine from the U. S., Congressional officials say it would have to be given the approval of Congress before the deal could go through.

At present, Canada has three submarines operating out of Halifax for the purpose of training anti-submarine warfare units on the Canadian East Coast.

These subs are rented from the Royal Navy and Canada pays for the upkeep, provides the crews and has provided several submarine crews to the Royal Navy.

It is understood in Ottawa that the Canadian government still is considering the whole project and it may not yet have reached cabinet level.

If the cabinet approves approaching U. S. for a submarine, negotiations would have to be held with the State Department and U. S. Navy before the matter went to Congress for its blessing.

There has been growing emphasis placed by North American military officials in recent months on strengthening anti-submarine warfare capability.

U. S. officials have repeatedly pointed out that missile firing nuclear submarines operated by the Russians could be far more dangerous to North America than ICBM's.

They thus feel it is absolutely necessary to strengthen ASW techniques both in Canada and the U. S. This means more money and more training.

If Canada does get a submarine for the West Coast from the U. S. or U. K., it is understood it would be an operational submarine, not just a training ship.

An operational sub would provide more formidable exercises to anti-sub defences than would a training ship.

The three RN submarines, which Canada now operates out of Halifax as the Sixth Flotilla, were acquired in the mid-1950s and comprise the first real submarine force Canada has had since World War I.

Just after World War II, the RCN did some training in a captured German sub.

In World War I, Canada had two submarines stationed on the west coast, but these were given up in the early 1920s. **They were purchased in Seattle and, according to some reports, never had any torpedoes,** although this was not generally known at the time.

GREEN ADDS STORE

A. L. Green Ltd. department stores has added a store at Jonquiere, Que. to its chain, which now has 13 outlets. The others are at Montreal, Joliette, Trois Rivieres, Quebec City, Jonquiere, Chicoutimi, Sherbrooke, Alma, Ottawa and Sudbury. The chain handles clothing and house furnishings.

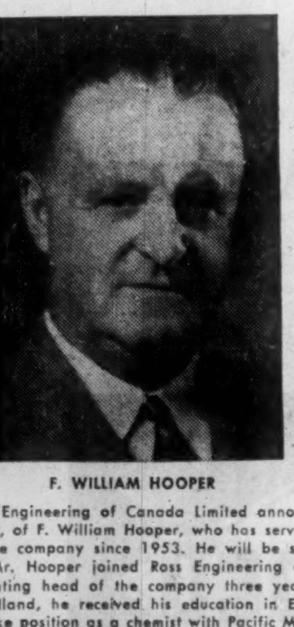
ANNOUNCEMENT

ROSS ENGINEERING OF CANADA LIMITED



F. WILLIAM HOOPER

RALPH R. WILLIS, P.Eng.

Ross Engineering of Canada Limited announces the retirement, effective January 1, 1960, of F. William Hooper, who has served as Vice-President and general manager of the company since 1953. He will be succeeded by Ralph R. Willis.

Mr. Hooper joined Ross Engineering as a salesman in 1932 and was named operating head of the company three years later. A native of York Harbor, Newfoundland, he received his education in England and returned to Canada in 1919 to take position as a chemist with Pacific Mills Ltd., a subsidiary of Crown Williamette Corp. He served that company for thirteen years before joining Ross Engineering. Mr. Hooper will remain with the company as a director and will act in a consulting capacity. He is a member of the Technical Associations of the Pulp and Paper Industries of both Canada and United States.

Mr. Willis joined the company in 1936 as a draftsman, became chief engineer in 1945, assistant general manager in 1955, vice president in 1959 and vice president and general manager in 1960. He is a graduate of civil engineering of the University of New Brunswick and is a member of the Corporation of Professional Engineers of the Province of Quebec and of the Engineering Institute of Canada. He served overseas with the Royal Canadian Engineers in World War II.

Ross Engineering are designers and fabricators of heating and ventilating systems, specializing in the pulp and paper industry — drying, baking and curing ovens for industry and general trade.

Sales offices in Vancouver, Port Arthur, Toronto, Montreal and Fredericton.

Short Position Down on TSE

Short position on the Toronto Stock Exchange declined to 1,341,652 shares of 188 issues on Dec. 31, compared with 1,414,199 shares of 208 issues on Dec. 15.

Crush Sales Up Plans Expansion

Sales of **Crush International Ltd.** in the current fiscal year are well ahead of the comparable period last year, President J. M. Thompson told the annual meeting.

Development of new Crush flavors in several test markets (**FP**, Dec. 19, 1959) has proved successful. Many new territories in the U. S. are scheduled for franchised bottling plants this year.

Plans are under way to construct a new $1 million bottling plant next to the Kik Cola plant in Montreal. It will also provide new quarters for Orange Crush and Gurd's and should be in operation by next fall. A new plant is also planned for Vancouver, but this may not materialize until next year.

The Kik operation in Montreal represents the largest quart cola sales in Canada, the president said. Sales of this product last year rose by 17% and company hopes to double present volume in the next five years.

Shareholders approved a proposal to increase authorized capital by the creation of 100,000 preference shares, $100 par. The number of directors was increased from eight to 12.

NATIONAL CANADIAN BANK

85th ANNUAL GENERAL MEETING

The 85th Annual General Meeting of the shareholders of National Canadian Bank was held at the head office of the bank, in Montreal, on Tuesday, January 12. Mr. Charles St-Pierre, president, who acted as chairman, addressed the meeting as follows:

Our first objective should be to accelerate capital formation

The development of a country should proceed by stages, each forward movement being followed by a period of consolidation

The past year has been a period of business recovery. The renewal of activity, having reached a high level in April, remained steady throughout the summer months and gradually quickened its pace as autumn approached. There seems to be no doubt, therefore, that statistics for the full year will show that the gross value of national production, the most significant of all economic indicators, reached a new peak in 1959.

OUTLINE OF ECONOMIC CONDITIONS

Agriculture has not had a satisfactory year throughout the country. Poor harvesting weather caused serious damage to field crops in the Prairie Provinces. The wheat crop was below the ten-year average and the production of rye was as drastically reduced as in the previous year. On the other hand, the production of oats and barley was slightly above the average. While excessive heat prevailed in certain parts of Ontario, temperature in the Province of Quebec and the Maritime Provinces was mostly favorable. The anticipated decrease in sales of agricultural produce should be offset by higher returns from stock-farming the products of which have found ready outlets both in Canada and abroad. It is therefore anticipated that farm income will show an increase of about 5 per cent over 1958. Mechanization of agriculture is progressing. Farm implement sales in the first nine months of the year under review increased by 23 per cent, gains being recorded in all provinces, except the Maritimes.

Industrial production reached a new high in September. There was a noticeable extension in woodcutting operations. The output of mines, despite a reduction in the extraction of gold, zinc and coal was at a record figure last September. The production of electricity is steadily increasing. Canada's steel mills, stimulated by the strike in the United States, have operated at a much higher capacity. The building trades were very active, although house-building had slowed down. The total of construction contract awards for the first ten months of the year exceeded $2.7 billion. While this figure was almost 9 per cent less than the total for the same months of 1958, it had been exceeded only twice during a like period. The latest statistics available disclose increases in many industries, more particularly pulp and paper, chemicals, automobiles, boots and shoes, flour milling, sugar refining and most foodstuffs industries.

This upsurge of activity had a favorable influence on trade, transportation, employment and personal income. Wholesale sales for the first nine months of the year increased by 10 per cent, as compared with 1958, and retail sales, by 5.3 per cent. Railway, trucking and navigation companies profited by the speeding up of merchandise distribution. Although some 100,000 workers were added to the labor force, unemployment is far from being as serious as a year ago. More persons are employed today than ever before. Labor income having risen almost without interruption during the recession exceeded $13,190,000, for the first nine months of the year. This figure, when compared with the same period of 1958, represents a gain of 7.9 per cent which was fairly well distributed across Canada. There is good reason to suppose that almost all other revenues were also higher than those of the previous year. Government transfer payments and various subsidies were higher too. All this resulted in an important increase in disposable personal income.

Did the scarcity of money slow down the momentum of the business revival which was stimulated by so many favorable factors? Many would like to know the answer to this as the causes and effects of the monetary tension are being freely discussed. The comparative scarcity of money with the accompanying high interest rates results from a series of facts that are worth recalling.

The Canadian economy passed from recession in 1957-58 to recovery in 1958-59. Between the end of July, 1957, and the beginning of October, 1958, the money supply rose by $1,843 million and it remained fairly steady thereafter. The Bank of Canada had increased the supply of money in order to help finance the government deficits incurred during the recession and the carrying of the conversion loan of 1958.

From July 31, 1957, to September 30, 1958, the demand for commercial loans having slowed down, the chartered banks increased their holdings of Government of Canada securities by $1,380 million. However, recovery having begun earlier than was generally expected, the amount of credit extended by the banks to their customers during the twelve months ending September 30, 1959, rose by $1,390 million. In order to cope with this renewal of activity, as the Bank of Canada would not allow further monetary expansion lest it should aggravate inflationary tendencies, the banks had no alternative but to reduce their holdings of Government of Canada securities by $1,065 million. Under such circumstances, the banks were compelled to adopt restrictive lending policies.

In the allocation of their available resources between the various categories of customers, the chartered banks gave special consideration to the small borrower, as witnessed by the following figures issued by the Canadian Bankers' Association. The total amount of loans to individuals outstanding on September 30, 1959, was $1,153 million, as compared with $859 million a year earlier, an increase of 34.31 per cent.

OUR FOREIGN RELATIONS

A survey of the Canadian economy must take into account two special features which render our country very susceptible to outside influences. These are the excessive disproportion of production to consumption and the huge share of foreign capital in the development of our natural resources as contrasted with our own.

The external trade of Canada is keeping at a high level. Exports for the first ten months of the past year, showing an increase of 3 per cent over the same months of 1958, were at $4,193,800,000 a record figure. But imports, having risen by 9.4 per cent, amounted to $4,717,100,000. Thus the adverse trade balance reached $523.3 million, more than twice the deficit for the comparable period of the previous year.

The development of our exports resulted mainly from increases in our sales of forest products and minerals, such as iron ore, uranium, lumber and woodpulp, as well as agricultural implements and other machinery. We also increased our shipments of wheat, newsprint, copper and zinc. On the other hand, there was a reduction in our sales of flour, nickel, aluminium, petroleum and, particularly, aircraft, the previous year's orders for military planes being non-recurrent.

It is sometimes asserted that the growth of our imports is due to the expansion of the Canadian economy which requires machinery and equipment we must buy abroad. This is only a partial explanation since, during periods of recession, our external trade still shows an adverse balance although our exports remain steady. In fact, we purchase at all times a big volume of foreign-made consumers' goods our country produces or could produce. Canada is, unfortunately, the largest importer of manufactured articles per capita in the world.

The trend of Canada's external trade is undergoing changes that claim our attention. A comparison between the first three quarters of 1958 and of 1959 brings out the fact that our imports from all sources have risen while our exports to almost every country, except the United States and Japan, have shrunk. There were declines of 4 per cent as to Latin America, of 7.6 per cent as regards the Commonwealth and of more than 21 per cent on the markets of Western Europe. Canada carries on the bulk of its trade with the United States which supplied 68.5 per cent of its imports and took 62.3 per cent of its exports.

The gain in exports resulted to a very great extent from the increase in our sales to the United States and, inversely, Canada was the only country where United States exports showed a substantial advance. While the two high-cost economies succeeded in developing their trade with each other, both experienced difficulties in the other parts of the world. This fact is significant of the changing trend of international trade.

The world economy is shifting rapidly. The post-war period, which was an era of scarcity, is at an end.

In Canada as well as in other countries, the production of raw materials had been developed in anticipation of shortages which did not prove so serious as they were expected to be. The demand for primary products is not increasing as fast as heretofore due to a greater use of synthetic products and the former represent a gradually declining proportion of international trade. Our exports to Western Europe are shrinking despite the great industrial activity that has been prevailing in this region for a year or more. The reserves of raw materials in the United States and in Britain were a price sustaining factor while they were being accumulated at the end of the war, but they have become a threat to producers.

Many nations of Western Europe are now producing a great number of things for which they provided important outlets at the end of the war. The modernization of their equipment and of their technique enables several of them not only to meet the requirements of the home market, but also to compete with their former suppliers on every market, including their own.

The Common Market is strengthening and stimulating the economies of the six member nations. It brings about agreements and amalgamations and the organization of industrial corporations. In order to protect their interests on this huge market, United States companies are opening a greater number of subsidiaries than ever and English firms are following suit. Many Common Market countries are granting them special privileges so as to attract foreign investments. These subsidiaries, thanks to lower production costs, will be in a position to export to other parts of the world.

The European Free Trade Association, which was established recently under the leadership of Britain and includes Austria, Sweden, Norway, Denmark, Portugal and Switzerland, brought about a split that will probably be attended by unfortunate consequences. There is very little prospect of an early amalgamation of the two groups involved in a struggle by which neither the one nor the other will likely benefit and which may further obstruct our access to West European markets.

We will have to withstand growing competition from nations that are resuming their positions in international trade and even from new-comers. Japan, with a diversified production and very low costs, is increasing its sales by leaps and bounds on every large market. Russia and its satellites are intensifying their economic offensive by which Canada is all the more liable to be affected because they are offering products that are very important components of our own export trade, such as wheat and other grains, forest products and base metals. In many lands, underdeveloped countries are seeking in industrialization a means of improving their lot and they have at their disposal a very large and cheap labor force. The United States, whose international payments show a deficit exceeding $4 billion, are endeavouring to increase their exports through various means, for instance by requiring that almost every credit granted to nations seeking aid should be tied to the purchase of United States goods. Under such circumstances, Washington is not likely to consider the removal of import quotas intended to protect domestic farm and mining interests. Quite the contrary, it is anticipated that competition from the United States will be keener than ever as regards agricultural products, such as wheat, oats and barley, of which there is a huge surplus.

On the other hand, the great economic activity that prevails in almost every nation of Western Europe has improved the standard of living of the populations. The freeing of trade has made great strides during the past year. Many countries, having restored their dollar reserves, are reestablishing the convertibility of their currencies and abolishing or gradually relaxing import bars against various products from Canada or the United States.

To what extent will Canadian exporters take advantage of these favorable conditions?

The industrial equipment and the capacity of production of the Canadian economy have been considerably developed since World War II. This is all to the good, but we must sell, and sell abroad as the home market is somewhat restricted. Therefore, the growth of our export trade and hence the well-being of the nation depends above all on a question of costs. As the federal Minister of Trade and Commerce said recently: "Unless we can continue to develop our sales in world markets, our relatively high standard of living must inevitably fall . . . This can only be achieved by providing our customers with goods they want at prices they are willing to pay."

FOREIGN CAPITAL

The condition of our financial relations with other countries is bound sooner or later to create serious difficulties.

Our international accounts for 1958 show a deficit of $1,085 million. This deficit results from various features, such as an unfavorable balance in merchandise and tourist accounts, the payment abroad of dividends, interests, transportation costs and insurance premiums, and remittances of foreign-controlled subsidiaries to home offices. But it arises to a great extent from Canada's ever-growing indebtedness to other countries which worsens the situation from year to year.

A report issued recently by the Dominion Bureau of Statistics discloses that Canada's indebtedness abroad, having increased by $1.6 billion in 1958, stood at $13.5 billion at the end of the year. The growth in the net indebtedness since 1954 is almost as great as the entire net indebtedness from the beginning of the economic history of Canada up to that time.

Interests and dividends paid to non-residents in 1958 totalled $586 million. After deducting receipts from Canadian investments abroad, net payments amounted to $420 million. However, an increase may be expected in this item since many undertakings financed by foreign capital have not yet reached the stage of production.

The inflow of foreign capital, though some 10 per cent lower than the previous year, was still sufficient to finance the deficit in 1958. Even if it has been large enough to offset the deficit for 1959, to which the trade balance had already added half a billion dollars at the end of October, the fact remains that a country, no more than an individual, cannot live indefinitely by borrowing. Moreover, it is worthy of note that a large part of the recent inflow of capital was attracted by Canada's higher interest rates. As demand for capital is rapidly rising in Western Europe, we may have to face, some day, heavy withdrawals which would be apt to upset the precarious balance of our international accounts.

The inflow of capital and the non-residents' earnings retained in Canada in 1958 added 9 per cent to foreign long-term investments, the amount of which has gained $6.6 billion since 1954. They now aggregate $19.1 billion, more than twice the total for 1951. The United States, obviously our principal source of capital, make up some 77 per cent of all non-resident investments in Canada, or $14.6 billion. During these last few years, investments from other sources have also shown a sharp rise, particularly those from the United Kingdom, which amount to $3,100 million, and even those from mostly all other countries, which total $1,400 million.

CAPITAL FORMATION

If Canada is to remain master of its own destiny, its most important and most urgent objective should be to accelerate capital formation in order to increase Canadian investments in the development of the natural resources and of the industrial equipment of our country.

There has been a marked improvement in capital formation during the last few years. Personal savings have averaged about 6 per cent of personal income after taxes. But this result, substantial though it may appear, is far from being adequate.

Too large a proportion of our financial resources is paradoxically exported, Canadian long-term investments abroad amounting to $5 billion, while another very important proportion is invested in government securities. Holdings of federal government bonds by the public exceed $10 billion dollars, to say nothing of other billions in provincial and municipal securities.

The huge sums of money raised by governments and excessive taxation divert considerable financial resources from production purposes and thus hamper capital formation. The federal government alone absorbs about 17 per cent of total national output by taxing away about one half of the Canadian companies' earnings and too large a proportion of personal income.

Public expenditures, provincial and municipal as well as federal, take an ever-increasing proportion of public savings, the very source of capital. Expenditures by the provincial governments for the fiscal year 1959-1960 are estimated at $2,562 million and their revenues at $2,292 million, which would leave a deficit of $270 million, before any provision for amortization of debts. During these last five years, provincial governments' expenses rose by 85 per cent and their revenues by about 62 per cent.

It is obvious that Canada can gradually free itself from foreign control only through a methodical practice of economy in every domain. It behooves the powers that be to set the example. So there must have been general satisfaction to learn that the federal government contemplates the appointment of a commission that would conduct an inquiry into the administration of the various ministries and departments with a view to bringing about a reduction in expenses. Would it not be expedient to have similar commissions appointed in each province and in larger cities? The establishment of effective methods of management and control is all the more necessary today as the development of the country entails, at every level, ever-increasing expenses.

OUTLOOK

Everybody is wondering what 1960 has in store for our country.

The new year opens up encouraging prospects. Industrial production will doubtless continue to expand. Large public works in progress and steady private investments will help sustain economic activity. While some industries are momentarily overdeveloped, others are planning to enlarge their plants or modernize their equipment. There seems to be no doubt that employment and national income will reach new peaks.

Nonetheless we shall be faced with serious problems, more particularly the reestablishment of our international accounts on safer bases, the formation through increased savings of the capital required to achieve a higher degree of economic independence and the stabilization of the dollar which is essential to the progress of our export trade.

In Canada as well as in the United States and in many countries of Western Europe, the aim is to reconcile economic progress with currency stability, even if a slowing down of the rate of growth should result. Creeping inflation prevails almost everywhere. As the managing director of the International Monetary Fund rightly said, inflation is not over, it is merely being contained. The increase in the cost of living in Canada, while not very great during the past year, has nevertheless been steady for many months. And a rise in prices is all the more detrimental to our country because it restrains exports and encourages imports, which can only aggravate the lack of balance of our international trade and accounts.

It goes without saying that the immense reserves of natural wealth and all the other advantages Canada enjoys give promise of a brilliant future. But endeavouring to attain a record-breaking rate of growth year after year would be an unreasonable ambition. The economic development of a country must rest on sound ground and proceed by stages, each forward movement being followed by a period of consolidation. If measures adopted with a view to stabilize currency to the greatest extent possible should slacken the pace momentarily, they ensure steady and lasting progress.

FURTHER PROGRESS OF THE BANK

Assets, loans and profits at all-time high

Mr. Ulric Roberge, vice-president and general manager, presented a report on the results of the past year's operations and on the condition of the Bank.

Profits, having increased by $488,875 over the previous year, amount to $5,492,709. After provision of $2,080,000 for taxes, against $1,995,000 in 1958, and of $776,995 for depreciation on bank premises, net profits add up to $2,635,714, an increase of 16.21 per cent over the preceding year. Following an issue of 300,000 shares, per share earnings based on the average number of shares outstanding during the year were $3.02, against $3.24 in 1958.

The continued growth of the Bank's assets required an increase of its capital stock. As you know, on March 26, 1959, the Bank offered shares to its shareholders at $40.00 each, on a basis of three new shares for seven shares held. On the expiration of the subscription warrants, June 25, 1959, there remained 8,522 unsubscribed shares, including 1830 shares made up of fractions of share the issue of which is not permitted under the Bank Act. These shares were sold by the Director of the Bank at a price of $55.20. The net proceeds of these sales, after deducting $40.00 per share, were distributed prorata between the shareholders whose shares had produced these fractions and the shareholders who had not exercised their right to subscribe. When the amount of all the subscriptions is paid, at the end of next March, the capital paid-up will be $10,000,000 and the rest account $32,000,000.

Payments to shareholders, $1.90 per share, including an extra dividend of 35 cents, amounted to $1,656,444, against $1,190,000 in 1958. The balance of undivided profits was $812,371, after transferring $1,000,000 to rest account the amount of which now stands at $31,712,758.

Personal savings deposits totalled $416,033,697, as against $418,022,305. This decrease of some $2,000,000 was due to the importance of the subscription of Government of Canada Savings Bonds by the Bank's clients, which showed a considerable increase as compared with the preceding issue of Savings Bonds. Total deposits aggregate $696,942,053, a record figure.

Total assets, having risen by $14,315,632 during the year reached an all-time high of $743,381,415. Cash assets amounted to $152,861,900 and are equal to 21.87 per cent of liabilities to the public, as compared with $102,107,685 or 14.64 per cent a year ago. Quick assets at $339,105,231 represent 48.51 per cent of liabilities to the public.

Current loans and discounts, showing an increase of $38,677,728, aggregate $368,240,729, a new peak. Mortgages and hypothecs insured under the National Housing Act amount to $24,337,632, compared with $18,871,280 the previous year. In order to meet the credit requirements of industry, trade and agriculture, the Bank has had to allocate to commercial loans a part of its securities the sum of which has been reduced from $255,548,887 to $182,217,010.

During the year, six new branches were opened and four agencies were converted into branches.

Gentlemen, two resolutions will be submitted to this meeting: one is to the effect of increasing the authorized capital of the Bank, the other one has respect to an increase in the number of Directors.

The Directors take pleasure in acknowledging the loyal co-operation of the staff who is the Bank's main asset and to whom great credit is due for his contribution to its progress. The members of the staff, conscious of their responsibilities to the Bank and to its clients alike, endeavoured to serve both in the performance of their duties with commendable willingness and diligence.

Market Comment

What stocks and bonds are doing and what prominent observers say

This week's sharp market tumble in the U. S. dragged Canadian stocks down too, at a time when several groups were starting to inject new buying steam into the market.

Major factors touching off the sharp U. S. decline were believed announcement of Washington's balanced budget plans for next year; indication of further hardening money rates in the U. S., and Secretary of Labor Mitchell's statement that the recent steel-wage settlement terms were non-inflationary.

The U. S. market appeared trying to adjust itself to the prospect of tighter money ahead and probable removal of some inflationary fires from under price structures.

While market experts could see these factors exerting a restraining lid on further sizable market advances at this time, they could not see it producing a change in basic market direction as yet. The current business picture — and for the first half at least — is considered still too buoyant for any such change.

Recent popular Canadian oil and gas and iron ore issues were putting up strong resistance to the downward price trend. Despite the unexpectedly large number of intervenors and the prospect of longer-than-anticipated hearings on the gas export proposals at Ottawa, authorities close to the picture still see outlook for export as favorable.

* * *

G. T. HOWARD; H. C. Flood & Co. (Montreal)

Speculative investors should be able to pick bargains out of the depressed oil and gas group but the more conservative, if they have not already done so, should look into the opportunities in the bond market which is just as depressed.

The average yield on 60 industrial common stocks (T.S.E. December 31) is 3.95%. Good bonds are now available with current yields of 6.75% and more. Even after allowing for the 20% income tax credit on dividends, very few common stock yields can compare favorably.

Tax-conscious investors will find numerous discount bonds to choose from. For example, a C.P.R. 3½% bond due in 1966 yields 6.3% at around 85 but much of this is in capital gain and only the 3½% coupon rate is taxable. C.N.R. 2¾% bonds due in 1963 can be bought to yield 5.50% but only half of this, the 2.75% interest portion, is subject to income tax.

For the man who wants everything the 5½% C.N.R. bond due in 1964 gives a 6% yield. It is convertible into a 1971 maturity so it combines the stability of a short term with the profit potential of a long term.

Canadian stock markets have refused to follow the lead of the New York market into new high levels. There is little to suggest advances in the near future with indications favoring a weaker trend as the year progresses. Selected issues will of course continue to out-perform the averages.

Because of generalizations like the foregoing contributors to this column are sometimes criticized for not being sufficiently specific. Here then are seven stocks which, in the opinion of this writer, should move higher in 1960 if the expected decline in the market as a whole does not develop too strongly:

Canadian Breweries, Trans-Canada Pipelines, Canadian Hydrocarbons, Canadian Husky, Fraser Companies, Ontario Steel Products, Central Del Rio.

* * *

P. M. RICHARDS; J. R. Timmins & Co. (Toronto)

As we see it, there is nothing now in sight that can reasonably be expected to send Canadian industrial stock prices substantially higher, notwithstanding all the year-end assurances that 1960 will be another good year for Canada in respect of general business activity, employment and continued high consumer spending.

Activity doesn't necessarily mean growth, and growth doesn't necessarily mean higher earnings. And the dividend-paying blue chips most favored for growth appear to be quite high enough already, when their yields are only half those available from good bonds.

Despite its mounting industrialization, Canada is still very largely a natural resource development country. Though world demand for these resource products is increasing with the rise in world prosperity, the fact remains that worldwide production of practically every commodity of importance is currently either outrunning demand or threatening to do so.

Furthermore, competition has latterly been increasing sharply in world markets for both manufactured goods and raw materials. **This is not a promising situation for a high-priced economy like Canada's, that happens to depend largely on export trade.**

However, although considerations of relative production costs, proximity to markets, political tie-ins and the exchange value of our dollar do not seem, on balance, to favor our overseas export trade at this time, they do tend to take us closer to the United States, which fortunately is expanding economically at a rate that seems certain to require increased imports of raw and semi-processed materials from Canada.

This high dependence on our neighbor is certainly not desirable but seems likely to sustain us satisfactorily business-wise. Stockmarket-wise the outlook is currently less promising, and investors might do well to take some profits and especially to seek to strengthen the investment quality of their lists.

* * *

FRANK V. KOCLIK; Bache & Co. (Toronto)

The steel strike settlement has helped improve investors' attitudes toward stock markets although some dissatisfaction has been expressed about the terms of the deal. Price increases of steel are expected to come out sooner or later and, no doubt, industries will recognize this possibility.

The accumulation of larger-than-average inventories will eventually take place. This should bring about relatively high capacity operations of steel plants with an improved demand for commodities such as base metals, iron ore and nickel.

In other sectors, a more promising outlook for newsprint and paper products, coupled with a possibly lower premium on the Canadian dollar, should stimulate interest in this industry.

Speculative funds, recently syphoned off by some of the U. S. high flying stocks, may come back to pick up bargains in depressed industries, for instance western oils. Gas issues will continue getting a lot of publicity and prices of gas shares are expected to chart firmer trends.

Generally speaking, business news and corporation reports are likely to provide good reading for shareholders, at least in the first half of 1960. We anticipate that the briefly mentioned industries and others will be in the forefront of activities and their influence will provide a softening effect on possible stock market irregularities.

While various statistical indices may break into new high grounds, we do not expect a broad frontal move; the prices should be carried higher only by selected groups. The more cautious approach to stocks is noticeable and we will not be surprised to see continuous profit taking, especially as new high areas are penetrated.

It is obvious that we are going to have a very selective market and investors are urged to watch their holdings carefully. The appraisal of the second half of 1960 will have to be made in the light of new developments.

Dividend Changes

CONDUITS NATIONAL — Common, 20c plus 20c extra, payable Feb. 1, to holders of record Jan. 18; ex-dividend Jan. 14. This is the first extra declared on the stock. Recent price: $13⅞.

FEDERAL GRAIN—Class A and B common, 35c plus 25c extra payable Feb. 1 to holders of record Jan. 19; ex-dividend Jan. 15. These are the first extras declared on the stocks. Recent price: Class A $48.

INTERNATIONAL UTILITIES — $2 preferred, 45c (U. S. funds), payable March 1 to holders of record Feb. 5. Initial dividend for period Dec. 10, 1959, through Feb. 29, 1960. Recent price: $42.

SHEEP CREEK MINES — Common, 3c payable Feb. 15 to holders of record Feb. 1, ex-dividend Jan. 28. This is the first dividend declared since 5c was paid Nov. 1, 1956. Recent price: $1.

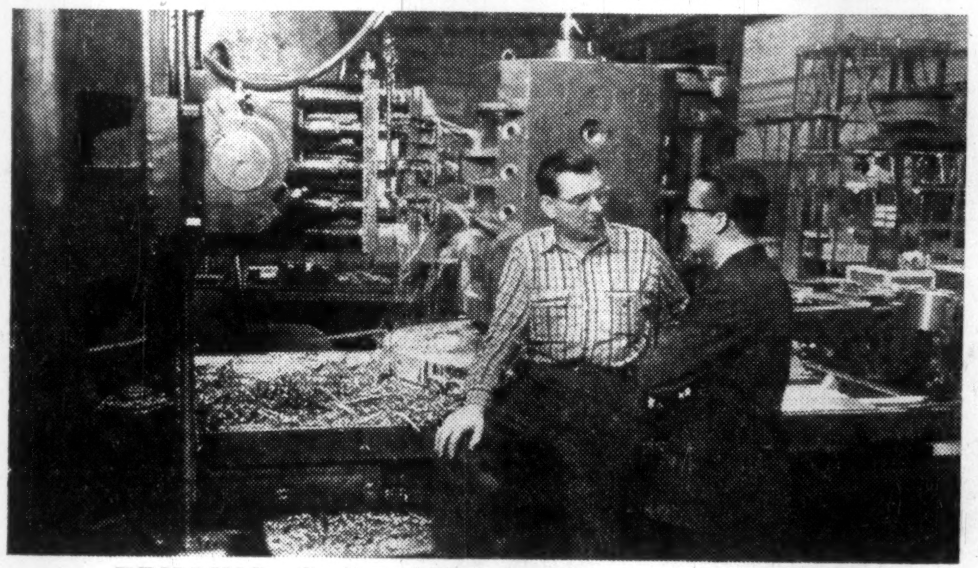
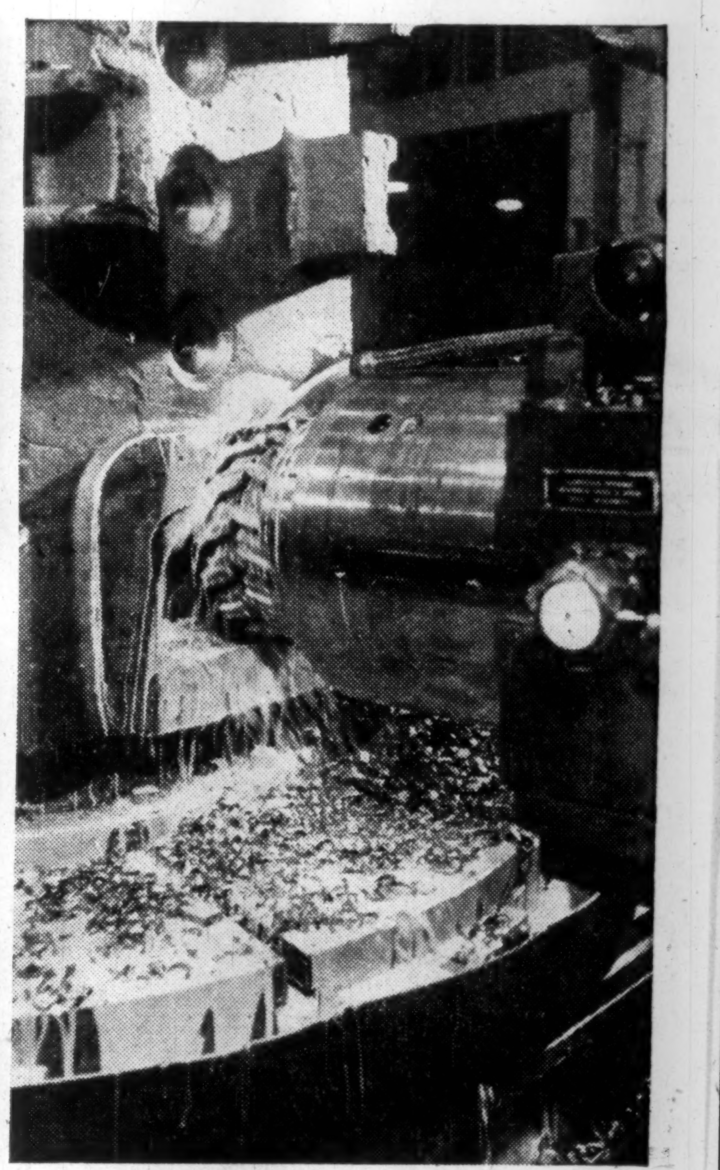
GRINDING—Good detergency—better finishes and rust protection.



DRILLING—Cooling ability—heavier cuts and less tool wear.



MILLING—Emulsion stability—longer life and cleaner machines.

At C.G.E., Peterborough,

S.E.C.O. APPROVED FOR PLANT-WIDE USE ECONOMIZES IN PURCHASING AND PLANT HANDLING

Further proof that Quality is the best economy of all

Sunoco Emulsifying Cutting Oil is used plant wide at Canadian General Electric Company Limited, Peterborough. Various competitive coolants had been used and it was eventually decided to adopt a soluble oil for general use.

"The Man from Sun Oil" recommended S.E.C.O., tests were run and declared a success, and wide use resulted in economy of purchasing and plant handling. Despite continuing tests on competitive products, no substitute has been found to improve on the economy and versatility of S.E.C.O.

Let "The Man from Sun Oil" talk to you about S.E.C.O. and the many other superior Sun products, or write

**Sun Oil Company Limited, Industrial Products Department,
85 Bloor St. East, Toronto 5.**

DIVIDEND NOTICES

THE ONTARIO LOAN AND DEBENTURE COMPANY

Announcement to Shareholders

The Directors on 7th instant declared, from the earnings of 1959, an extra dividend to Shareholders of 2% (20 cents per share on the par value of $10.00) on the present paid up capital stock of the Company, payable on the 1st February, 1960, to Shareholders of record at the close of business on the 20th January, 1960.

F. E. A. McKELLAR,
Secretary.

London, Ontario,
7th January, 1960.

FEDERAL GRAIN LIMITED

DIVIDEND NOTICE

Notice is hereby given that a dividend of thirty-five cents (35c) per share on the $1.40 Cumulative Redeemable Preference Shares of the Company has been declared, payable on February 1, 1960, to shareholders of record at the close of business on January 19, 1960.

By Order of the Board,
A. R. STRACHAN,
Secretary.

Winnipeg, Manitoba,
January 4, 1960.

FEDERAL GRAIN LIMITED

NOTICE OF DIVIDENDS

Notice is hereby given that a dividend of thirty-five cents (35c) per share has been declared on the Class "A" and Class "B" Common Shares of Federal Grain Limited.

Notice is also hereby given that a special dividend of twenty-five cents (25c) per share has been declared on the said Common Shares.

The above dividends will be paid on February 1, 1960, to shareholders of record at the close of business on January 19, 1960.

By Order of the Board,
A. R. STRACHAN,
Secretary.

Winnipeg, Manitoba,
January 4, 1960.

NORTH STAR OIL LIMITED

DIVIDEND NOTICE

The Board of Directors declared today a quarterly dividend of 15c per share on the common shares of the Company, payable March 15, 1960, to shareholders of record February 16, 1960.

By Order of the Board:
ROBERT PATTERSON, C.A.,
Secretary-Treasurer.

Toronto, Ont.,
January 8, 1960.

WORLD WIDE BANKING
CHASE MANHATTAN
CHARTERED 1799
THE CHASE MANHATTAN BANK
NEW YORK, N.Y.

DIVIDEND NOTICE

The Chase Manhattan Bank has declared a dividend of 60c per share on the 15,167,000 shares of the capital stock of the Bank, payable February 11, 1960 to holders of record at the close of business January 15, 1960.

The transfer books will not be closed in connection with the payment of this dividend.

MORTIMER J. PALMER
Vice President and Secretary

ANNOUNCEMENT

PERSONNEL DIRECTOR

JOHN GIFFORD

Oakah L. Jones, Vice-President and General Manager, announces the appointment of J. M. Gifford as Personnel Director of The Consumers' Gas Company. After service in Northwest Europe during World War II, Mr. Gifford obtained broad experience in industrial relations in Canada, both in the manufacturing and construction industries.

Company Reports

Oil

PRAIRIE OIL ROYALTIES had a net profit of $43,778 in the year ended June 30, 1959 (net of $31,292 in the preceding year).

During the year a total of 47 new oil wells and one gas well were completed on acreage in which the company has royalty interests. Majority of the drilling was in the Midale-Weyburn area of Saskatchewan.

Prairie increased its holdings in **British Columbia Oil Lands** to 171,561 shares, carried at average cost of $3.31 per share.

In the first quarter of the current fiscal year, Prairie had an estimated net profit of $25,824, President John B. Aird states.

CHARTER OIL had a net loss of $341,369 in the year ended July 31, 1959 (net loss of $413,633 in the preceding fiscal year).

Major factor in the improved financial results was the reduction of $72,807, to $1,787, in the provision for estimated loss on investments and advances.

Crude oil sales dipped slightly to 66,284 bbl. (67,612 bbl. year before).

This year, Charter will participate in sale of natural gas for the first time, which should mean a boost to income. Sales are being made from the Jedney-Bubbles Creek area in northeastern B.C. where Charter has interests in 590,295 acres.

Charter retains its interest of 84,534 shares in **Northern Ontario Natural Gas Co.** In addition, Charter holds a 50% interest in **Magna Pipeline Co.**, which has made application to construct a natural gas pipeline from Vancouver to Vancouver Island. No decision has yet been announced on the application.

Charter Drilling Co., the wholly-owned contract driller, had gross income of $370,431 in the latest year, down from $544,014. Operations resulted in a net loss of $18,935 ($54,471 in preceding year).

ANNOUNCEMENT

BRITISH OXYGEN APPOINTMENT

C. MacLEOD PITTS

Following the recent annual general meeting of British Oxygen Canada Limited, Harold M. Turner, chairman of the board, announced the appointment of Clarence MacLeod Pitts, Ottawa, as a director of the company. Mr. Pitts is president, People's Gas Supply Company Limited, Ottawa. Incorporated in 1902, People's Gas is a pioneer Canadian company manufacturing and distributing compressed gas and supplies. Associated with the industry all his life, Mr. Pitts is a past president and director of both the Compressed Gas Association and the International Acetylene Association. He is a member of the Association of Professional Engineers of Ontario, and a life member of the Engineering Institute of Canada. He is well known for his church and fraternal activities.

Start Halifax Shopping Centre This Summer

Special Correspondence

HALIFAX — Construction will start this summer on a $9 million shopping centre in Halifax.

A project of **Webb & Knapp (Canada) Ltd.**, the centre will be completed early in 1962.

On a 28-acre site, it will offer 388,000 sq. ft. of selling area.

Major tenant will be **Eaton's of Canada** with 150,000 sq. ft. of firm selling space on three floors and provision for two additional stories.

Eaton's also is a prime tenant in Webb & Knapp's $10 million Wellington Square development in London, Ont., and company's $10 million Brentwood Park development in Burnaby, B.C.

Formal announcement of the Halifax centre will be made shortly.

'Seasonal Slack': Asbestos Corp. Closing Big Mine

MONTREAL (Staff) — At the end of this month, **Asbestos Corp.** —one of Quebec's big asbestos producers—will temporarily close down its King-Beaver mine and mill.

Suspension of operations is not expected to exceed six weeks, reports President and Managing Director A. L. Penhale.

Shutdown will affect about 400 workers, some of whom will be re-employed immediately by the company on mine stripping operations and other work.

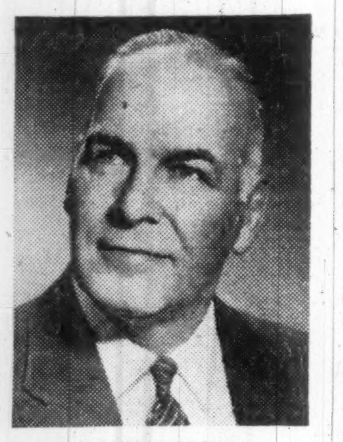
Shutdown was caused by seasonal slackening in shipments, due to close of the St. Lawrence River to shipping for the winter.

There still appears to be a world surplus of asbestos fibre production capacity. Demand, however, which was exceptionally slack in the earlier part of 1959, picked up toward the end of the year.

There is a good change that the improvement in demand in the latter part of 1959 will continue this year, company says.

ANNOUNCEMENT

VICE-PRESIDENT OF HIRAM WALKER



LORNE W. DUGUID

The election of Lorne W. Duguid as a Vice-President of Hiram Walker & Sons Limited has been announced by Howard R. Walton, President. Mr. Duguid joined the company as a Sales Representative in 1941, and in the ensuing years has held a variety of increasingly responsible posts. He was elected a Director in 1957, and appointed General Sales Manager for Canada in 1958.

Question:

How long will my stocks stay at this level?

Answer: Junior mining and oil stocks are on the verge of breaking out in a pre-spring rally—with the current decline in the senior averages accelerating the flow of investment capital into the speculative group. Matter of fact, Mitchell clients have made most of the money after the Dow Jones started to top off—with some of the gains ranging as high as 50 and 60 cents a share.

Question: How did the latest reaction affect your holdings?

Answer: It didn't. We could see it coming and we prepared for it. Last week, for example we told Mitchell clients to cash in a few of their bigger winners. Now, starting this week, we expect to begin looking around for places where to plow these profits back—keeping in mind we have to find stocks whose major advances are in the near term future.

Question: What are my chances of making money if I become a Mitchell client?

Answer: Very good. We feel we can show you how big profits are made by using a proven, professional approach to markets—an approach that takes into account the fact the market is simply a wholesale-retail operation wherein stocks are bought at low prices and sold at high prices by professional dealers—who operate in the same fashion that enables used car dealers to make millions of dollars annually in the used car business. A six week trial subscription may be the best investment you'll ever make. The cost is $5.00 and it includes a free copy of our revealing booklet: Making a Business of the Stock Market. Our address is:

MITCHELL OF CANADA INC.,
1420 GENESEE BLDG.,
BUFFALO 2, N.Y.

Here are clues to profit

A businessman's judgment is no better than his information. You can profit from Canada's bustling growth—as other businessmen do — through The Financial Post. Here is Canada's most comprehensive business news service. Every week, The Post helps you gauge the swing of business and investments. It helps you plan with confidence, make sound decisions. In brief, it helps you make more money because it helps you anticipate trends and developments across the nation. Yearly by mail in Canada $8; elsewhere $9 yearly.

ANNOUNCEMENT

SIMPSONS-SEARS APPOINTMENTS

G. F. TROTTER

R. C. SHAFFER

Mr. G. M. Graham, President of Simpsons-Sears Limited, announces the appointment of George F. Trotter as Administrative Vice-President. Mr. Trotter has been Vice-President — Retail Administration since the inception of the Company in 1953. He will be succeeded by Ralph C. Shaffer as Vice-President — Retail Administration. Mr. Shaffer has been Manager of the Ottawa Store since 1956.

Taking Stock

What's going on in the mining and oil markets — the facts and rumors.

By FRANK KAPLAN

Higher zinc prices stir interest despite new efforts to curb zinc sales to the U. S. (**FP**, Jan. 9).

Temporary confusion in the key and highly protected U. S. market is finally ended with a ½c lb. rise in the price of zinc to 13½c for prime western delivered New York. **Consolidated Mining & Smelting,** the big Canadian producer, follows with a ¼c rise to 13c lb.

The lowest U. S. smelter stocks since November, 1957, together with increased shipments and the end of the steel strike, are among factors brightening the outlook for zinc. Canadian mines report considerable interest for zinc concentrates from U. S. smelters despite the complaints against imports.

Here's how some zinc producers swing.

	Latest Price	Early Dec.	1959-60	
			High	Low
	$	$	$	$
Cons. Mining	19¼	19½	22⅝	17⅜
Hudson Bay	50½	49	64	47½
United Keno Hill	6.15	5.20	6.15	3.95
Normetal	3.50	3.25	4.50	3.00
Willroy	1.50	1.27	2.60	1.08
Geco	17½	16½	24½	15⅞

* * *

Brunswick Mining & Smelting, sitting on a large lead-zinc deposit in New Brunswick, stirs ahead to a top of $4.15 from a recent $2.80, then settles back to $3.90. Rumors circulate of efforts to buy out the controlling firm—**St. Joseph's Lead**—and to bring the property into production.

Anacon Lead, which also has interests in New Brunswick, edges ahead to 80c from 60c. **Jack Waite,** a U. S. firm with property in Idaho and Montana, is also higher in reflecting strong U. S. markets for lead and zinc. At 31c, Jack Waite has climbed from 20c late in December.

Rexspar Uranium turns active and higher as it climbs to 45c from around the 30c level. Company has a fluorspar-uranium property in B. C. and is reported turning its sights to chemical production. Former head of Montreal Stock Exchange becomes chairman.

* * *

A flurry of new financing deals by speculative mining issues could break out. The street grapevine says many "deals are on the verge" waiting only favorable market interest.

Recent financing by **Deer Horn Mines** raised speculation as to the possibility of a new pattern. E. H. Pooler & Co., a Toronto brokerage firm came up with the unique arrangement. It lent Deer Horn $150,000 at 6%, received in return a bonus of 75,000 shares and the right to convert the loan into 666,666 shares on the basis of 400,000 shares at 20c, 200,000 at 25c and 66,666 at 30c. Deer Horn trades at 26c, up 4c.

For a moment it looked as though a new financing technique had been worked out which might by-pass firm underwriting rules of the TSE. But, the loan deal was only permitted because Deer Horn has been shipping to a smelter and needed financing until smelter returns start in a few months. The same arrangements wouldn't be permitted where there was no income coming into a company, thus ruling out pretty well all penny prospects.

* * *

ON THE OIL AND GAS FRONT—prices tend easier in line with the rest of the market. Winter exploration season is just beginning to pick up steam with interest focused on northern British Columbia.

Canada Southern which recently made a major exploration deal with a Home Oil-Signal Oil group has been firming from around $4 to $5. This is on ground just north of the B.C. border.

West Canadian Oil turns active and ahead to $1.80 from a recent $1.30 level as buying interest is sparked by the first major wildcat of the season in the Milligan Creek area of northeastern B. C. This company has a large European following, with the former **Suez Canal Co.** (now **La Compagnie Financière de Suez**) interested.

Alberta Independent Plans 11 Wildcat Probes in '60

A total of 11 wildcat wells and at least eight development wells are expected to be drilled this year on land interests of **Crusade Petroleum Corp.**, R. Clive Brown, president, states in a report to shareholders.

This program will cost an estimated $1 million. Crusade, he reports, has acquired interests in about 1.8 million acres in Alberta and is one of the largest independent landholders in the industry.

Development wells will be drilled on crown reserve parcels which the company intends to acquire during the year.

The wildcat program involves:

- Two wells in the Caribou Mountain area where Crusade has a 35% interest in 1,020,000 acres of pooled reservation lands. Drilling should start by the end of January. There will be other major drilling activity in the area by **Home Oil, Union Oil of California, Ohio Oil, Pan American Petroleum** and **Tennessee Gas & Oil**, Mr. Brown says.
- **Two wildcats in the South Provost area** where the company has a 50% interest in 20,000 acres.
- **Two wells at East Cessford** where a 100% interest is held in 14,240 acres imediately east of the Buffalo-Atlee gas field.
- **Two wells at Oyen** where a 25% interest is held in 38,240 acres and two wells at Marwayne where a 25% interest is held in 78,589 acres. One wildcat is planned at Saddle Lake where the company has a 25% interest in 210,287 acres.

A deep well will start soon to test ground farmed out to **Canadian Oil Companies** at Senex Creek.

Crusade plans to concentrate on projects in the gas export area of Alberta since an expected favorable decision by Ottawa hearings on export of gas will help in sale and development of gas by the company, Mr. Brown says.

Weedon Hopes To Pay Creditors

Weedon Mining Corp. has filed a proposal under the Bankruptcy Act whereby all creditors would be paid in full.

Details of the proposal are not stated.

President Roy Robertson states that with present accounts receivable and continuing sale of inventory, there "seems no reasonable doubt" that creditors will be paid in full.

A cave-in and flooding of the bottom two levels forced suspension of the company's copper-pyrite mining operation at Weedon, Quebec, last November.

Approve Zulapa Capital Increase

Zulapa Mining Corp. received shareholder approval for an increase in authorized capital to five million shares.

The increase was aimed at providing the company with additional two million shares which it could use to raise funds in special situations.

At the meeting, President P. C. Nedham told shareholders that the company has recently acquired additional ground in northwestern Quebec.

New Pacific Reorganizes, Buys Steel Mill

New Pacific Coal & Oils has gone into the steel business.

Through purchase of a 250-ton per day merchant steel rolling mill, to be erected in southern California, Pacific will enter the business of converting steel scrap to reinforcing rods, angle iron, and other small shapes.

As result of the move, Pacific is going to ask shareholders to consider a reorganization to ease financing arrangements.

At a special meeting to be held Jan. 22, approval will be sought for:

- **Change in name to Consolidated New Pacific Ltd.**
- **Consolidation** on 1-for-5 basis of existing 7.5 million shares.
- **Creation of two million new shares** to bring total authorized capital to 3.5 million shares.

President F. E. Ruben states that the estimated cost of the mill and installation would be $2 million.

This would mean new financing arrangements, details of which are not expected until after the special meeting of shareholders.

The financing would be undertaken through **New Pacific Steel Rolling Mills Inc.**, a wholly-owned subsidiary formed to operate the mill.

ANNOUNCEMENT

AERONAUTICAL GROUP APPOINTMENTS

KENNETH W. BROWN

JOHN L. PLANT

BURTON A. AVERY

Mr. Harvey R. Smith, Executive Vice-President, Aeronautical, A. V. Roe Canada Limited, announces the appointment of Mr. Kenneth W. Brown to the position of Vice-President and General Manager of Avro Aircraft Limited. At the same time, Mr. Smith announces the appointments of Mr. John L. Plant as Vice-President and General Manager of Canadian Applied Research Limited, and Mr. Burton A. Avery as Vice-President and Assistant General Manager of Orenda Engines Limited. The three companies are members of the Aeronautical Group of A. V. Roe Canada Limited. Mr. Smith remains Chairman and President of the three companies.

In joining Avro's Management from that of the Boeing Airplane Company, Seattle, Wash., Mr. Brown is returning to Canada where he spent the five years of 1948-1953 in Montreal, in the Aviation industry. At Boeing, Mr. Brown served in various divisional management capacities, latterly as General Manager, Operations of the Company's Aero-Space Division that is responsible for the Boeing Bomarc Interceptor Missile, Minuteman Intercontinental Ballistic Missile and the Dyna-Soar Orbital Glide Vehicle.

Both Mr. Plant and Mr. Avery were associated with the Aeronautical Group of A. V. Roe Canada Limited prior to their new appointments. Mr. Plant was formerly the Chief of Staff, Allied Air Forces, Central Europe with the rank of Air Marshal, R.C.A.F. He was Air Officer Commanding, Air Materiel Command when he retired from the R.C.A.F. to enter industry. Mr. Avery, as Design Engineer and latterly, the Chief Engineer of Orenda Engines Limited, has actively participated in the development of Canada's Gas Turbine engine industry.

LUMBER MEET

Prime Minister Diefenbaker will be guest speaker at a Feb. 15 luncheon at the annual convention of the Canadian Lumbermen's Association in the Queen Elizabeth Hotel, Montreal, Feb. 15-17.

POWER

... 250,000 *more* H.P.
for New Brunswick

The first unit of a new 250,000 H.P. steam plant at East Saint John will begin production in July 1961.

The new plant, now under construction, closely follows the completion of the 90,000 H.P. Beechwood hydro development and will mean still more power for New Brunswick's industrial growth.

Whether your need is for expansion or decentralization, New Brunswick has many advantages to offer: dependable labour . . . attractive building sites . . . governmental cooperation and year-round shipping.

All this plus an abundance of economic power presents an inviting combination for new industry.

Quebec Gets Spotlight In Winter Mine Hunt

By ALEX WILSON

A steady flow of men and equipment is snaking through Canada's frozen north as mining exploration crews launch winter work.

In the few months when cold weather and heavy falls of snow mean easy access over winter roads across swamps and muskeg, diamond drills, shaft sinking equipment and other supplies are hustled into remote areas for new exploration programs.

But this year the countrywide pace of exploration is down. Emphasis is on another look at old camps this year.

Dampening the spirit of exploration men:

- **Tight money.**
- **Low metal prices.**
- **Poor weather,** which meant a late start.

Tight money has hit many of the smaller exploration teams. Result: Only the big companies with earnings available for exploration are able to field crews.

And weak base metal prices, showing only scattered signs of improvement dampen enthusiasm. Low prices mean that only high grade finds can spark much activity in new areas.

In many of the potential northern areas a warm fall delayed the start of exploration work. In the Mattagami area an early snowfall, before the ground was frozen, meant delays before winter ice roads could be built up.

Although activity is spotty across the country, northwestern Quebec is still bustling.

Hottest camp this winter is the Mattagami area about 120 mi. northwest of the Chibougamau copper camp and 400 mi. north of Montreal.

In the past two weeks drills have started churning again on many of the copper and zinc deposits. **New Hosco, Orchan, Mattagami Lake** and **Radiore** are all drilling. Others in the area are getting set to probe geophysical indications. **Ventures** is going to drill the property optioned from **Bracemac** and **Iso Uranium** plans to drill a new property.

But the highlight of Mattagami activity is the important decision of Mattagami Lake Mines to go underground. Company officials are now rushing plans and preparations to get sinking under way this spring.

Other areas in northwestern Quebec that were hot spots last year — Frotet Lake and Kesagami areas — are dormant this winter.

Elsewhere in the province there is a bustling of activity in the old camps, as teams probe the ground once again with new tools and ideas.

One of the busiest camps is Noranda-Rouyn. Several companies have moved into the area just north of the rich Horne Mine of **Noranda Mines. Consolidated Vauze,** backed by U. K. capital has started shaftsinking. The interests that have been quietly working in the area over recent months are getting set to expand their programs.

To the east, in the Chibougamau camp, **Portage Island Mines** is ready to go underground on its copper deposit and **Copper Rand** has started tuneup of its mill.

Northwest of Chibougamau, **Rio Tinto** and **Prospector's Airways** are working on copper indications in Poirier and Joutel townships.

The old gold camps in Ontario are in for their share of reworking too. The huge Porcupine gold area is the centre of a search for copper and nickel.

Just northwest of the camp, in the Kamiskotia Lake area, **Violamac Mines** and associates are drilling a copper bet.

Also in the Timmins area, **Fatima Mining** is going underground in its bid to prove its nickel deposit in Bartlett and Geicke townships. Shaft sinking is under way.

Underground work is feature of exploration in the Red Lake gold camp too. Both **H. G. Young Mines** and **Wilmar Mines** are being probed by underground lateral work. **Cochemour Willans** is extending its workings into the former **Martin McNeely** property, now held by Wilmar, and results are expected to start coming by spring.

H. G. Young has reached the ore on the three levels from its 750 ft. shaft completed last year.

Elsewhere in Canada's mining provinces winter has stifled activity.

Followup work on last summer's tungsten and gold finds in the NWT will have to wait. And exploration men have left the Rocky Mountains in B. C.

In the Maritimes, limited work is under way, although the area shows no signs of regaining the lustre of its heyday in the mid 1950's.

Dome Mines, Moneta Porcupine, Conwest Explorations American Metal and **Dominion Explorers** are reported working.

Advocate Asbestos has decided to push development work on its Newfoundland property through the winter. And **O'Brien Gold Mines** will continue exploration on the **Atlantic Coast Copper** ground.

On a company by company basis, plans for exploration this year are spotty. Many of the smaller companies are ruled out as they are unable to raise funds through underwriting.

Others report stepped up activity.

Area mines started this year with more projects on its books than at any other time.

Dominion Explorers plans to keep at least as busy as last year as it probes for oil possibilities in the Arctic Islands, and base metal possibilities in the Maritimes.

Most of the large companies are expected to maintain last year's pace. Leader among the giants is **International Nickel,** which spends over $500,000 annually. McIntyre, Ventures, Noranda and Rio Tinto follow close on its heels. But none of the giants like to talk about their work, except in vague terms, for fear of tipping their hands.

Creditors Will Stop Stanrock Loan Interest

Stanrock Uranium Mines, already in receivership (**FP**, May 30), will likely go into bankruptcy next week.

A court order granting a petition by a group of unsecured creditors is expected shortly.

This move by the creditors, who have claims of $3½-$4 million, is designed to:

- **Give official status before** the court and representation in the event of any reorganization or sale of control of Stanrock which might be planned by the company or its bondholders.
- **Stop accumulation of interest** on a $1,250,000 loan made by a U. S. group. Company received only $1 million, but agreed to repay $250,000 more than that. Interest was accumulating at the rate of 2½% a month.

Stanrock will continue to operate its uranium mine (**FP**, Jan. 9) and position of bondholders' claims is not affected. Stanrock has cleared its bank debt.

Principal claimants are first the bondholders, followed by secured creditors and then by the unsecured creditors who rank equally with the holders of the U. S. loan.

Montreal Trust Co. has been receiver-manager and **Clarkson Co.** is expected to be named trustee.

MANAGEMENT COURSE

The sixth management course in industrial relations and personnel administration — sponsored by **Industrial Relations Counselors Service Inc.** — is scheduled for Feb. 8-13 in the Sheraton-Brock Hotel, Niagara Falls, Ont. The course is designed for middle and upper management operating personnel and staff counterparts and will emphasize reappraising industrial relations objectives and practices.

Mattagami Lake Mines Hustles to Sink Shaft

Signs of new pep for Northwestern Quebec's Mattagami Lake base metal camp—already the hottest exploration camp in the country — appeared this week.

Mattagami Lake Mines has decided to start underground exploration of its large zinc orebody, President J. D. Barrington told **FP**.

The move could result in:

- **Long-awaited decision** of the Quebec government on an all-weather road to the camp.
- **A rush** by other companies to make underground probes.

There are a few hurdles to be cleared by Mattagami before it can get started sinking a shaft to 1,000 ft. depth.

It is only now putting the finishing touches on a management reorganization.

The changes result from decision of the development group — **Noranda Mines, McIntyre Porcupine Mines,** and **Canadian Exploration**—to exercise its underwriting option on Mattagami Lake Mines. This gave the group control of the company.

The new management team, headed by Mr. Barrington, president of McIntyre, is rushing plans and preparations for a spring start on shaft sinking.

Main problem is arrangement for necessary equipment and supplies. The heavy equipment must be moved in over the 120-mile winter road from Chibougamau before spring break-up. Any delays in getting the equipment rounded up could mean a postponement in the start on the shaft.

At present there is no ground transportation into the camp during the summer.

The Quebec government still has not committed itself on the possibility of an all-weather road. It is believed waiting on Mattagami Lake's production decision that is to be made by Dec. 1, this year.

But the decision to take the all-important first step by going underground could spark an earlier decision on the road.

Plans of several other companies hinge on the construction of the road (**FP**, Nov. 14).

New Hosco Mines, and **Orchan Mines** are both ready to go underground to probe their drill-indicated deposits. And **Radiore Mines** is also believed nearly ready.

Rio Tinto Group Maintains Output Through Winter

It's status quo for the Rio Tinto group of uranium mines for at least three months.

Robert Winters, president of **Rio Tinto Mining Co. of Canada,** reports continuing efforts to work out a stretch-out arrangement including unsuccessful bids (so far) for additional contracts.

Meanwhile, the uranium mines of **Algom, Milliken Lake, Northspan** and **Pronto** will continue production at present levels up to March 31, 1960, assuring stability through the winter.

CAMPBELL OUTFIT

In the final quarter of 1959, **Campbell Red Lake Mines** turned out gold bullion to value of $1,356,401. A total of 63,768 tons of ore were milled during the period. In the same quarter of 1958, output totaled $1,262,056.

THE SHAPE OF THINGS TO COME...

Every day sees more and more applications of Aluminum Extruded Shapes to the products of industry...and small wonder. The almost unbelievable versatility and durability of this truly amazing metal make it ideal for fabrication into sections where problems of weight, shape or size limitations are of prime importance. These plus many other desirable features like ease of maintenance, relatively low cost and proven efficency have earned for Aluminum Extrusions a place of high and ready acceptance in the minds of production men everywhere. We would like to discuss it further with you.

How Winnipeg Metro Scheme Will Operate

By LEONARD F. EARL

WINNIPEG—With municipalities of the metropolitan area unable to agree, the Manitoba government will undertake to set up a form of Metro government for Greater Winnipeg.

Facing possible criticism if it intervened and equally as much if it didn't, the provincial government has decided to act.

A Metro bill, to be piloted by newly appointed municipal affairs minister Maurice Ridley, will be the longest and one of the major pieces of legislation at the forthcoming session.

The House opens Jan. 19.

While details of the bill will not be disclosed until it is tabled, **as a start the government will ditch the eight-city plan recommended by the Greater Winnipeg Investigating Commission which, after a three-year enquiry, issued its report last March.**

The commission proposed drastic changes in municipal boundaries to give Greater Winnipeg a metro council composed of mayors of eight incorporated cities with a six-member board of control elected from wards of the newly defined cities.

The legislation involves no present change in municipal boundaries or school administration.

But as it will be introduced, or by subsequent amendments, it will clear the road for ultimate and complete merger of the city of Winnipeg and all or parts of some 18 suburbs, the amalgamation not effective immediately but possible over a period of years.

In other words, it will be by stages. The first two years will be largely planning in which some services will be consolidated under one authority.

Initially there will be set up a Metro council of 14 or 15 members with a chairman appointed by the government, the other members elected by the municipalities.

Before the bill is introduced Mr. Ridley will attempt to get the municipalities to hold their annual elections on the same date as Winnipeg, now the fourth Wednesday in October.

With this change, which will not be compulsory, one set of election officials can handle election of their respective mayors and councils and also the election by each municipality of its representative on the Metro council.

Agreement on this would require a change in the election date for eight municipalities some of which will be wholly included in the Metro territory, others only in part.

In St. Boniface a charter amendment would be necessary. The government will not insist that they change their municipal election date but it will insist that voting for election of members of the Metro council be on the same date.

The Metro council is to be elected for a four-year period. It will not officially function until 1961.

Its operation costs will be relatively small but in any case will be financed by a special tax, apportioned in ratio to the equalized assessment of each municipality, each council imposing a levy on its ratepayers to raise its share.

Early in 1961 the new council can have ready the schedule of services to be consolidated and the order in which they will be merged under one authority.

Some will likely be amalgamated quickly, those on which disagreement is unlikely, such as parks administration, the Greater Winnipeg Water District, the Great Winnipeg Sanitary District, the Mosquito Abatement Board, the Metropolitan Civil Defence Board and the Industrial Development Board. Some are already administered by central boards.

In succeeding years more important services such as welfare, building regulations, zoning, control of arterial traffic routes, and finally health, magistrates' courts, police and fire protection will be taken over by a Metro authority.

Some local services for the time being, such as street maintenance, traffic control, and garbage collection, will be left with the individual municipalities.

Once the merger of services is completed which is expected within the four-year term of the proposed Metro council, the council will be replaced by a larger elected central council of perhaps 24 members which will have complete control of all municipal services in the metropolitan area.

There will be no referendum either in 1960 or later, unless something in the meantime induces the government to change its decision.

It is setting up a Metro authority by legislation and is unlikely to change its mind.

Within the four-year term of the first Metro council to be elected in 1960 municipalities may have abandoned some of the objections they have been raising.

At the moment only Winnipeg and the adjoining village of Brooklands have supported complete amalgamation.

Some of the other municipalities which have not supported it have taken the position they are not necessarily opposed but for the present are not sure.

Imperial Oil To Drill Again In Cape Breton

Special Correspondence

SYDNEY, N.S. — **Imperial Oil Ltd.'s** first search for oil in Cape Breton has ended in failure.

Imperial Mabou No. 1 has been closed out at 5,145 ft. and the drilling rig moved to another location called Imperial Port Hood No. 1.

The site is in the Lake Ainslie area, south of Inverness, where preliminary exploration work was done on some 280,000 acres about three years ago.

The region has had an intermittent but unrewarding interest for oil men since 1864 when two unsuccessful wells were drilled.

Further shallow wells were drilled early in the century but they were too shallow to provide an adequate test of Cape Breton's possibilities.

Port Hood No. 1 represents the only Imperial Oil drilling activity in the Maritimes.

All work has been suspended in Prince Edward Island where three wells were abandoned between July 2 and Dec. 31, 1958. Five New Brunswick wells were abandoned last year between Jan. 19 and Oct. 1.

Once Doomed as a Ghost Town Snow Lake Finds New Wealth

From Our Own Correspondent

WINNIPEG — The northern town of Snow Lake (population 700), which seemed likely a few years ago to become a ghost town, starts the 1960s in a mood of healthy expansion.

When the gold mine on which it was founded was abandoned by **Britannia Mining Co.** the population thought the town was through.

Discovery of close-by valuable zinc and copper deposits by **Hudson Bay Mining and Smelting Co.** restored hope.

The company started developing the deposits and Snow Lake revived.

The townsite has to be enlarged.

The province has made an agreement with the mining company to sell it a new subdivision of 44 lots at $250 each.

The company agrees to build streets and lanes, install water and sewer, and build homes within two years.

In the meantime, if families can't find a place to live, Snow Lake will have a trailer court.

By government order Snow Lake now comes under the province's Town Planning Scheme.

Salaries of resident administrators will be paid wholly by the province.

The change affects Thompson where salary of the resident administrator, a former employee of an **International Nickel Co.** subsidiary, has been paid half by the province, half by the company.

Manitoba, Despite Weather, Has Good Production Year

From Our Own Correspondent

WINNIPEG—In spite of October weather, which left nearly 20 million bu. of unthreshed grain in fields, 1959 was a good production year for Manitoba farmers.

For some growers of sugar beets and other special crops, and for some grain farmers, losses were disastrous.

But for the whole province, preliminary figures of the provincial department of agriculture show the dollar value of gross farm production is about the same as the $320 million in 1958.

The estimate assumes that much of the unthreshed crop will be salvaged next spring.

Estimates for 1959 compared with 1958:

	1959	1958
	('000)	
	$	$
Field crops	174,688	167,307
Farm animals	70,075	76,030
Dairy products	34,000	33,821
Garden products	9,000	9,000
Poultry products	27,861	28,725
Fur farming	3,600	3,600
Clover and grass seed	550	566
Honey and wax	766	812
Wool	146	127
	$320,688	$319,988

With the exception of barley, the 1959 field crops, had they all been saved, would have had a higher dollar value than 1958.

Wheat was up about two million bushels. Oats, flax and mixed grains were each up about one million.

Barley yield was down to 35 million bu. from 44 million bu. in 1958, mainly because poor growing conditions in early part of the season retarded the crop.

Spring conditions in 1960 should be the reverse.

The subsoil was well saturated at time of 1959 freeze-up. Moisture conditions for start of the coming crop year are exceptionally favorable.

The net position of farmers in 1959 may not be so good as in 1958, partly because of increase in costs of operation.

But 1959 average net production of Manitoba farms, on basis of 49,000 farms, will be close to the best year since 1952.

Last year the net per farm was $5,398, highest of any in the 1952-58 period.

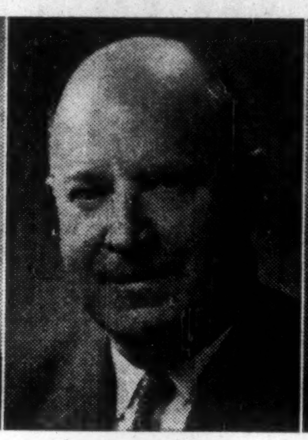
ONTARIO MAPS

The Ontario Department of Mines has issued preliminary maps of the townships of German, Stock, and Taylor in the Porcupine area of northeastern Ontario.

ANNOUNCEMENT

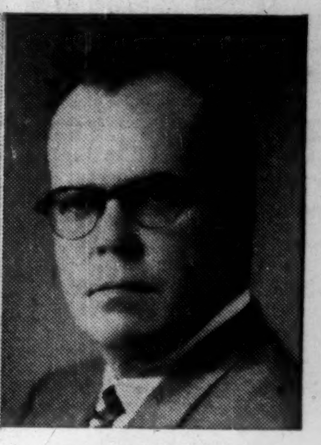
FURNESS LINE CHANGES IN MANAGEMENT

P. V. O. EVANS



F. G. HATCHER

V. S. NORTHROP



E. A. ROUND

E. P. Rees, C.M.G., M.C., Director, Furness, Withy & Company Limited, has announced the following changes which became effective on January 1st, 1960.

The managers of the company's offices in Montreal, Halifax and Saint John, N.B., J. D. McCluskey, W. O. Barnstead and L. L. Harrison, respectively, retired on December 31st, 1959 and are succeeded by P. V. O. Evans in Montreal, F. G. Hatcher in Halifax and V. S. Northrop in Saint John.

J. D. McCluskey has spent his whole business life with Furness, Withy, having joined the company in Saint John, N.B. in 1910. He was later transferred to Montreal, became assistant manager in 1941 and manager in 1957. During the last war he was principal representative in Canada for the British Timber Control Board and was responsible for the movement of over 300 billion feet of west coast lumber which was railed overland for loading at Eastern Canadian and U. S. ports.

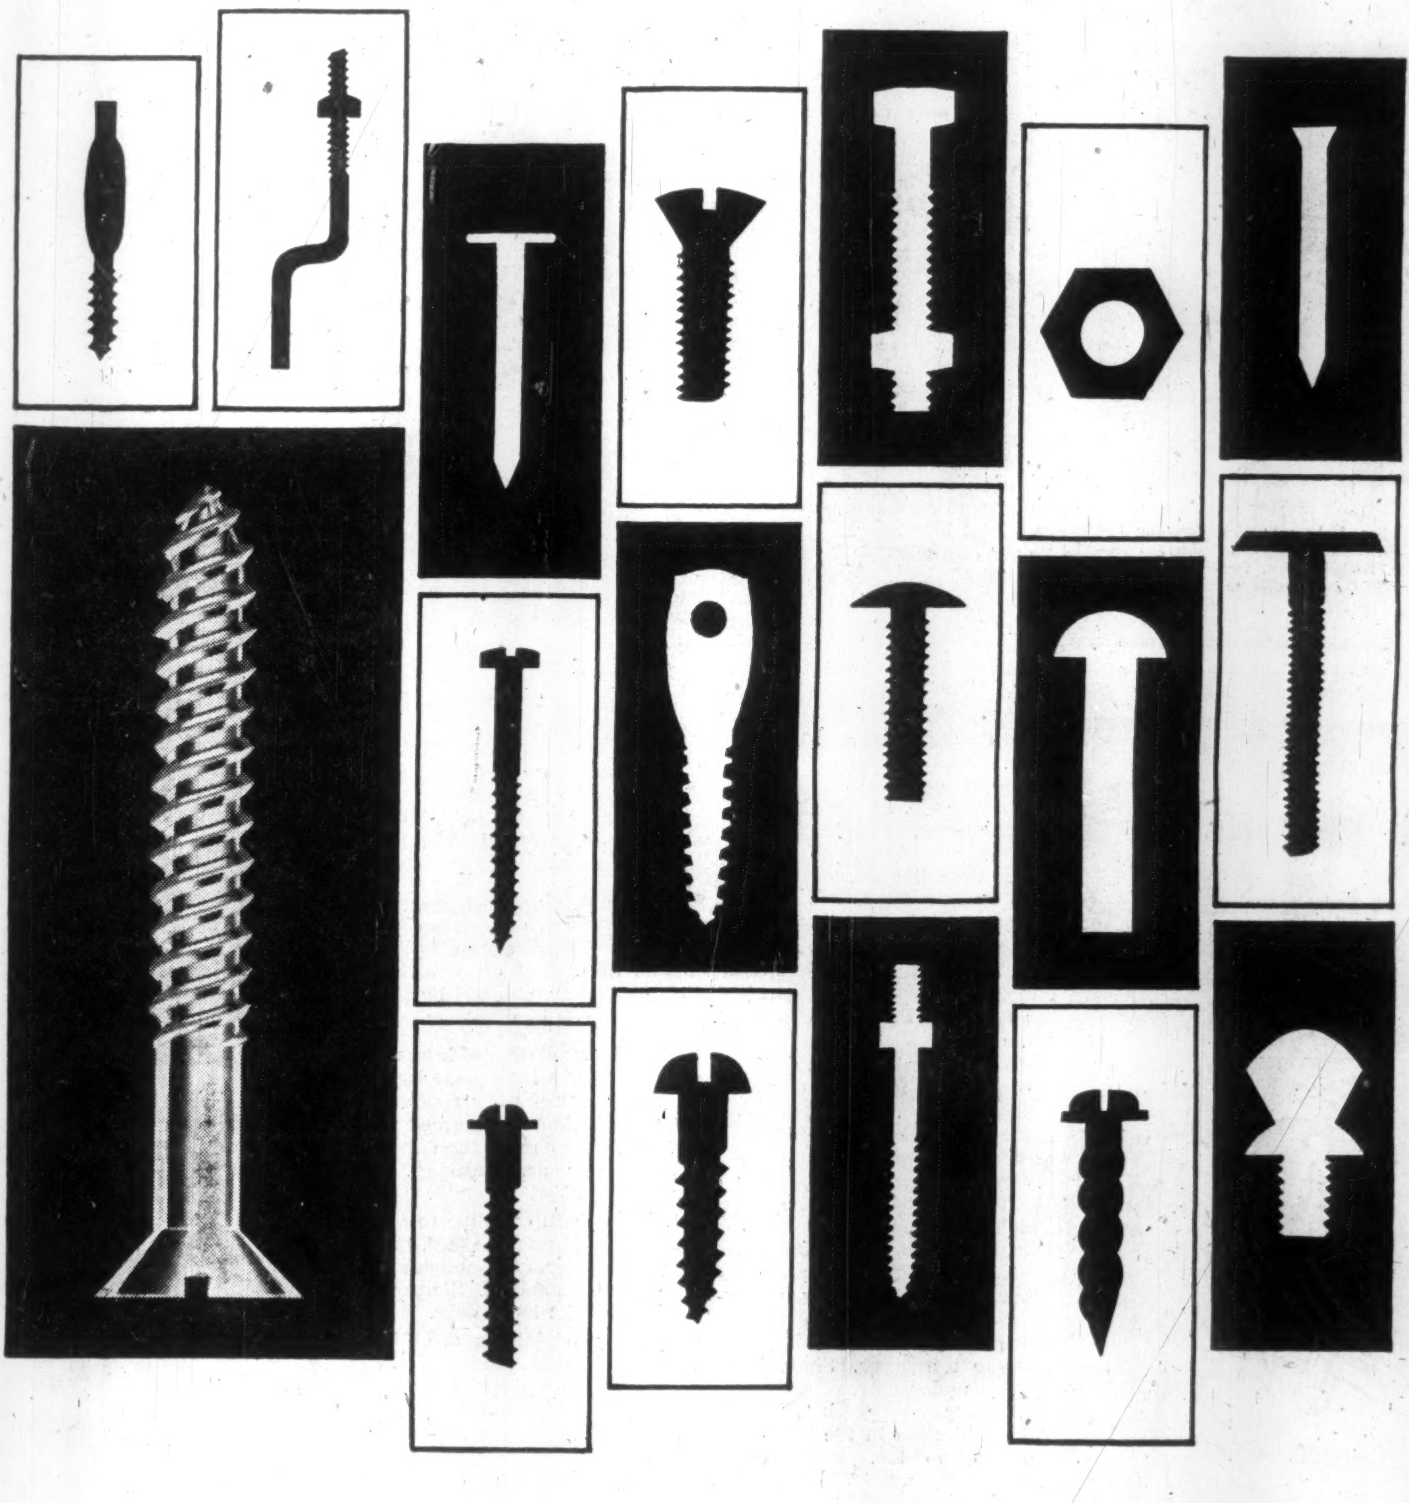
P. V. O. Evans, who succeeds McCluskey, joined the firm in Cardiff, Wales, in 1929, subsequently gaining experience in the company's offices in New York, Portland, Me., Seattle, San Francisco and Vancouver, having been manager of the last-named office from 1945 to 1957 when he was appointed assistant manager in Montreal.

W. O. Barnstead joined the firm in Halifax in 1909 and, with the exception of the years from 1914-18 when he was overseas, has been in Halifax office ever since. He was appointed assistant manager in 1949 and manager in 1951. He was Swedish Consul from 1951 to 1958, a member of the Halifax Port Commission, the Counsel of the Board of Trade and the Halifax Steamship Committee, of which he was chairman for several years.

His successor, F. G. Hatcher, joined the company in 1920 and has been in the Halifax office since the start of his career, having been assistant manager since 1951. He was appointed Swedish Consul on January 1st, 1959.

L. L. Harrison followed his father into the firm, joining the Dock Staff in Buenos Aires after receiving his discharge from the R.C.A. at the end of the Great War. He transferred to Montreal in 1921 and went to Portland, Me., in 1939 to reopen the company's office there as manager and to serve as local representative of the British Ministry of War Transport. He was appointed manager in Saint John, N.B. in 1949.

V. S. Northrop, who succeeds him, is a native of Saint John where he became a member of the staff in 1926. He was subsequently transferred to Montreal and became import freight manager in 1940. He will be succeeded as import freight manager in Montreal by E. A. Round, a native of Montreal, who has been his assistant since 1940 and who joined the firm in 1927.



DOSCO DOES IT...

makes steel products of many kinds including a complete range of Fasteners...

DOSCO produces screws, nuts, bolts, rivets, spikes, threaded rods and rock anchor bolts. In addition to standard sizes, DOSCO make a host of special fasteners designed to meet customers' individual requirements.

DOSCO

DOMINION STEEL AND COAL CORPORATION, LIMITED

MEMBER OF THE A. V. ROE CANADA GROUP

STEEL MAKING: ingots, blooms, billets, rails, angles, bars

FABRICATED STEEL PRODUCTS: forgings, bolts, screws, wire, nails, reinforcing bars, pipe, wire mesh, fencing

MINING: iron ore, limestone, coal

STEEL STRUCTURES: bridges, buildings, towers, ships and ship repairs, railway cars, machinery, etc.
